

Report on 2011 SCORE Programs

A summary of recycling and waste management in Minnesota

Minnesota Pollution Control Agency

December 2012

Legislative Charge

In 1989, the Legislature adopted comprehensive waste reduction and recycling legislation based on recommendations of the Governor's Select Committee on Recycling and the Environment (SCORE). This set of laws, Minn. Stat. § 115A.551-115A.557, commonly referred to as SCORE, initiated a stable source of state funding for recycling programs, as well as waste reduction and the improved management of household hazardous wastes, yard waste, and problem materials. SCORE legislation provides grant dollars, along with funding to counties and local government for long-term flexible programs.

Summary Report

In 1989, the Governor's Select Committee on Recycling and the Environment (SCORE) recommended to the Legislature to adopt a comprehensive set of laws, commonly referred to as SCORE. This act initiated a state funding source for recycling programs, as well as waste reduction, management of household hazardous wastes, and problem materials. SCORE legislation and grant dollars, along with funding from counties and local government, provide the basis for long-term, flexible programs.

This *Report on 2011 SCORE Programs* summarizes information submitted by all 87 counties and the Western Lake Superior Sanitary District on waste management efforts, including waste reduction activities, recycling, composting, household hazardous waste programs, problem materials collection, and waste processing and disposal. The report and information on SCORE programs are available at <http://www.pca.state.mn.us/score>.

MSW generation in Minnesota

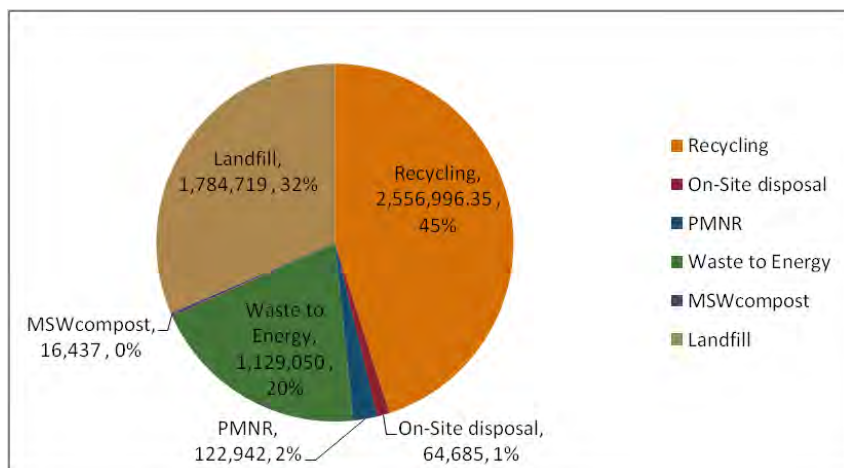

Mixed municipal solid waste (MSW) is defined by statute as garbage, refuse, and other solid waste from residential, commercial, industrial, and community activities that the generator of the waste aggregates for collection. It includes common materials found in household and commercial garbage, such as packaging materials, containers, food discards, and other compostable materials, plastic, paper, etc.

Municipal solid waste does not include auto hulks, street sweepings, ash, construction debris, mining waste, sludge, tree and agricultural wastes, tires, lead acid batteries, motor and vehicle fluids and filters, and other materials collected, processed, and disposed of as separate waste streams (Minn. Stat. § 115A.03, subd. 21).

Municipal solid waste includes wastes recycled and discarded (including tons sent to disposal and resource recovery facilities), tons disposed of on-site (burn barrels or farm dumps), and problem materials not recycled (PMNR).

Minnesota's MSW generation totaled 5,674,829 tons in 2011, an increase of 3 percent from 2010. The seven Metro counties generate 56 percent of the waste, with the greater Minnesota counties generating the remaining 44 percent.

Figure 1. Total MSW generation in Minnesota

Per capita MSW generation

In 2011 waste generation shows a slight increase after three consecutive years of decreased generation. This is likely due to the recent improvements in the economy as waste generation historically has increased when the economy is good, and decreased when it is in decline. In 2011, the Minnesota per capita rate increased insignificantly to 1.064 tons per person (2,129 pounds/person/year) from 1.062 tons per person in 2010, or by a quarter of one percent increase.

In 2011, Minnesota's population increased by only 0.5 percent from 2010 to 5,332,246, an increase of only 28,321 people.

On-site disposal and problem materials not recycled

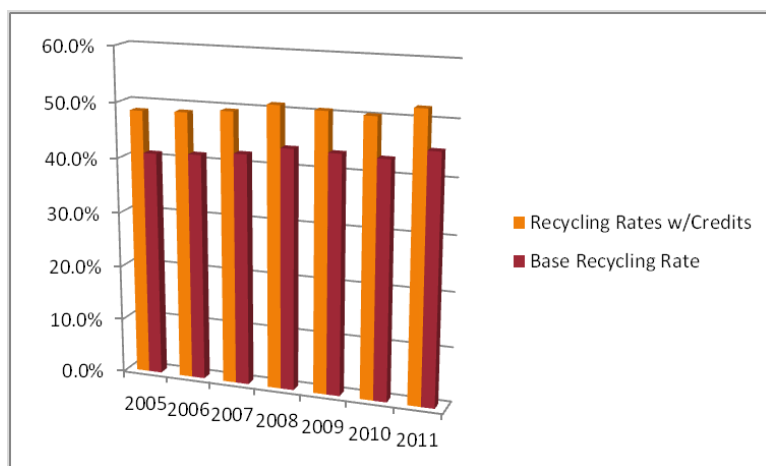

On-site disposal of MSW, either burning or burying, has been an ongoing practice for many years. Although it is against the law for most people, some farmers are still allowed to burn or bury household garbage under existing Minn. Stat. §§17.135. However, it should be noted that nearly all materials found in modern garbage are considered prohibited materials (Minn. Stat. 88.171) and as a result, are illegal to burn for all Minnesotans regardless of the farmer exemption found in Minn. Stat. 17.135.

In the 2011 SCORE survey, counties reported a decrease in population disposing of their waste on-site. In 2011 an estimated 64,685 tons of waste disposed of on-site, or one percent of the total MSW generated. This decline can be attributed to a raised awareness due to education from the MPCA's Burn Barrel Reduction Campaign and additional investment by county educational programs. For a more comprehensive look at garbage burning estimates for the state and other burn barrel reduction resources, go to www.pca.state.mn.us/burnbarrel.

Problem materials not recycled makes up two percent of the total MSW generation or 122,942 tons for 2011. Problem materials not recycled include five materials banned from disposal in Minnesota (vehicle batteries, tires, major appliances, motor oil, and oil filters).

Recycling and waste reduction

Figure 2. Minnesota's recycling progress

Minnesota's recycling rate is only made up of materials that are separated from mixed municipal solid waste for the purpose of recycling. The definition of recycling in Minnesota is "...the process of collecting and preparing recyclable materials and reusing the materials in their original form or using them in manufacturing process that does not cause the destruction or precludes further use." (Minn. Stat. 115A.03, subd. 25b.)

There are other beneficial reuses and recycling of materials taking place (e.g. asphalt shingle recycling) that are not included here because SCORE is only a measurement of mixed MSW recycling. See more on asphalt shingle recycling at <http://www.pca.state.mn.us/index.php/topics/preventing-waste-and-pollution/recycling/recycling-market-development/recycled-market-development-innovations/recycling-asphalt-shingles.html>

As a national leader, Minnesota's recycling rate reflects strong local and state investment, and good public participation. In 2011, 2,556,996 tons of materials were recycled, or 45.1 percent (base recycling rate) of the total MSW generated. When credits for yard waste and waste reduction efforts are included, the recycling rate increases to 52.1 percent. The base recycling rate is a more accurate measure of progress as it is the actual percentage of materials recycled.

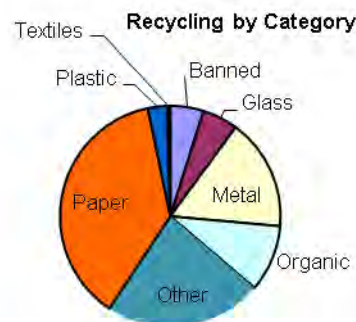

Table 1. Material types recycled in tons

Banned	124,539.56
Glass	133,220.74
Metal	417,610.58
Organic	249,948.56

This growth reflects the significant investment in our recycling system, and strong material markets. However, evidence confirms much more could be done to recover millions of tons of discarded recyclable and organic materials still disposed of each year.

Recycling tonnages increased 5.2 percent from 2010. In 2011, 67.5 percent of the reported recycling tonnages is documented, as either residential; documented commercial/industrial/institutional; and mechanical/hand separated. The remaining 32.5 percent is estimated commercial/industrial/institutional recycling.

2011 continued to show the grades of textiles with the largest decrease, 22 percent, and organics and plastics increasing 26 and 14 percent, respectively, from 2010's reported tonnages.

The 2011 SCORE report will be the last to show a recycling rate with source reduction and yard waste credits. During the 2012 Legislative session, the credits for yard waste and source reduction were removed from Minn. Stat. 115A.551. The credits were removed as part of the SCORE revision process to report documented numbers rather than relying upon estimates.

Economic and environmental benefits of recycling

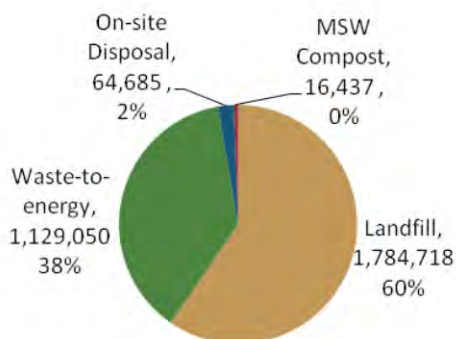

Recycling supports jobs and promotes economic activities, contributing to Minnesota's economic health. Recycling has supported almost 37,000 jobs and generated approximately \$8.5 billion in economic activity. Minnesota recycled enough materials to conserve over 5 million trees, saving enough energy to power all the homes in Ramsey County for one year, and reduce greenhouse gases equivalent to taking more than 1.3 million cars off the road. For more information:

<http://www.pca.state.mn.us/index.php/about-mpca/mpca-news/featured-stories/recycling-supports-our-economy.html>

MSW processing and disposal

In Minnesota, waste is managed through four main disposal methods: landfills, MSW composting, resource recovery facilities, and on-site disposal. In 2011, processed or disposed MSW totaled over 3 million tons.

Figure 3. MSW disposal

Landfill	60%
Waste-to-energy	38%

The amount of MSW processed and disposed decreased in 2011, by 84,000 tons, or 3 percent.

In 2011, 65 percent of the amount of total waste was diverted from landfilling by using management practices higher on the hierarchy; recycling, composting of food waste, and resource recovery methods

Of the amount of MSW processed and disposed of, the amount processed at resource recovery facilities increased approximately 93,000 tons or 1 percent. Corresponding to the resource recovery increase, the amount landfilled decreased 173,000 tons or by 1 percent.

The amount of waste leaving Minnesota continued to decrease; in 2011, 341,538 tons of waste was sent to Iowa, Wisconsin, North Dakota, and South Dakota. This is a drop of 10 percent from 2010, or approximately 40,000 tons. The amount of waste sent from Minnesota to Iowa was the most significant decrease by approximately 15,000 tons. However, the state of Wisconsin receives over 50 percent of the waste that leaves Minnesota, with a small amount being processed at the NRG French Island Waste To Energy (WTE) Facility, located in Lacrosse, Wisconsin.

Iowa	Landfill	83,251 tons
North Dakota	Landfill	71,763 tons

South Dakota	Landfill	2,702 tons
Wisconsin	Landfill	172,797 tons
Wisconsin	WTE	11,025 tons

Funding of SCORE programs

In 2011, a total of \$61.9 million was spent on SCORE activities by counties and cities. State disbursements totaled \$14.3 million dollars, which is approximately 23 percent of the amount spent on SCORE-related programs in total by the counties. In 2011, county funds continued to exceed this match, spending more than \$47.7 million or 77 percent of the amount spent toward SCORE-related activities.

This investment is in addition to undocumented dollars spent by other local units of government, such as cities and townships, on programs such as recycling, household hazardous waste collection, and waste education.

Money from the state is passed on to the county level in the form of annual block grants. Each county is required to match the funding from the Legislature with a local contribution of at least 25 percent.

Inflation, poor economy, and recycling markets have affected the counties' recycling programs. Counties continue to deal with these challenges and growing costs of collecting materials and delivering them to markets. SCORE funds have not kept up with inflation or increased demands made of the counties to operate their existing SCORE programs, and as a result, they are hard pressed to expand their programs.

Composition studies conducted by WTE facilities and at schools confirm that millions of tons of recyclable materials remain in the waste stream which creates missed economic and environmental opportunities for Minnesota. For more information on the economic impacts and benefits of recycling in Minnesota, go to <http://www.pca.state.mn.us/pyri790>.

The *2011 Solid Waste Policy Report*, (<http://www.pca.state.mn.us/index.php/waste/waste-and-cleanup/waste-management/solid-waste/integrated-solid-waste-management/solid-waste-policy-reports/2011-solid-waste-policy-report.html>) summarizes the current status of solid waste management in Minnesota. Additional information on materials management and value of collected and processed recyclable materials can be read by going to *Sustainable Materials Management: The Road Ahead* (US, EPA): <http://www.epa.gov/epawaste/conserve/smm/pdf/vision2.pdf>.
