Notice of availability and request for comments on draft Mississippi River - La Crescent Area Watershed Restoration and Protection Strategies (WRAPS) Total Maximum Daily Load (TMDL) Reports

General information

Public comment period begins: June 1, 2020
Public comment period ends: 4:30 p.m. on July 1, 2020

MPCA contact person:
Emily Zanon
Watershed Division
Minnesota Pollution Control Agency
18 Woodlake Dr SE
Rochester, MN  55904-6250
Phone:  507-206-2613
Email: emily.zanon@state.mn.us
File manager phone:  651-757-2728 or 844-828-0942

Draft reports for the Mississippi River - La Crescent Area Watershed are available for review on the Minnesota Pollution Control Agency (MPCA) draft/public noticed TMDL and WRAPS webpage at https://www.pca.state.mn.us/water/total-maximum-daily-load-tmdl-projects or at the MPCA office address listed under the MPCA contact person above. Following the comment period, the MPCA will revise the reports and submit the final TMDL to the U.S. Environmental Protection Agency (EPA) for approval. Comments, petitions, and other requests must be received at the MPCA in writing on or before the public comment period end date and time identified above.

Watershed: 07040006 Mississippi River - La Crescent Area Major Watershed

Description of the Mississippi River - La Crescent Area WRAPS and TMDL Reports

The Mississippi River – La Crescent Area Watershed is located in northeast Houston County and southeast Winona County. The watershed drains 95 square miles and includes a collection of tributaries that flow directly to the Mississippi River. Forested acres cover a majority (46.3%) of the watershed landscape, followed by pastureland (23.4%) and cultivated acres (3.4%). Located entirely in the Driftless Area, the Mississippi River – La Crescent Area Watershed is known for its karst features and coldwater streams.

Required by the federal Clean Water Act, a TMDL is a scientific study, conducted on waters assessed to be impaired, that calculates the maximum amount of a pollutant that a waterbody can receive and still meet water quality standards for that pollutant. The TMDL study is a process that identifies the sources of the pollutant causing an impairment and quantifies necessary reductions among the sources.

The WRAPS report is required by the state Clean Water Legacy Act and uses TMDL and other information to develop strategies for addressing point and nonpoint pollution sources. The objective of the WRAPS process is to develop strategies that not only restore impaired waters, but also protect the unimpaired waters from degradation. This report is a collaborative effort between the MPCA, other state agencies, local government partners, and other stakeholders.

Water quality data for five stream segments were examined and compared against water quality standards. Of the five stream segments assessed, one indicated impairment, three met aquatic life standards and one had insufficient information for assessment. The impaired stream segment is addressed via an E.coli and total suspended sediment TMDL. Key strategies to address E. coli include ensuring compliance of septic systems, maintaining or improving pasture management, and restricting cattle access in high priority areas. Strategies to address excess sediment include increasing water storage within the watershed, implementing sediment trapping and controlling best management practices, and implementing channel restoration projects.

Procedure for public participation

As stated in Minn. R. chs. 7000 and 7001, there are three formal procedures for public participation in the MPCA’s consideration of this matter. Interested persons may:

1. Submit written comments on the draft reports.
2. Petition the MPCA to hold a public informational meeting.
3. Petition the MPCA to hold a contested case hearing.
Submitting written comments

To submit comments or petitions to the MPCA through the mail or email must state:

1. Your interest in the draft TMDL or WRAPS reports.
2. The action you wish the MPCA to take, including specific references to the section of the draft report(s) you believe should be changed. It is important to clearly specify which of the two reports the comments pertain to since the reports will proceed along separate tracks for final approval.
3. The reason(s) supporting your position, stated with sufficient specificity as to allow the MPCA to investigate the merits of the position.

Public informational meeting

A public informational meeting is an informal meeting during which interested persons can ask questions concerning the proposed project. The MPCA staff will be present to provide information. If an interested person would like the MPCA to hold a public informational meeting, the person should include all information identified above and in addition include a statement of the reasons the person desires the MPCA to hold a public informational meeting and the issues that the person would like the agency to address at the public informational meeting.

Contested case hearing

A contested case hearing is a formal proceeding before an administrative law judge empowered to advise the MPCA regarding issues of fact. As described in Minn. R. 7000.1800, persons who submit petitions for a contested case hearing must also state the issues they propose to address in a contested case hearing, the specific relief requested or resolution of the matter, and the reasons (which may be in the form of proposed findings) supporting an MPCA decision to hold a contested case hearing. Failure to comply with these rules exactly may result in a denial of the request. To the extent known, the petitioner may also submit a list of prospective witnesses to be called at a hearing, a proposed list of publications, references, or studies to be introduced at a hearing and the approximate time required for the petitioner to present the matter at a hearing. The decision whether to hold a contested case hearing will be made under Minn. R. 7000.1900.
