APPENDICES

1.0 Purpose and Scope

1.1 PURPOSE

Wenck Associates, Inc. (Wenck) conducted this Supplemental Remedial Investigation (SRI) of the Water Gremlin Company facility located at 4400 Otter Lake Road, White Bear Lake Township, Ramsey County, Minnesota (the Site) in accordance with the SRI Work Plan dated August 2019 verbally approved by the Minnesota Pollution Control Agency (MPCA) with modification in October 2019. The investigation and related activities are being conducted under MPCA Site ID SR0001534 to meet the requirements of the March 1, 2019 Stipulation Agreement (STIP) between Water Gremlin Company and the MPCA.

The purpose of the SRI described herein was to further evaluate the extent and magnitude of vapor, soil, groundwater, sediment and surface water impacts previously identified at the Site during completion of the initial Remedial Investigation (RI) in June 2019. The first phase of the RI identified trichloroethylene (TCE) and trans-1,2-dichloroethene (TDCE) in sub-slab vapor samples collected beneath the North Campus manufacturing building; volatile organic compounds (VOCs), including TCE and vinyl chloride (VC), in the shallow groundwater on the property; the VOCs tetrachloroethene (PCE) and TCE in Site soils, and lead in soil, sediment and surface water samples on the Site, some of which were above applicable MPCA risk-screening criteria.

1.2 SCOPE OF SERVICES

- The following scope of service was completed for this SRI between August 2019 and January 2020.
- Preparation of the SRI Work Plan and submittal to the MPCA for approval.
- The Site Safety and Health Plan (SSHP) prepared to cover all field work under the MPCA-approved RI Work Plan was referenced during completion of SRI activities. The SSHP was modified to address safety and health requirements based on site-specific conditions encountered during the initial June 2019 RI field activities. The SSHP included emergency phone numbers and directions to the local hospital.
- Cleared public and private utilities prior to implementation of each sampling event;
- Completed a total of 32 borings over the course of the supplemental investigation for soil and/or groundwater sampling (17 interior borings and 15 exterior borings);
- Completed 24 push-probe soil borings to assess current soil and/or groundwater conditions inside and outside the North Campus building;
- Completed 24 push-probe borings using a Geoprobe® Screen Point 15 (SP-15) screen for collection of multiple vertical groundwater samples from selected boring locations;
- Completed eight (8) soil borings using Geoprobe hand-driven coring equipment, seven (7) within the coating rooms and one (1) in the cold forming room to assess current soil and shallow groundwater conditions;
- Observed and collected soil samples recovered from the push-probe and/or hand tooling borings, created soil boring logs, and field-screened soil for the presence of volatile organics with a photoionization detector (PID);
- Collected soil samples from 28 push-probe and/or hand tooling borings;
- Collected groundwater samples from 32 push-probe and/or hand tooling borings;
- Collected a total of 70 soil samples, (38 soil samples for analysis of volatile organic compounds (VOCs), and 32 soil samples for analysis of lead;

- Collected a total of 221 groundwater samples from temporary well screens (115 groundwater samples for analysis of VOCs by EPA Method 8260B, 98 groundwater samples for analysis of 1,4-dioxane and eight (8) groundwater samples for analysis of dissolved lead;
- Completed two rounds (pre-heating and post-heating season) of exterior soil vapor probes at 23 locations from 3-5-feet below grade (bg) to assess soil vapor conditions;
- Collected 46 soil vapor samples for VOCs ;
- Installed and sampled 13 permanent sub-slab vapor pins within the Northwest Die Cast, lunchroom, coining room, locker rooms, East Die Cast, shipping and receiving and Gravity Cast areas of the North Campus building;
- Collected 25 sub-slab samples, nine (9) outdoor ambient air samples and 15 indoor air samples from various locations throughout the North Campus building for VOCs;
- Collected 14 surface water samples, eight (8) along County Ditch 14 on the eastern portion of the property, three (3) from inlets south and southeast of County Ditch 14, one (1) from the south discharge of the southwest stormwater pond, and two (2) south of the east stormwater pond (between the east stormwater pond discharge and County Ditch 14) for laboratory analysis of lead;
- Collected two (2) roof drain downspout samples during a rain event for laboratory analysis of lead;
- Collected 14 sediment samples, eight (8) along County Ditch 14 on the eastern portion of the property, three (3) from inlets south and southeast of County Ditch 14, one (1) from the south discharge of the southwest stormwater pond, and two (2) south of the east stormwater pond (between the east stormwater pond discharge and County Ditch 14) for laboratory analysis of lead;
- Installed a permanent groundwater monitoring well near Lambert Creek and completed manual water level monitoring;
- Collected appropriate QA/QC samples per the approved SRI Work Plan; and
- Prepared this SRI report documenting the results of the investigation and providing recommendations for additional investigation.

2.0 Site Description and History

2.1 SITE LOCATION

The Site is located in a commercial and residential area at 4400 Otter Lake Road White Bear Lake Township, Ramsey County, Minnesota. Additional addresses of the Site include: 0, 1596 and 1610 Whitaker Street; 4316, 4336, 4350 and 4370 Otter Lake Road. The Site is located in the East ½ of the Southwest ¼ of the Northeast ¼ of Section 22, Township 30 North, Range 22 West.

The Site consists of seven parcels occupied by two manufacturing buildings (the North Campus building and the South Campus building) with paved parking lots and drive areas, support structures, storage areas and landscaped areas along the western portion of the property. The eastern half of the Site primarily consists of undeveloped wetlands. County Ditch 14 (Lambert Creek) bisects the center of the Site in an approximate east-west configuration. A pedestrian bridge is located along Otter Lake Road providing access to the two buildings. The site is approximately 61.44-acres in size and is associated with the following parcel numbers:

- 1596 Whitaker Street: 22-30-22-13-0024 (2.77-acres)
- 1596 Whitaker Street: 22-30-22-14-0009 (0.69-acres)
- 4400 Otter Lake Road: 22-30-22-13-0022 (10.77-acres)
- 4316 Otter Lake Road: 22-30-22-22-42-0013 (6.9-acres)
- 4336 Otter Lake Road: 22-30-22-13-0007 (0.64-acres)
- 4370 Otter Lake Road: 22-30-22-13-0023 (4.62-acres)
- 0 Whitaker Street: 22-30-22-14-0008 (35.05-acres)

Areas investigated as part of the MPCA-approved SRI Work Plan included the North Campus building and approximately 13-acres of the northeastern portion of the Site (portions of the 1596, 4400 and 4370 parcels).

The Site location is shown in Figure 1. A Remedial Investigation Area Detail Map is included as Figure 2.

2.2 CURRENT SITE CONDITIONS AND USE

The Site currently consists of a North Campus and a South Campus. The North Campus is the primary manufacturing operation at 4400 Otter Lake Road. The existing North Campus building is approximately 90,000 square feet in size with the original building constructed in 1949. Building additions were made in approximately 1952, 1954, 1959, 1962, 1964, 1965, 1968, 1969, 1971, 1973, 1974, 1976, 1978, 1987, 1994, 1995, 1997 and 1998, with interior renovations in 2013 and 2018.

Manufacturing operations in the North Campus building include die casting, hot melt molding, hot melt extrusion, cold forming, coining, gravity casting and coating. Lead bars are melted into liquid via hot melt pots located on die cast machines. The molten lead is injected into a die (mold) forming custom lead parts. Scrap material is dropped into a conveyor that brings the scrap back to the lead melting pot for reclamation.

The coating operations consist of mixing a solvent with solid coating materials (Oppanol and wood resin) to produce a liquid material for application on lead parts. Coating operations are conducted within plexiglass enclosures, which are vented to a common duct. Prior to January 2019, trichloroethylene (TCE) was used as the primary carrier in the coating process. Water Gremlin resumed coating operations in March 2019 using FluoSolv®, a proprietary blend of non-flammable hydrofluoroethers (HFEs) and trans-1,2-dichloroethylene (t-DCE).

The South Campus is currently improved with one approximately 84,000 square foot building at 4316 Otter Lake Road. The building was constructed between 2013 and 2014. Operations in the South Campus building primarily consist of warehousing, light assembly, research and development and shipping and receiving. The majority of the building consists of warehouse space. Light assembling and product packaging activities are conducted in the southeastern portion of the building and research and development (R&D) laboratories are located along the southwestern portion of the building. Very small quantities of solvents and lead are used for process research in the R&D laboratory. All waste streams generated in the R&D lab are properly disposed off-site and proper authorization. All waste documentation is kept on site per all state and federal requirements. Loading docks and shipping/receiving are located on the east side of the building.

2.3 PAST SITE USE

According to reviewed sources of information, the Site was originally purchased by the Ratte family in 1918 for agricultural use. Small scale manufacturing operations of Rubbercor fishing sinkers began in a garage at the Site in approximately 1949. Operations increased over subsequent years and multiple building additions were completed. By approximately 1964 Water Gremlin began coining operations and expanded their facility to 12,000-square feet. By the early 1970s Water Gremlin was a leading manufacturer of fishing sinkers and the facility had expanded to approximately 24,000-square feet. Water Gremlin expanded operations to include custom lead parts in the mid to late 1970s and in approximately 1977 the facility was expanded to approximately 32,000-square feet to include custom parts manufacturing equipment. Between 1997 and 1998, additions totaling roughly 24,000-square foot were completed to the south and eastern portions of the North Campus building. Interior and exterior renovations were completed at the North Campus building in 2013, and in 2016 the west parking lot and stormwater ponds were completed. In 2018 an interior portion of the North Campus building floor was replaced.

Former dwellings on the northern portion of the Site were addressed as 1596 Whitaker Street, 4350 Otter Lake Road & 4370 Otter Lake Road. The residential structures were located adjacent to the west and northwest of the North Campus building from at least 1940 until 2015 when the structures were razed.

Residential structures were located on the southern portion of the Site in the vicinity of the current south building from at least 1940 until the early 1990s. The South Campus building was constructed at 4316 Otter Lake Road in 2013. A residential structure was located at 4336 Otter Lake Road, adjacent to the north of the South building, from 1924 until 2017 when the residence was razed.

The central and eastern portions of the Site have remained vacant wetlands, bisected by County Ditch 14 (Lambert Creek) from at least 1940 to the present. A pedestrian bridge was constructed over the county ditch and wetlands, along Otter Lake Road in 2017.

3.0 Project Background

Between 1995 and 2004 Water Gremlin was enrolled in the MPCA Voluntary Investigation and Cleanup (VIC) program as VP5540 and RCRA Remediation as MND006167720. Previous subsurface investigations completed in the vicinity of the North Campus building at the Site identified lead soil impacts which were remediated by excavation conducted in September and November 1996. On June 20, 1997, a No Further Action (NFA) Letter related to soil was issued by the MPCA; however, additional assessment of groundwater was required before a site wide NFA letter could be issued.

Beginning in 1997, a series of soil and groundwater investigations were conducted in the vicinity of the Water Gremlin North Campus building. Multiple soil borings were advanced through the concrete floor inside the building as well as outside the building and six groundwater monitoring wells were completed at the Site.

Soil borings and monitoring wells completed under the North Campus building and along the south side of the North Campus building showed elevated concentrations of the chlorinated solvents TCE and 1,1,1-trichloroethane (1,1,1-TCA), which were used as solvents in the coating process at the time. Annual groundwater monitoring completed between 2000 and 2004 identified a southerly flow direction across the Site. Subsurface investigations identified a contiguous silty-clay to clay confining unit across the Site that impeded vertical groundwater flow and confined known groundwater impacts to the water table aquifer at the Site.

Changes in the concentrations of chlorinated VOC concentrations in groundwater between 1997 and 2004 showed that natural biodegradation of these chemicals had occurred. Concentrations of VOCs in the groundwater at the Site had generally decreased and were below their respective, current at the time, 2004 Minnesota Department of Health (MDH) Health Risk Limits (HRLs) guidance values during the last groundwater sampling event completed in April 2004. On May 14, 2004, the MPCA VIC staff issued a NFA letter to Water Gremlin for the identified release of VOCs to groundwater at the Site.

In July 2018, Water Gremlin self-reported that the facility's air pollution control equipment (solvent recovery system) was not functioning properly, causing TCE to be emitted into the air at concentrations exceeding those allowed under its facility air permit. On March 1, 2019, the MPCA issued a Stipulation Agreement (STIP) related to alleged air emissions violations. Water Gremlin was required to pay a $4.5-million dollar fine and fund two Supplemental Environmental Projects for a combined $1.5 million. Water Gremlin is currently working with the MPCA to complete on-Site environmental investigation in accordance with the March 1, 2019 STIP.

The following previous environmental reports prepared for the Water Gremlin facility were reviewed prior to implementation of the 2019 STIP environmental investigations:

- *Environmental Soils Evaluation Report, Water Gremlin Company, 1610 Whitaker Avenue, White Bear Lake, Minnesota*. Prepared for Water Gremlin Company. Braun Intertec Corporation; November 28, 1994. (1994 Soil Investigation Report)
- *Phase I Environmental Site Assessment, Water Gremlin Company, 1610 Whitaker Avenue, White Bear Lake, Minnesota.* Prepared for Water Gremlin Company. Braun Intertec Corporation; April 10, 1995. (1995 Braun Phase I Report)

- *Soil Excavation Observations and Documentation Report, Water Gremlin Company, 1610 Whitaker Avenue, White Bear Lake, Minnesota.* Prepared for Water Gremlin Company. Braun Intertec Corporation; September 26, 1995. (1995 Soil Excavation Report)
- *Phase II Environmental Site Assessment, Water Gremlin Company, 1610 Whitaker Avenue, White Bear Lake, Minnesota.* Prepared for Water Gremlin Company. Braun Intertec Corporation; March 26, 1996. (1996 Braun Phase II Report)
- *Response Action Plan, Water Gremlin Company, 1610 Whitaker, White Bear Lake, Minnesota*. Prepared for Minnesota Pollution Control Agency. Braun Intertec Corporation; September 12, 1996. (1996 Response Action Plan)
- *Appraisal of 4326 Ottertail Road, White Bear Township, MN 55110.* Prepared for David Zinschlag, Water Gremlin Company. The Search Co. Appraisal Division. (1997 Appraisal)
- *Response Action Plan Implementation, Water Gremlin Company, 1610 Whitaker Avenue, White Bear Lake, Minnesota*. Prepared for Water Gremlin Company. Braun Intertec Corporation; April 8, 1997. (1997 RAP Implementation)
- Letter Report to Mr. Douglas Johnson, Water Gremlin Company, *RE: Water Gremlin Site, MPCA Project Number 5540, No Further Action Determination.* Prepared for Water Gremlin Company. MPCA; June 20, 1997. (1997 NFA)
- *Environmental Soil and Groundwater Evaluation, Water Gremlin Company, 1610 Whitaker Avenue, White Bear Lake, Minnesota*. Prepared for Water Gremlin Company. Braun Intertec Corporation; August 4, 1997. (1997 Soil and Groundwater Evaluation 1)
- *Environmental Soil and Groundwater Evaluation Report 2, Water Gremlin Company, 1610 Whitaker Avenue, White Bear Lake, Minnesota*. Prepared for Water Gremlin Company. Braun Intertec Corporation; January 6, 1998. (1998 Soil and Groundwater Evaluation 2)
- *Environmental Soil and Groundwater Evaluation Report 3, Water Gremlin Company, 1610 Whitaker Avenue, White Bear Lake, Minnesota*. Prepared for Water Gremlin Company. Braun Intertec Corporation; January 15, 1999. (1999 Soil and Groundwater Evaluation 3)
- *Environmental Groundwater Evaluation Report 4, Water Gremlin Company, 1610 Whitaker Avenue, White Bear Lake, Minnesota*. Prepared for Water Gremlin Company. Braun Intertec Corporation; November 5, 1999. (1999 Soil and Groundwater Evaluation 4)
- *Annual Groundwater Monitoring Report, Water Gremlin Company, 1610 Whitaker Avenue, White Bear Lake, Minnesota*. Prepared for Water Gremlin Company. Braun Intertec Corporation; February 25, 2000. (1999 Annual Monitoring Report)
- *Annual Groundwater Monitoring Report, Water Gremlin Company, 1610 Whitaker Avenue, White Bear Lake, Minnesota*. Prepared for Water Gremlin Company. Braun Intertec Corporation; January 3, 2001. (2000 Annual Monitoring Report)
- *Annual Groundwater Monitoring Report, Water Gremlin Company, 1610 Whitaker Avenue, White Bear Lake, Minnesota*. Prepared for Water Gremlin Company. Braun Intertec Corporation; April 30, 2002. (2001 Annual Monitoring Report)
- *Annual Groundwater Monitoring Report, Water Gremlin Company, 1610 Whitaker Avenue, White Bear Lake, Minnesota*. Prepared for Water Gremlin Company. Braun Intertec Corporation; January 13, 2003. (2002 Annual Monitoring Report)
- *Annual Groundwater Monitoring Report, Water Gremlin Company, 1610 Whitaker Avenue, White Bear Lake, Minnesota*. Prepared for Water Gremlin Company. Braun Intertec Corporation; February 19, 2004. (2003 Annual Monitoring Report)

- *Draft Phase I Environmental Site Assessment, Water Gremlin, 1610 Whitaker Avenue, White Bear Lake Township, Minnesota*. Prepared for Water Gremlin Company. April 2004. (2004 Phase I ESA)
- Letter Report to Mr. David Zinschlag, Water Gremlin Company*, RE: Additional Groundwater Monitoring Assessment, Water Gremlin Company, 1610 Whitaker Avenue, White Bear Lake, Minnesota.* Prepared for Water Gremlin Company. May 6, 2004. (2004 Groundwater Monitoring Report)
- Letter Report to Mr. David Zinschlag, Water Gremlin Company*, RE: Water Gremlin Site, 1610 Whitaker Avenue, White Bear Lake, Minnesota, MPCA Project Number VP5540, No Further Action Determination.* Prepared for Water Gremlin Company. MPCA; May 14, 2004. (2004 NFA)
- *Phase II Environmental Sampling, Water Gremlin, White Bear Lake Township, Minnesota*. Prepared for Water Gremlin Company. June 9, 2004. (2004 Phase II ESA)
- Facsimile message from Dave Zinschlag, Water Gremlin Co. to JoAnn Henry, MPCA Tanks Division regarding Water Gremlin Tank Inventory, October 5, 1999 & May 13, 2004. (1999-2004 Tank Inventory)
- Minnesota Pollution Control Agency AST Notification of Installation or Change in Status Form. October 10, 2012. (2012 MPCA Tanks – Change In Status)
- Minnesota Department of Health Well and Boring Sealing Record, Minnesota Well and Boring Sealing No. H355975. American Engineering Testing.4-25-2018. (MWD Well Sealing)
- *Report of Geotechnical Exploration, Die Cast Machine Foundation, Water Gremlin Company, 4400 Otter Lake Road, White Bear Township, Minnesota*. Prepared for Water Gremlin Company. American Engineering and Testing; May 16, 2018. (2018 AET Geotechnical Report)

The reviewed documentation was summarized in Wenck's April 2019 Phase I Environmental Site Assessment (ESA).

Following the March 2019 STIP, the following environmental investigations have been completed at the Site:

- *Phase I Environmental Site Assessment, Water Gremlin Company, 4400 Otter Lake Road, White Bear Lake Township, Minnesota.* Prepared for Water Gremlin Company. Wenck Associates, Inc.; April 2019. (2019 Wenck Phase I Report)
- *Remedial Investigation Work Plan, Water Gremlin Company, White Bear Lake Township.* Prepared for Water Gremlin Company. Wenck Associates; May 2019. (2019 RI Work Plan)
- *Remedial Investigation Summary, Water Gremlin Company, White Bear Lake Township.* Prepared for Water Gremlin Company. Wenck Associates; July 2019. (July 2019 RI)
- *Supplemental Remedial Investigation Work Plan, Water Gremlin Company, 4400 Otter Lake Road, White Bear Lake Township, MPCA Site ID SR0001534.* Prepared for Water Gremlin Company. Wenck Associates; May 2019. (2019 SRI Work Plan)

3.1 2019 Wenck Phase I ESA Report

Wenck completed a Phase I ESA for the Site in April 2019. The ESA identified no recognized environmental conditions (RECs), controlled recognized environmental conditions (CRECs) or historical recognized environmental conditions (HRECs) relative to the Subject Property, except for the following:

- *"In 1982 the MPCA had investigated a complaint of alleged discharge of contaminated cooling water with oil from the Water Gremlin plant to a county ditch. Lead impacted soil was identified in the soil sample collected at the discharge point. The identified impacts associated with the discharge of contaminated cooling water is considered to represent a REC for the Subject Property.*
- *The potential for subsurface soil, groundwater and soil vapor impacts at the Subject Property associated with the former septic system is considered to represent a REC for the Subject Property.*
- *Previous lead contaminated soil and solvent impacted groundwater investigated as VP5540 is considered a CREC for the Subject Property.*
- *Petroleum impacts to soil and groundwater have been identified at the North Campus building of the Subject Property during previous subsurface investigations completed between 1995 and 2004. The identified petroleum impacts have not been investigated and therefore are considered to represent a REC.*
- *Oil staining in the vicinity of the die cast machines and along the wall of the tool room in the North Die Cast building is considered and REC.*
- *The air pollution control equipment at the North Campus building was found to be not functioning properly, causing TCE to be emitted into the air at concentrations exceeding Water Gremlin's air permit. Corrective actions are currently on-going. The identified TCE release is considered a REC for the Subject Property."*

3.2 2019 RI Work Plan

The RI Work Plan was prepared by Wenck Associates on behalf of Water Gremlin to meet the requirements of Section 10, paragraphs aa. and cc. of the March 1, 2019 Stipulation Agreement between Water Gremlin Company and the MPCA. The RI Work Plan was submitted to the MPCA Remediation staff for review and approved on May 14, 2019.

The scope of work outlined in the RI Work Plan was completed and summarized in the July 2019 RI Summary report (Discussed in Section 3.3 below).

3.3 July 2019 RI Report

The purpose of the July 2019 RI was to assess soil, sediment, surface water, groundwater, sub-slab vapor and crawl space conditions identified as Areas of Concern (AOCs) in accordance with the approved 2019 RI Work Plan. The July 2019 RI consisted of the completion of 18 push-probe soil borings, 17 push-probe borings for vertical groundwater profiling, seven hand auger soil borings, 25 permanent sub-slab vapor pins, six crawl space air samples and two outdoor ambient air samples between June 4, 2019 and June 26, 2019. Soil, groundwater and soil vapor samples collected at the Site were analyzed for lead by EPA method 6010D and/or VOCs modified list by EPA method 8260B. The following VOCs were included in the MPCA-approved modified 8260B list and analyzed for during the June 2019 RI:

- VOCs: chloroethane; 1,1-dichloroethane (1,1-DCA); 1,2-dichloroethane (1,2-DCA); 1,1-dichloroethene (1,1-DCE); *cis*-1,2-dichloroethene (*cis*-1,2-DCE); *trans*-1,2-dichloroethene (*trans*-1,2-DCE); tetrachloroethene (PCE); 1,1,1-trichloroethane (1,1,1-TCA); 1,1,2-trichloroethene (TCE); and vinyl chloride (VC).

The July 2019 RI activities identified soil profiles across the Site generally consisting of approximately three to eleven feet of fill comprised primarily of dark brown silty and clayey sand with gravel. The native soils below the fill generally consist of water bearing granular

soils primarily comprised of fine- to medium-grained sand, silty sand and clayey sand to approximately 20 feet bg. Below the granular soils, Site soils consisted primarily of a semi-confining clay layer consisting of very fine-grained lacustrine deposits containing highly laminated beds of silts, clays and very fine sands.

During the July 2019 RI activities Wenck identified groundwater depths between approximately 3.9 feet bg to approximately 10.7 bg feet across the Site. The thickness of the perched water column was observed from approximately 9 to 27 feet above the top of the semi-confining clay layer.

Soil Conditions

A total of 31 soil samples were collected and analyzed for total lead. Lead was detected above laboratory reporting limits in all 31 of these samples. The Industrial Soil Reference Value (SRV) of 700 milligrams per kilogram (mg/kg) was exceeded at GP-16 (0-1′) at 719 mg/kg, GP-18 (0-1′) at 776 mg/kg, HA-1 (0-1′) at 982 mg/kg and HA-5 (0-1′) at 979 mg/kg. None of the detected total lead values exceeded the Tier 1 Soil Leaching Value (SLV) of 2,700 mg/kg.

VOCs were not detected above their respective laboratory reporting limits in any of the soil samples collected at the Site, with two exceptions. Specifically, GP-16 contained PCE at a detected concentration of 0.269 mg/kg, above the SLV of 0.042 mg/kg, and TCE at a concentration of 0.826 mg/kg, above the SLV of 0.0023 mg/kg.

Groundwater

A total of 58 groundwater samples collected from the soil borings were analyzed for VOCs. The VOC compounds including 1,1-DCA, chloroethane, *cis*-1,2-DCE, *trans*-1,2-DCE, TCE and VC were detected above their laboratory reporting limits during this investigation. TCE and VC were the only compounds identified at concentrations exceeding their respective HRLs. TCE exceeded the HRL in samples GP-1 (16-18), GP-2 (15-17), GP-3 (16-18), GP-6 (7-10), GP-6 (15-17), GP-7 (14-16), GP-8 (5-7), GP-8 (12-14), GP-9 (13-15), GP-10 90-5), GP-0 (10-12, GP-11 (15-17), GP-12 (22-24), GP-14 (9-14), GP-15 (8-13), GP-15 (18-20), GP-15 32-34), GP-16 (10-15), GP-16 (20-22, GP-16 (34-36), 062619-A (blind duplicate of GP-16 [34-36]), GP-17 (17-19), GP-17 (24-26) and GP-18 (20-22). VC was identified above the HRL in samples GP-14 (9-14), GP-15 (8-13), GP-15 (18-20), GP-16 (10-15), GP-16 (20-22), Gp-18 (10-15) and 062619-B (blind duplicate of GP-18 [10-15]).

Sub-Slab Soil Vapor

A total of 25 sub-slab soil vapor samples (SS-1 through SS-25) were analyzed for a modified list of VOCs by the EPA Method TO-15. Five individual VOCs (1,1,1-TCA, 1,1-DCA, *cis*-1,2 DCE, PCE, *trans*-1,2,DCE and TCE were detected above the laboratory method reporting limits but below their respective Industrial Intrusion Screening Values (ISVs).

The following results were identified above 33X the Industrial Intrusion Screening Values (ISVs):

- TCE in the samples collected from: SS-1 through SS-4, SS-6, SS-8 through SS-15, SS-18 through SS-20 and SS-22 through SS-25.

The following results were identified above 33X the Industrial Expedited Intrusion Screening Values (EISVs):

- TCE in the samples collected from: SS-2, SS-6, SS-8 through SS-15, SS-18 through SS-20 and SS-22 through SS-24.

Indoor Air

A total of eight ambient air samples (six crawl space and two background samples) were collected during the July 2019 RI activities and analyzed for a modified list of VOCS by EPA Method TO-15. All eight samples reported VOCs identified above their respective laboratory reporting limit.

The following results were identified above the Industrial ISVs:

- TCE in the samples collected from: AA-3, AA-4, AA-5, AA-7 and AA-8.

Sediment

VOCs were not detected above laboratory reporting limits in any of the sediment samples collected during this investigation. Lead concentrations were identified above the MPCA Level 1 Sediment Quality Target (SQTs) in four of the five sediment samples collected from the north bank of County Ditch 14 and in one of the samples collected from the eastern stormwater pond outlet. The two sediment samples collected from the eastern stormwater pond inlets identified lead concentrations above the MPCA Level II SQT.

Surface Water

VOCs were not detected above laboratory reporting limits in any of the six surface water samples collected from County Ditch 14 (Lambert Creek). Concentrations of lead in the six surface water samples collected from County Ditch 14 (Lambert Creek) ranged from non-detect to 12.5 micrograms per liter (µg/l). Lead was detected above the hardness adjusted Tier I Surface Water Criteria at two sample locations.

The June 2019 RI analytical results are provided on the figures and tables included in Appendix A.

3.4 2019 SRI Work Plan

The SRI Work Plan was prepared by Wenck Associates on behalf of Water Gremlin to further evaluate the extent and magnitude of vapor, soil, groundwater, sediment and surface water impacts at the Site. The SRI Work Plan took into consideration the comments made by the MPCA in its Remedial Investigation Summary letter dated August 8, 2019 related to the review of the Wenck Remedial Investigation Report, dated July 2019.

The 2019 SRI Work Plan was submitted to the MPCA Remediation staff for review and approved verbally in October and November 2019. The MPCA provided an email confirmation of their approvals on January 16, 2020.

4.0 Site Physical Setting

4.1 TOPOGRAPHY

The Site has a general slope to the east toward Goose Lake and White Bear Lake with the approximate elevation ranging from 920 to 910 feet above mean sea level. Site surface drainage is sheet flow toward the municipal stormwater sewer system associated with adjacent public streets and via infiltration in the wetland areas on the eastern portion of the Site. Historic development may have included grading or filling of the Site to improve the location for construction and drainage.

County Ditch 14 (Lambert Creek) is in an east-west configuration and bisects through the approximate center of the Site. County Ditch 14 receives drainage from the adjacent wetlands, residential developments and Goose Lake to the east and flows southwest through Rice Lake and eventually drains into East Vadnais Lake, located approximately 3.5-miles southwest of the Site.

A stormwater retention pond is located directly east of the main manufacturing building and receives stormwater runoff from the parking lot areas located on the east, north and southeast sides of the building as well as roof drain runoff. The eastern stormwater pond overflows to the surrounding wetlands and then to Lambert Creek, which runs along the south side of the Facility.

A stormwater pond is located southwest of the loading docks of the North Campus building. The stormwater pond receives runoff from the southwest portion of the facility, which includes the shipping and receiving docks, covered dumpsters, and diesel generator. The stormwater pond has an outlet on the south side and water flows under the drive via a culvert and then flows overland to Lambert Creek.

4.2 GEOLOGY

Published references describe the surficial geology on the northwestern portion of the Site (in the vicinity of the North Campus building) as sandy lake sediment comprised of fine to medium silt and clay deposits of a former lake that may have been partially confined by stagnant ice. Surficial geology on the southeastern portion of the Site consists of organic sediment comprised of peat, shallow lakes and/or marshes. The Ramsey County Atlas indicates some areas may have been excavated and/or artificially filled (Minnesota Geological Survey, 1992).

Previous subsurface investigations completed at the Site have identified shallow fill soils underlain by fine-grained, poorly graded sandy soils ranging in thickness from five (south end of the Site) to approximately 30 feet (north end of the Site). This sandy unit overlies a silty clay semi-confining layer with silt and sand lenses. The semi-confining layer is estimated to be approximately 45 to 65 feet thick. Beneath this semi-confining layer is a clayey to silty sand unit.

Based on geologic references the thickness of the unconsolidated sediments in the area of the Site are approximately 200 feet thick.

The July 2019 RI revealed soil profiles across the Site generally consist of approximately 3 to 11 feet of fill consisting primarily of dark brown silty and clayey sand with gravel. Fill with varying amounts of debris including concrete, slag and brick was observed in the upper 1 to 11 feet at boring locations GP-6, GP-8, GP-9, GP-10, GP-11, GP-12, GP-13, GP-14, GP-15, GP-16, GP-17 and GP-18. The fill soils were observed to be deepest in the borings completed south and southeast of the North Campus building (GP-11 through GP-18).

The native sediment below the fill generally consist of water bearing unconsolidated sediments primarily consisting of fine to medium grained sand, silty sand and clayey sand. These unconsolidated sediments were encountered below the fill to approximately 20 feet bg and general the thickness of the sediments varied from 15 to 27 feet thick on the western and northeastern portions of the Site and from 5 to 10 feet thick on the southern portion of the Site. Organic soils and peat were encountered below the fill soils from approximately 10 to 13 feet in the soil borings GP-14, 15, 16 and 17, completed along the southeast corner of the North Campus building.

The material encountered below the sandy materials discussed above was primarily of well sorted, very fine-grained sediments which included both silt- and clay-grade materials indicative of lacustrine deposits. These lacustrine deposits included highly laminated beds of silts, clays and very fine sands. Traces of organics were observed within the clayey soils at several locations along the south side of the North Campus building. Alternating layers of silt, silty sand, clayey sand, fat clay and lean clay were encountered below the granular soils at depths ranging from approximately 11 feet bg to 30 feet bg and continuing to the boring terminus at each boring location. The upper layers of these fine silty and clayey sediments included numerous lenses of very fine sand and silty sand with high moisture content. The clay content generally increased with depth becoming denser with fewer lenses of granular sediments, and borings were terminated when the non-water bearing impermeable clay layer was encountered.

Published references describe the first-encountered bedrock unit beneath the northwestern portion of the property as the Ordovician-aged St. Peter Sandstone. The St. Peter Sandstone units ranges in thickness from approximately 155 to 165 feet in Ramsey County. The upper portion of the St. Peter Sandstone consists of fine- to medium-grained sandstone. The lower portion of this unit is composed of fine-grained units of mudstone, siltstone and shale interbedded with coarse-grained sandstone. The first encountered bedrock unit in the southeastern portion of the property is the Prairie du Chien Group consists of thinly to thickly-bedded dolostone. (Minnesota Geological Survey, 1992). Depth to bedrock is anticipated to be approximately 200 feet bg (Minnesota Geological Survey, 1992).

4.3 HYDROGEOLOGY

According to available hydrogeologic references, the general direction of shallow groundwater flow in the area of the Site is to the west (Minnesota Geological Survey, 1992). Local conditions may vary due to surface water features, perched groundwater conditions or artificially created drainage systems. Depth to regional groundwater is noted to be between approximately 10 to 20 feet below ground surface (Minnesota Geological Survey, 1992).

Previous monitoring wells completed at the Site identified shallow groundwater between 7 and 12-feet bg with a southerly flow direction, towards the wetland and County Ditch 14 (Lambert Creek). The previous subsurface investigations completed at the Site indicate two

distinct aquifers are present in the vicinity of the Site. Groundwater has historically been identified within the upper 10-feet bg of the shallow unconsolidated aquifer and at approximately 25-feet bg within a deeper buried glacial aquifer.

Groundwater levels at the time of the July 2019 RI drilling activities varied between approximately 3.9 feet below grade to approximately 10.7 feet below grade across the Site. The height of the water column was observed from approximately 9 to 27 feet above the top of the semi-confining clay layer.

4.4 SURFACE WATER

The Site consists of a mix of permeable and impermeable surfaces including buildings, paved areas, retention ponds, wetlands, and landscaped areas. Surface water features at the Site include stormwater retention ponds, County Ditch 14 (Lambert Creek) and associated wetlands.

Runoff from impermeable surfaces generally flows to the two main retention ponds located southwest and east of the North Campus building. Stormwater from the southwest portion of the facility, including the shipping and receiving docks, covered dumpsters, and diesel generator flows to the west retention pond. The retention pond has an outlet on the south side and water flows under the drive via a culvert and then flows overland to Lambert Creek. All other runoff from significant materials exposed at the facility eventually flows to the east retention pond which overflows to the surrounding wetlands and then to Lambert Creek, which runs along the south side of the Facility.

Based on a review of the digital United States Fish and Wildlife Service (USFWS) National Wetlands Inventory (NWI) maps (http://www.fws.gov/wetlands/data/Mapper.html), the Site has designated wetland areas onsite. The predominant wetlands onsite are described as freshwater emergent and freshwater forested/shrub wetlands. According to the Vadnais Lake Area Water Management Organization (VLAWMO) the wetlands on and adjacent to the southeast of the Site are described as the Sobota Slough freshwater emergent wetland complex.

Lambert Creek runs along the southern and eastern portions of the Site and a permanent drainage easement is in place allowing the City of White Bear Lake to conduct ditch maintenance, including tree removal. According to VLAWMO the headwaters of Lambert Creek are Whitaker Pond, located adjacent to the northeast of the Site along Whitaker Street and West Goose Lake via an unnamed ditch to the southeast of the Site. Lambert Creek flows approximately 4-miles to the southwest towards its outlet at Vadnais Lake and receives water from multiple side streams including Branches 1, 2, 3, 4 5A and 5 and storm drains. Lambert Creek is listed as impaired for aquatic recreation due to fecal coliform.

5.0 Site Investigation Methods and Procedures

5.1 RATIONALE AND OBJECTIVE

The objective of the SRI at the Site was to further assess soil vapor, soil, groundwater, sediment and surface water conditions in an effort to fill in data gaps from the July 2019 RI. The general scope of services associated with the SRI consists of the following tasks:

- Preparation of the SRI Work Plan.
- Installation of additional sub-slab vapor points within the North Campus building to assess sub-slab vapor conditions in previously un-investigated areas of the building.
- Completed two rounds of exterior soil vapor probes from 3-5 feet bg to assess soil vapor conditions surrounding the North Camps building.
- Collection of sub-slab vapor samples and soil vapor samples for laboratory analysis of VOCs using EPA method TO-15.
- Advancement of push-probe soil cores for the purpose of collecting soil samples for lab analysis.
- Advancement of push-probe soil cores for the purpose of collecting grab groundwater samples.
- Collection of surface water samples from the County 14 Ditch.
- Collection of sediment samples from the County 14 Ditch, the wetland south of the east stormwater pond and from several of the North Campus building roof downspouts.
- Installation of a permanent groundwater monitoring well near Lambert Creek and completion of water level monitoring.
- Preparation of an SRI report documenting SRI activities and recommendations.

Procedures for soil, soil vapor, sediment, surface water and groundwater sampling activities are detailed in the MPCA-approved SRI Work Plan.

5.2 FIELD INVESTIGATION OVERVIEW

The SRI focused on further evaluation of the extent and magnitude of vapor, soil, groundwater, sediment and surface water impacts identified at the Site during completion of the July 2019 RI. The SRI activities discussed in this report were conducted during multiple mobilizations to the Site between the dates of August 23, 2019 to January 10, 2020. The following table summarizes chronological order of the SRI sampling activities:

Investigation Activity	Dates	Sample IDs	Media Sampled	Contractor
Installation and sampling of additional sub-slab vapor pins	August 23, 2019	SS-26 through SS-37	Sub-slab vapor	Wenck
Exterior soil vapor sampling	August 23-28, 2019	SV-1 through SV-15	Vapor	Thein
Push-probe borings	August 28-30, 2019	GP-19 through GP-22	Groundwater	Thein
Collection of paired sub-slab and indoor air samples	September 16-17, 2019	SS-6, SS-35, SS-26, IA-1 through IA-3, AA-1 and AA-2	Sub-slab, indoor air and ambient air	Wenck

Investigation Activity	Dates	Sample IDs	Media Sampled	Contractor
Collection of paired sub-slab and indoor air samples in coating rooms	October 2-3, 2019	SS-10 though SS-15 and SS-19 IA-4 through IA-10 and AA-9	Sub-slab, indoor air and ambient air	Wenck
Coating room soil borings	October 4-7, 2019	SB-1 through SB-7	Soil and groundwater	Thein
Coating room sub-slab sampling	October 7, 2019	SS-10 through SS-15, SS-19 and SS-20	Sub-slab	Wenck
Collection of paired sub-slab and indoor air samples, install SS-38 vapor pin	October 9-10, 2019	SS-30, SS-34, SS-36, SS-37, SS-38, IA-11 through IA-15, AA-9 through AA-11	Sub-slab, indoor air and ambient air	Wenck
Collection of downspout samples during rain event	October 21, 2019	Downspout #1 & Downspout #2	Roof runoff	Wenck
Collection of sediment samples	October 23-24, 2019	Sed-9 through Sed-22	Sediment	Wenck
Collection of surface water samples	October 23-24, 2019	SW-7 through SW-20,	Surface water	Wenck
Exterior soil vapor sampling	October 28, 2019	SV-16 through SV-23	Vapor	Midwestern
Installation of monitoring well adjacent to Lambert Creek	November 21, 2019	MW	NA	Midwestern
Second round exterior vapor sampling	December 2-5, 2019	SV-1 through SV-23	Soil vapor	Midwestern
Interior and exterior soil/groundwater borings	December 2-13, 2019	GP-19 through GP-33 and SB-8 through SB-17	Soil and groundwater	Midwestern
Reinstall coating room vapor pins	December 19, 2019	SV-10-2 through SV-15-2, SV-19-2 and SV-20-2	NA	Wenck
Sample coating room vapor pins	December 23 and 26, 2019	SV-10-2 through SV-15-2, SV-19-2 and SV-20-2	Sub-slab vapor	Wenck
Resample exterior vapor locations	January 9-10, 2020	SV-2 & 3, SV-5, SV-7 through SV-15, SV-22 and SV-23	Soil vapor	Thein

Procedures for soil, groundwater and vapor sampling activities followed Wenck's Standard Operating Procedures (SOP) dated June 2016, the MPCA QAPP dated September 2014 and the. Standard operating procedures were adhered to and methods and procedures are described below. Deviations from the approved SRI Work Plan during the implementation of the work are described below in Section 5.4.

5.3 DEVIATIONS FROM APPROVED SRI WORK PLAN

Deviations from the approved SRI activities (as discussed in the "*Supplemental Remedial Action Work Plan*" dated August 2019) included the following:

1) The proposed soil boring in Coating Room #2 was not completed due to the presence of an unknown concrete slab encountered approximately 1-foot below present flooring. Unable to access soil with hand driven coring equipment.
2) Hand driven coring equipment was utilized in the coating room borings and cold forming areas due to low ceiling clearance (SB-1 through SB-7 and SB-17). A groundwater sample was collected at the top of the unconfined water table; however, vertical groundwater delineation was not possible at these locations.
3) Detailed evaluation of HVAC vapor hood operation and cycling and building pathway flow analysis was not completed during this SRI. A full building survey and HVAC evaluation will be submitted under a separate Vapor Response Action Implementation Report.
4) As was proposed in the May 2019 Remedial Investigation Work Plan, soil sampling within utility trenches behind the die cast units located in the Main Die Cast Area. As of the date of this report, that sampling has yet to be conducted. This work is currently underway as the building wide cleaning progresses. The utility trenches are being cleaned to a depth of 12-inches to 18-inches below the concrete slab and Wenck is advancing hand probes approximately every 25 feet along the trench. A supplement will be provided upon completion.
5) Site-specific surface water hardness samples were not collected during the SRI activities. Additional hardness samples are necessary to determine if the lead surface water risk-screening levels need adjustment.

The above activities will be completed as part of a future investigation phase(es).

5.4 SOIL SCREENING INVESTIGATION

During completion of the July 2019 RI lead was identified in the shallow soils at the Site at concentrations in excess of Tier 2 Industrial SRV at several locations including GP-16 (0-1) and GP-18 (0-1). Additional horizontal and vertical delineation of lead impacts to the shallow soils at the Site was completed during this SRI.

The soil investigation activities were conducted between August 28th through December 13th, 2019. SRI activities included the advancement of 32 borings (17 interior borings (SB) and 15 exterior borings (GP)) over the course of the supplemental investigation. The 15 exterior borings GP-19 through GP-33 and the interior borings SB-8 through SB-16 were completed using Geoprobe push-probe methods. Due to limited access and ceiling clearance the eight (8) interior soil borings SB-1 through SB-7 and SB-17 were advanced in the coating rooms and cold forming room using Geoprobe hand-driven coring equipment.

The exterior push-probe soil borings GP-19 through GP-22 were completed by Thein Well Company (Thein) between August 28 to 30, 2019 and the interior hand-driven soil borings SB-1 through SB-7 were completed by Thein between October 4 to 7, 2019. Exterior push probe borings GP-23 through GP-33 and interior push-probe borings SB-8 through SB-16 were completed by Midwestern Drilling, LLC (Midwestern) between December 2 to 13, 2019. The interior hand-driven boring SB-17 was completed by Midwestern on December 10, 2019.

Field boring locations were placed based on the MPCA comments in the Remedial Investigation Summary letter dated August 8, 2019 and the MPCA-approved SRI Work Plan. The borings were generally placed around the northern perimeter of the property and to the south, east and west of the July 2019 RI borings. The locations of the public and private

underground utilities were verified prior to drilling to ensure the safe advancement of each boring. The locations of the borings are shown on Figure 3.

Interior and exterior push-probe soil borings were advanced to depths ranging from approximately 30 feet to 55 feet below grade. Soil was collected continuously in five-foot drives using a push-probe with a solid-barrel Macro-Core™ sampler. A new acetate liner was used for each five-foot sampling interval. Upon reaching each interval, the nature of the recovered soil was assessed to conduct soil classification and observe for evidence of potential contamination (i.e., odors, visible staining, etc.). The soil borings were terminated once the semi-confining clay layer was reached, which was encountered between 21 and 50 feet bg throughout the Site.

Geoprobe hand-driven coring equipment was used to complete eight interior boring locations, six (6) in the main coating room, one (1) in coating 2 and one (1) in the cold forming room. A slide hammer anvil was utilized to manually drive 1.25-inch probe rods in two-foot intervals. A new acetate liner was used for each two-foot sampling interval. Manual driven tooling was retrieved using a probe rod jack and the nature of the recovered soil was assessed to conduct soil classification and observe for evidence of potential contamination. The manual borings were completed to the water table (between 10 and 12 feet bg).

Soil samples were collected from the acetate sleeves by hand using clean dedicated nitrile gloves. A portion of the sample was placed into dedicated sealable polyethylene storage bags for headspace screening. Vapor headspace readings were collected from the first plastic storage bag using a PID equipped with a 10.6 eV source lamp calibrated to an isobutylene gas standard. Soil samples from each boring were collected in dedicated glassware, placed in a cooler with ice and submitted under chain-of-custody control to Pace Analytical Services, LLC (Pace) for laboratory analysis. Samples sent to the laboratory were analyzed for lead by EPA Method 6010D and VOC by EPA Method 8260B.

Upon completion of all sampling activities, each environmental borehole was appropriately abandoned in accordance with MDH sealing requirements. A boring log was created for each soil boring showing stratigraphic sequence and associated field screening notes and observations (Appendix A). Geographic coordinates for each sampling location are summarized in Table 1. A boring summary table is included as Table 2.

The boring location rationale and analytical parameters sampled for soil are as follows, sample depths were selected based on field observations and the depth of the water table:

Boring ID	Rationale	Sample Depth	Laboratory Analysis
GP-19	Boring advanced along the western perimeter of the property (along Otter Lake Road) to assess potential impacts in an assumed cross-gradient position relative to the North Campus facility. Field screening only and groundwater sampling only, no soil analytical samples collected.	NA	NA
GP-20	Boring advanced along the northwestern perimeter of the property to assess potential impacts upgradient of the North Campus facility. Field screening only and groundwater sampling only, no soil analytical samples collected.	NA	NA

Boring ID	Rationale	Sample Depth	Laboratory Analysis
GP-21	Boring advanced along the northern perimeter of the property (along Whitaker Street) to assess potential impacts upgradient of the North Campus facility. Field screening only and groundwater sampling only, no soil analytical samples collected.	NA	NA
GP-22	Boring advanced on the northeast corner the property (along Whitaker Street) to assess potential impacts upgradient of the North Campus facility. Field screening only and groundwater sampling only, no soil analytical samples collected.	NA	NA
GP-23	Boring advanced northeast of the North Campus building to assess potential impacts upgradient of the facility.	0-1′ 5-7.5′	Pb VOC
GP-24	Boring advanced northwest of the North Campus building to assess potential impacts upgradient of the facility.	0-1′ 5-7.5′	Pb Pb, VOC
GP-25	Boring advanced west of the North Campus building to further delineate TCE impacts identified in GP-3 during the July 2019 RI.	0-1′ 0-2.5′ 7.5-10′	Pb VOC VOC
GP-26	Boring advanced southwest of the North Campus building to further delineate the extent of TCE impacts identified southwest of the facility during the July 2019 RI.	0-1′ 5-7′ 12.5-15′	Pb VOC, Pb VOC
GP-27	Boring advanced adjacent to the southwest corner of the North Campus building to further assess and delineate TCE impacts identified during the July 2019 RI.	0-1′ 5-7.5′	Pb VOC
GP-28	Boring advanced southwest of the North Campus building to further delineate the extent of TCE impacts identified southwest of the facility during the July 2019 RI.	0-1′ 2.5-4′	Pb & DUP120619-A (0-1 duplicate) VOC
GP-29	Boring advanced south of the North Campus building to further assess and delineate the extent of TCE impacts downgradient of the facility.	0-1′ 1-2′	Pb VOC
GP-30	Boring advanced in the wetland area southeast of the North Campus building to further assess and delineate the extent of TCE impacts downgradient of the facility.	0-1′ 2-4′ 25-27′	Pb VOC
GP-31	Boring advanced in the wetland area southeast of the North Campus building to further assess and delineate the extent of TCE impacts downgradient of the facility.	0-1′ 1-3′	Pb VOC
GP-32	Boring advanced in the wetland area southeast of the North Campus building to further assess and delineate the extent of TCE impacts downgradient of the facility.	0-1′ 20-22′	Pb VOC
GP-33	Boring advanced east of the North Campus building, adjacent to eastern stormwater pond to further assess potential impacts in an assumed cross-gradient position relative to the North Campus facility.	0-1′ 4-5′	Pb VOC
SB-1	Boring advanced in the main coating room to assess potential impacts associated with historic TCE use/storage and coating operations.	0.5-1′ 6-6.5′	Pb VOC

Boring ID	Rationale	Sample Depth	Laboratory Analysis
SB-2	Boring advanced in the main coating room to assess potential impacts associated with historic TCE use/storage and coating operations.	0.5-1′ 6-8′	Pb VOC
SB-3	Boring advanced in the main coating room to assess potential impacts associated with historic TCE use/storage and coating operations.	0.5-1′ 6-8′	Pb VOC
SB-4	Boring advanced in the main coating room to assess potential impacts associated with historic TCE use/storage and coating operations.	0-1′ 6-8′	Pb VOC
SB-5	Boring advanced in the main coating room to assess potential impacts associated with historic TCE use/storage and coating operations.	0-1' 6-8′	Pb & DUP100419-B (0-1 duplicate) VOC
SB-6	Boring advanced in the main coating room to assess potential impacts associated with historic TCE use/storage and coating operations.	0-1 6-8′	Pb VOC & DUP100419C 6-8 (duplicate)
SB-7	Boring advanced in coating 2 room to assess potential impacts associated with historic TCE use/storage and coating operations.	0-1′ 8-10′	Pb VOC
SB-8	Boring advanced in the gravity cast room to assess potential impacts associated with historic TCE use/storage.	0-1′ 5.5-7.5′ 25-27′	Pb VOC VOC
SB-9	Boring advanced in shipping and receiving to further evaluate the extent and magnitude of residual impacts associated with historic TCE use/storage identified during previous investigations associated with VP5540.	0-1′ 8-10′ 30-32′	Pb VOC VOC
SB-10	Boring advanced in shipping and receiving to further evaluate the extent and magnitude of residual impacts associated with historic TCE use/storage identified during previous investigations associated with VP5540.	5′ 8-10′	Pb VOC
SB-11	Boring advanced in the main die cast area to assess potential impacts associated with historic TCE use/storage and downgradient of current coating operations.	0-1′ 8-10′ 15-17′	Pb VOC VOC
SB-12	Boring advanced in shipping and receiving to further evaluate the extent and magnitude of residual impacts associated with historic TCE use/storage identified during previous investigations associated with VP5540 and potential impacts downgradient of current coating operations.	0-1′ 8-10′	Pb VOC
SB-13	Boring advanced in shipping and receiving to further evaluate the extent and magnitude of residual impacts associated with historic TCE use/storage identified during previous investigations associated with VP5540 and potential impacts downgradient of current coating operations.	0-1′ 11-13′ 16-18′	Pb VOC VOC

Boring ID	Rationale	Sample Depth	Laboratory Analysis
SB-14	Boring advanced in shipping and receiving to further evaluate the extent and magnitude of residual impacts associated with historic TCE use/storage identified during previous investigations associated with VP5540.	0-1′ 10-12.5′	Pb VOC
SB-15	Boring advanced in the east die cast area to assess potential impacts associated with historic TCE use/storage.	0-1′ 12.5-15′	Pb VOC
SB-16	Boring advanced in shipping and receiving to further evaluate the extent and magnitude of residual impacts associated with historic TCE use/storage identified during previous investigations associated with VP5540.	0-1′ 12.5-15′	Pb VOC
SB-17	Boring advanced in cold forming to assess potential impacts associated with historic TCE use/storage and downgradient of current coating operations.	0-1′ 11-13′	Pb VOC

Per the approved SRI work plan, soil samples for VOC analysis were collected at the interval(s) revealing the highest PID response or at intervals revealing visual evidence of potential contamination. If there was evidence of potential contamination in a soil boring, Wenck attempted to collect a second sample at a deeper interval from the soil boring if evidence of potential contamination terminated before water was encountered. In the absence of obvious soil impacts (i.e., elevated PID readings) a soil sample was collected just above the observed unconfined water table. Field observations and PID observations are included in the boring logs included in Appendix A.

Per the approved SRI work plan, a minimum of one soil sample was collected from each boring location for total lead analysis by EPA Method 6010D. Total lead samples were collected from the zero to one-foot zone at each boring location. Deeper samples for total lead analysis were collected if field-evidence of contamination are observed. Field observations are included in the boring logs included in Appendix A.

5.5 GROUNDWATER SCREENING INVESTIGATION

Groundwater quality data collected during the July 2019 RI identified TCE and VC at concentrations exceeding their respective HRLs in shallow groundwater at the Site. Suspected VOC source areas include the coating and chemical storage areas identified as AOC-1, AOC-2 and AOC-3, investigated during the July 2019 RI. The distribution of the impacts near and down-gradient (south and southeast) of the suspected historic source areas located beneath the Site building indicates a southerly to southwesterly groundwater flow direction. During completion of this SRI additional push-probe groundwater samples were collected upgradient, down-gradient and within the AOCs referenced above to further delineate the vertical and horizontal extent of groundwater impacts in excess of the HRLs identified during the July 2019 RI.

Groundwater sampling was completed between August 28, 2019 and December 13, 2019. A total of 221 groundwater samples were collected during this phase of investigation. Groundwater depths varied between approximately 0.8 feet below grade to approximately 11.5 feet below grade across the Site. The height of the water column varied from

approximately 17 to 49 feet below grade. Groundwater sample locations are shown on Figure 4. Geographic coordinates for each sampling location are summarized in Table 1.

Discrete groundwater samples were collected in a separate hole location (from soil probe) within approximately five feet of the soil boring hole using a Geoprobe™ Screen Point 15 (SP-15) stainless-steel screen and drive rods. Teflon® tape was used at each of the drive rod threaded joints to prevent water infiltration from shallower groundwater. To facilitate groundwater sample collection, the SP-15 screen-point sampler was used for sampling groundwater at all locations with the exception of S-1 through SB-7 and SB-17 where temporary wells were constructed using 1-inch PVC riser 5-foot slotted PVC screens. The SP-15 sampler was driven to the shallowest desired sampling depth, based on lithology and PID readings. The screen was generally placed such that bottom of the screen was approximately three feet below the initial water table and then every five feet thereafter. The rods and screen sheath were then retracted to expose a minimum of two feet and a maximum of five feet of stainless-steel sampling screen. The length of screen exposed was dependent on the availability of water. In more permeable zones a smaller section of the screen was exposed as an adequate amount of water was available for sampling. If the zone was less permeable a larger section of screen was exposed in order to obtain enough water for sampling.

At each well screen sampling depth, a minimum of three sample tube volumes were purged prior to sample collection using a check ball and dedicated polyethylene tubing. After purging, groundwater samples were collected from each well screen directly into laboratory-provided dedicated glassware, placed in a cooler with ice and submitted under chain-of-custody control to for laboratory analysis for VOCs using EPA Method 8260. Blind duplicate and trip blank samples were submitted with the groundwater samples for QA/QC purposes. After each screened interval was sampled, the groundwater sampler was retracted, and the screen and all rod equipment were decontaminated. A new drive point was then installed to allow the screen to be re-driven through the borehole to the next deeper progressive depth for sampling.

All reusable sampling equipment was cleaned with Alconox® solution and triple-rinsed with deionized water between temporary well screen intervals. The boreholes were sealed by the drilling contractor as the drive rods were retracted from the final well interval depth in accordance with MDH regulations.

A general groundwater sampling summary is provided below:

Boring ID	Boring Depth	Screen Depth	Groundwater Laboratory Analysis
GP-19	30	4-7′ 12-14′ 19-21′	VOC DUP082819 (12-14′ duplicate)
GP-20	36	6-10′ 15-17′ 22-24′ 29-31′ 34-36′	VOC
GP-21	35	9-12′ 17-19′ 24-26′ 31-34′	VOC

Boring ID	Boring Depth	Screen Depth	Groundwater Laboratory Analysis
GP-22	30	10-14′ 19-21′ 24-28′	VOC DUP083019 (19-21′ duplicate)

5.6 SOIL VAPOR SCREENING INVESTIGATION

The results of the July 2019 RI identified TCE soil vapor concentrations above the MPCA's Industrial EISVs beneath the North Campus building. Additionally, the VOC trans-1,2-DCE, which is the primary component of the current solvent used by Water Gremlin in their coating process, was identified at high concentrations in sub-slab soil vapor samples collected from locations beneath the building during the July 2019 RI. Based on the findings of the July 2019 RI, immediate interim response actions to mitigate potential vapor intrusion to the north manufacturing building were required at the Site. On August 15, 2019, Water Gremlin submitted a proposed plan to the MPCA to construct an interim vapor mitigation system consisting of a combined sub-slab depressurization system (SSDS) and a soil vapor extraction system (SVE). Vapor sampling during this SRI was completed concurrently with vapor mitigation efforts. A full summary of Vapor Response Actions will be provided to the MPCA for review and comment under separate cover.

Additional vapor sampling was completed as part of this SRI to further investigate previously un-investigated areas within the North Campus building, to delineate the extent of soil vapor impacts/sub-slab soil vapor plume(s) and to fully evaluate the vapor intrusion risk pathway.

5.6.1 Exterior Soil Vapor Sampling

Two rounds of exterior soil vapor samples were collected to assess heating and non-heating seasonal vapor conditions throughout the Site on August 23-30, 2019, October 28, 2019, December 2-5, 2019 and January 9-10, 2020. The vapor samples SV-1 through SV-15 were completed by Thein August 23-30, 2019, vapor samples SV-15 through SV-23 were completed by Midwestern October 28, 2019. The second heating season round of soil vapor samples (SV-1 through SV-23) were collected by Midwestern December 2-5, 2019. Additionally, select locations were resampled by Thein January 9-10, 2020.

Soil vapor sample tooling was advanced to five feet below grade and the rod was then pulled back three feet to create a void space for sampling. The top of the hole around the rod was then grouted to seal the sample space from the above ground atmosphere. Dedicated polyethylene tubing was then placed down the rod and connected to a fitting at the rod tip.

Laboratory provided purge manifold assemblies were utilized at all sample locations. The purge manifold sampling train was then connected to the Summa can as follows: A two-way valve was connected to the vapor pin and a three-way valve was connected in-line between the two-way valve and the Summa canister. A syringe for purging was then connected to the three-way valve using new silicone tubing. This setup allowed the sample train to be a closed system, not allowing ambient air to contaminate or dilute the sample. A shut-in test was performed prior to sampling at each location to ensure each the system was free of leaks.

Following completion of the shut-in test, at least three volumes of air were purged out of the sample line with a syringe prior to collecting the sample. The samples were collected in 1-L Summa canisters equipped with 200 mL per minute fill regulators and dedicated in-line moisture filters. The soil vapor samples were submitted under chain-of-custody control to Pace for analysis of VOCs by method TO-15. A PID equipped with a 10.6 eV source lamp was connected to the tubing for field screening purposes upon the completion of the Summa

can sample collection. The locations of the soil vapor probes are shown on Figure 5. Soil Vapor Field Sampling forms are included in Appendix B.

The soil vapor probe location rationale and analytical parameters sampled for soil vapor are as follows:

Vapor Probe ID	Sample Depth	Sample Dates	Rational	Laboratory Analysis	PID Reading (ppm)

5.6.2 Sub-Slab Vapor Sampling

Thirteen additional permanent sub-slab vapor pins were advanced throughout the North Campus building between August 23 and October 10, 2019 using the Vapor-Pin™ kit methodology for permanent sub-slab vapor sampling ports. The permanent pins were installed by drilling a 5/8-inch hole through the concrete slab using a rotary-hammer drill. After the 5/8" hole was drilled, a larger diameter drill bit was used to countersink the

permanent sample pin beneath the floor surface. After the holes were drilled a brass vapor pin was equipped with the silicone sleeve and placed in the 5/8" hole. The silicone sleeve provides an airtight contact between the pin and the concrete borehole. After the pin was installed, a small piece of dedicated polyethylene tubing was placed on the pin tip. The sampling pin installation was allowed to equilibrate for approximately one-half hour prior to sample collection.

Prior to sampling a water dam test was completed at each location by placing deionized water within the larger diameter hole around the vapor pin. The water dam remained in place until the entire process finished. Laboratory provided purge manifold assemblies were utilized at all sample locations. The sampling train was then connected to the Summa can as follows: A two-way valve was connected to the vapor pin and a three-way valve was connected in-line between the two-way valve and the Summa canister. A syringe for purging was then connected to the three-way valve using new silicone tubing. This setup allowed the sample train to be a closed system, not allowing air inside the building to contaminate or dilute the sample. Shut-in tests were performed prior to sampling at each location to ensure each the system was free of leaks.

Following completion of the shut-in test, at least three volumes of air were purged out of the sample line with the syringe prior to sample collection. The samples were collected in 1-L summa canisters equipped with 200 ml/min flow regulators and dedicated in-line moisture filters. The sub-slab vapor samples were submitted under chain-of-custody control to Pace Analytical for analysis of VOCs by method EPA TO-15. A PID equipped with a 10.6 eV source lamp was connected to the tubing for field screening purposes upon the completion of the summa can sample collection. Sub-slab soil vapor locations are shown on Figure 6. Soil Vapor Field Sampling forms are included in Appendix B.

Multiple sub-slab samples were collected from various locations throughout the course of this investigation. A general soil vapor sampling summary is provided below:

5.6.3 Paired Indoor Air and Sub-slab Sampling

Paired indoor air and sub-slab samples were collected as part of this investigative effort at select locations on September 16-17, October 2-3, 2019 and October 9-10, 2019. Additionally, ambient air samples were collected from the exterior of the building to evaluate background air conditions during each sampling event. As a condition of the January 17, 2020 Administrative Order (AO) VOC coater restart, Water Gremlin prepared a work plan for the collection of sub-slab and paired indoor air samples. The results related to this sampling program will be submitted to the MPAC under separate cover in the Interim Response Action Implementation Summary Report.

Indoor and ambient air samples were collected using laboratory-provided individually certified 6-L Summa canisters, each equipped with a 24-hour flow controller. The sample intake (end of tubing) was placed approximately 1 to 5 feet from the floor for sample collection. After opening the valve on the Summa canister, Wenck revisited the sampling canisters 23 hours later to ensure the canisters maintained sufficient vacuum throughout the sampling duration.

During the sampling activities the indoor air samples were collected prior to the sub-slab samples in an effort to eliminate potential cross-contamination. Sub-slab samples were collected were collected in 1-L summa canisters equipped with 200 ml/min flow regulators and dedicated in-line moisture filters. The ambient air and sub-slab sampling canisters were submitted under chain-of-custody control to Pace Laboratory for analysis of VOCs by EPA TO-15 method. The following table summarizes paired sampling events:

Air Sample ID	Sample Dates	Sample Location	Sample Intake Height	Paired Sub-slab Sample

IA-15	10/9-10/2019	Shipping and Receiving	4.5′	SS-36

The sample locations are shown on Figure 6. Sub-slab and ambient air field sampling sheets are attached in Appendix B.

5.7 SEDIMENT SAMPLING

During the July 2019 RI of the Site, lead was identified at concentrations in excess of the Tier 1 SQT along the north bank of Lambert Creek and above the Tier 2 SQT within the east

stormwater retention basin. Sediment samples were collected east of the previous sample locations and the east stormwater pond during this SRI to further evaluate the nature of the lead identified during the July 2019 RI. Specifically, the additional lead sampling was completed to determine if lead concentrations observed on the property are consistent with a naturally occurring lead concentrations and determine if levels exceed appropriate risk criteria.

Sediment samples were collected from the upper 0.5′ to 1′ of sediment along Lambert Creek using a hand push-probe sampling device on October 23-24, 2019. Wenck collected 14 samples from the eastern portion of the property, three (3) from inlets south and southeast of Lambert Creek, one (1) from the south discharge of the southwest stormwater pond, and two (2) south of the east stormwater pond (between the east stormwater pond discharge and Lambert Creek). The sediment sample locations are shown on Figure 7 and geographic coordinates for each sampling location are summarized in Table 1. The sediment samples were collected directly in dedicated glassware, placed in a cooler with ice and submitted under chain-of-custody control to Pace Analytical for laboratory analysis of lead by EPA Method 6020. Blind duplicate and trip blank samples were submitted with the sediment samples for QA/QC purposes.

A general sediment summary is provided below:

Sample ID	Sample Location	Sample Collection Date	Laboratory Analysis
Sed-9	South discharge point of the southwest stormwater pond	10/23/2019	Pb
Sed-10	South of the east stormwater pond, between the east stormwater pond discharge and County Ditch 14	10/23/2019	Pb
Sed-11	South of the east stormwater pond, between the east stormwater pond discharge and County Ditch 14	10/23/2019	Pb
Sed-12	North bank of County Ditch 14 on the eastern portion of the property	10/23/2019	Pb
Sed-13	North bank of County Ditch 14 on the eastern portion of the property	10/23/2019	Pb
Sed-14	North bank of County Ditch 14 on the eastern portion of the property	10/23/2019	Pb
Sed-15	North bank of County Ditch 14 on the eastern portion of the property	10/23/2019	Pb
Sed-16	North bank of County Ditch 14 on the eastern portion of the property	10/23/2019	Pb
Sed-17	Southeastern inlet	10/23/2019	Pb
Sed-18	Southeastern inlet	10/23/2019	Pb
Sed-19	South inlet	10/24/2019	Pb
Sed-20	North bank of County Ditch 14 on the northeastern portion of the property	10/24/2019	Pb
Sed-21	North bank of County Ditch 14 on the northeastern portion of the property	10/24/2019	Pb

Sample ID	Sample Location	Sample Collection Date	Laboratory Analysis
Sed-22	North bank of County Ditch 14 on the northeast corner of the property	10/24/2019	Pb

5.8 SURFACE WATER SAMPLING

Wenck collected 14 surface water samples from the Lambert Creek on the eastern portion of the property, three (3) from inlets south and southeast of County Ditch 14, one (1) from the south discharge of the southwest stormwater pond, and two (2) south of the east stormwater pond (between the east stormwater pond discharge and Lambert Creek). Additionally, two (2) roof drain downspout samples were collected during a rain event on October 21, 2019 to assess the stormwater runoff from the North Campus building roof that enters the East stormwater pond. The water samples were collected using a dedicated disposable polyethylene bailer October 23-24, 2019. Locations of surface water samples are depicted on Figure 8 and geographic coordinates for each sampling location are summarized in Table 1. The surface water samples were collected directly in dedicated glassware, placed in a cooler with ice and submitted under chain-of-custody control to Pace Analytical for laboratory analysis of lead by EPA Method 6020. Blind duplicate and trip blank samples were submitted with the sediment samples for QA/QC purposes.

A general surface water soil sampling summary is provided below:

Sample ID	Sample Location	Sample Collection Date	Laboratory Analysis
Downspout #1	Eastern roof downspout	10/21/2019	Pb
Downspout #2	Southwestern roof downspout	10/21/2019	Pb
SW-7	South discharge point from the southwest stormwater pond	10/23/2019	Pb
SW-8	South of the east stormwater pond, between the east stormwater pond discharge and County Ditch 14	10/23/2019	Pb
SW-9	South of the east stormwater pond, between the east stormwater pond discharge and County Ditch 14	10/23/2019	Pb
SW-10	North bank of County Ditch 14 on the eastern portion of the property	10/23/2019	Pb
SW-11	North bank of County Ditch 14 on the eastern portion of the property	10/23/2019	Pb
SW-12	North bank of County Ditch 14 on the eastern portion of the property	10/23/2019	Pb
SW-13	North bank of County Ditch 14 on the eastern portion of the property	10/23/2019	Pb
SW-14	North bank of County Ditch 14 on the eastern portion of the property	10/23/2019	Pb
SW-15	Southeastern inlet	10/23/2019	Pb
SW-16	Southeastern inlet	10/23/2019	Pb

Sample ID	Sample Location	Sample Collection Date	Laboratory Analysis
SW-17	South inlet	10/24/2019	Pb
SW-18	North bank of County Ditch 14 on the northeastern portion of the property	10/24/2019	Pb
SW-19	North bank of County Ditch 14 on the northeastern portion of the property	10/24/2019	Pb
SW-20	North bank of County Ditch 14 on the northeast corner of the property	10/24/2019	Pb

5.9 Monitoring Well Installation

On November 21, 2019 a permanent monitoring well was completed along the north bank of Lambert Creek, south of the North Campus Building. A staff gauge was also installed adjacent to the shallow monitoring well in the north bank of Lambert Creek to monitor creek levels. Multiple water level measurements were collected from the well and gauge between November 21, 2019 and February 2020 to assess the interaction between the shallow unconsolidated groundwater aquifer and the downgradient Lambert Creek and further evaluate the potential risk of the creek to exposure of VOCs and lead.

Prior to completion of the well, a pilot push-probe soil boring was completed to 15-feet bg to conduct soil classification and field screening with a PID. The monitoring well boring log showing stratigraphic sequence and associated field screening notes and observations is included in Appendix A.

The well was completed by Midwestern using hollow stem auger (HSA) drilling techniques to 12-feet bg and screened across the water table aquifer for monitoring the level of the water table aquifer adjacent to the creek. The well was constructed with new, two (2)-inch inside diameter, flush-threaded Schedule 40 PVC casing and a 10-foot #10 slot (or 0.010-inch) well screen. The was filter-packed with sand pack to one foot above the top of the screen. Bentonite pellet seal was installed one-foot above the sand pack to protect the screen and filter pack from grout intrusion. The remaining annular space was filled with high-solids bentonite grout. The well was be equipped with a vented riser cap, and a locking cover. A steel (six-inch diameter by six-feet in length) protective pipe was cemented to a concrete apron to prevent the riser from damage.

The monitoring well and stream gauge were surveyed on December 3, 2019 and the geographic coordinates are summarized in Table 1. The monitoring well construction detail is included in Appendix B.

6.0 Investigation Results

6.1 SOIL

6.1.1 Surficial Geology

During the SRI activities, 32 push probe and eight (8) hand driven soil borings were advanced across the property to obtain geologic information. Soil boring locations are shown in Figure 4. Soil boring logs were prepared for each boring and are included in Appendix A. A cross-section location map is depicted in Figure 10, and geologic cross-sections of the Site are provided in Figures 11 through 14.

White Bear Lake Township is located within quaternary-aged glacial deposits that overly Paleozoic sedimentary formations. Surficial deposits in the vicinity of the Site consist of glacial sandy lake sediments, outwash, and tills associated with the Grantsburg Sub-lobe deposited during the Late Wisconsinian ice advance and glacial tills and outwash deposited by the Wisconsin-age Superior Lobe. Organic deposits associated with wetlands commonly overlay glacial deposits. These sediments accumulate in poorly drained areas to form peat and are common along Lambert Creek (US Geological Survey 1994).

The unconsolidated glacial deposits overlay Ordovician St. Peter Sandstone and Prairie du Chien sedimentary bedrock units located approximately 200 feet bg.

Soil profiles across the Site were generally consistent with previous investigation results. Surficial fill soils consisting primarily of dark brown silty with gravel were identified in the upper 3 to 5 feet of the exterior borings G-19, GP-22, GP-23, GP-24, GP-25, GP-26, and GP-33. Minor amounts of brick and slag was observed in the upper 4 feet of GP-24 and traces of concrete debris was observed in the upper 5 feet of GP-33.

Approximately 2 to 12.5 feet of fill soils were observed in the interior borings SB-1 through SB-17. Traces of concrete and slag debris was observed in the upper 2 feet of SB-4, SB-5 and SB-6 completed within the main coating room. Approximately 10 feet of fill soils with traces of concrete debris was observed in SB-7 completed in Coating 2. In the shipping and receiving area a concrete slab likely associated with a former loading dock was encountered from approximately 4 to 5 feet at SB-10 and concrete debris was observed in the upper 7 to 10 feet at SB-9 and SB-12.

Shallow fill is generally underlain by water bearing granular sediments comprised of poorly graded fine sand and silty sand. In general, the thickness of the granular sediments varied from 15 to 32 feet thick on the north-northeastern portions of the Site, from 10 to 25 feet thick in interior soil borings, and from 5 to 10 feet thick on the southern portions of the Site. Organic sediments and peat were encountered in the upper 5 to 10 feet of the soil borings GP-29, 30, 31 and 32, completed in the wetland area to the south and southeast of the North Campus building.

Silt and clay content typically increased with depth at each boring location and the material below the organic wetland sediments and unconsolidated sandy materials described above, primarily consisted of very fine organic silt and clay sediments indicative of lacustrine deposits. These fine silty and clayey sediments contained highly laminated beds of silts, clays and very fine sands. Alternating layers which varied from thin lenses to 2 to 4 feet in

thickness of silt, silty sand, clayey sand, fat clay and lean clay were encountered to the boring terminus and saturated lenses were commonly encountered within the alternating layers.

In general, the clay content increased with depth and fewer lenses of granular sediments were observed at depths below 30-feet bg. Borings were terminated when non-water bearing clay and/or silt was encountered. However, saturated conditions were commonly observed within the silty/clayey sediments and groundwater samples were collected at depths greater than 40-feet bg at the boring locations GP-24, GP-25, GP-26, GP-27, GP-28 and GP-29.

Groundwater levels were measured between 0.8 to 11.5 feet bg at the Site during completion of this investigation. The height of the water column observed in the unconsolidated sediments overlaying the semi-confining clay layer averaged 20 feet in thickness in the interior borings and was observed from approximately 17 to 49 feet in the exterior borings GP-19 through GP-33.

6.1.2 Field Screening Results

Soil headspace readings and field observations are included on the soil boring logs in Appendix A. Total organic vapor screening results ranged from non-detect to 248.7 parts-per-million (ppm) in the soil borings GP-19 through GP-33 completed throughout exterior portions of the Site and SB-1 through SB-17 completed within the North Campus building. The highest PID readings were observed in the borings completed in the main coating room and along the southwestern portion of the building.

In GP-22 a slightly elevated PID reading of 51.2 ppm was noted from 3 to 5 feet. The upper soils at GP-22 exhibited high organic contents and buried wood chips were encountered.

In GP-26 PID readings ranged from 24.9 to 224 ppm from 5 to 7 feet and a chemical odor was noted. Readings of 13.1, 10.8 and 11.2 ppm were noted from 7 to 15 feet bg and the remaining readings below 15 feet bg did not exceed background (10 ppm) in GP-26.

In SB-2 slightly elevated PID readings of 11 to 13.5 ppm were encountered from the surface to the boring terminus at 10 feet bg.

In SB-5 PID readings 11.1 ppm from 0-2 feet bg and 22.7 ppm from 6-8 feet bg were noted.

In SB-6 a PID reading of 44.5 was recorded from 6-8 feet bg and a reading of 11.3 ppm was recorded from 8-10 feet bg.

In SB-13 a PID reading of 15.3 was recorded from 17-20 feet bg

Per the approved SRI Work Plan, soil samples for VOC analysis were collected at the interval(s) revealing the highest PID response or at intervals revealing visual evidence of potential contamination. If there was evidence of potential contamination in a soil boring, Wenck attempted to collect a second sample at a deeper interval from the soil boring if potential contamination terminated before water was encountered. In the absence of obvious soil impacts (i.e., elevated PID readings) a soil sample was collected just above the observed unconfined water table.

6.1.3 Soil Analytical Results

Soil lead and VOC data were compared to the Minnesota Pollution Control Agency's Tier 2 Industrial Soil Reference Values (SRVs) and Soil Leaching Values (SLVs) for evaluation of potential risk to groundwater at the Site from the soil-to-groundwater leaching pathway.

Lead
Lead was detected above laboratory reporting limits in all 31 of the soil samples collected during the July 2019 RI. The SRI identified lead above laboratory reporting limits in 14 of the exterior and 18 of the interior soil samples collected and analyzed for lead.

Concentrations of lead exceeded the Industrial SRV of 700 mg/kg at SB-5 (0-1′) at 1,860 mg/kg and in SB-11 (0-1) at a concentration of 1,060 mg/kg. Lead was detected above the Tier 1 SLV of 2,700 mg/kg in DUP100419-B (blind duplicate of SB-5 (0-1)) at a concentration of 5,800 mg/kg, and in SB-6 (0-1) at a concentration of 13,600 mg/kg.

VOCs
VOCs were not detected above their respective laboratory reporting limits in any of the soil samples collected at the Site with the exception of GP-26 and SB-6. In the exterior sample collected at GP-26 (2-4′) p-Isopropyltoluene was detected above laboratory reporting limits at a concentration of 23.6 mg/kg, ethylbenzene was detected above laboratory reporting limits at a concentration of 0.30 mg/kg and toluene was detected at a concentration of 5.8 mg/kg above the SLV of 2.5 mg/kg for toluene. TCE was detected at a concentration of 0.12 mg/kg in the interior bring SB-6 (0-1) above the SLV of 0.0023 mg/kg and trans-1,2-dichloroethene was detected above laboratory reporting limits at a concentration of 0.11 mg/kg.

Cumulative soil sample results are summarized in Table 3 and depicted on Figures 15 and 16. Laboratory reports and supporting chain-of-custody documentation are included in Appendix C.

6.2 GROUNDWATER

6.2.1 Hydrogeology

During completion of the July 2019 RI groundwater levels were measured from 3.88 feet bg to 10.7 feet bg throughout the Site and during this SRI groundwater was measured between 0.8 and 11.5 feet bg. Shallow groundwater was observed from approximately 2.5 to 3 feet bg in the borings completed southwest of the North Campus building (GP-26 and GP-28) and near the surface (0.8 feet bg) in the borings completed in the wetland areas (GP-29, GP-30, GP-31 and GP-32). Groundwater levels ranged from 7.8 to 11.5 feet bg in the interior soil borings SB-1 through SB-17. The height of the water column observed in the unconsolidated sediments overlaying the semi-confining clay layer averaged 20 feet in thickness in the interior borings. The height of the water column was observed from approximately 17 to 49 feet above the top of the semi-confining clay layer in the exterior borings GP-19 through GP-33. Water levels are noted in the boring logs included as Appendix A and shown on cross-sections Figures 11 through 14.

6.2.2 Groundwater Analytical Results

Groundwater SRI data analysis compared detected concentrations of VOCs to the and Minnesota Department of Health's (MDH) Health Risk Limits (HRLs) and Health Based Values (HBVs) to assess potential human health risks from exposures to chemicals in groundwater.

VOCs

A total of 115 groundwater samples collected from the soil borings were analyzed for VOCs. VOC compounds including 1,1-DCA, 1,1-DCE, 1,2-DCA, chloroethane, acetone, ethylbenzene, toluene, TCE, p-isopropyltoluene, cis-1,2-DCE, trans-1,2-DCE and VC were detected above their laboratory reporting limits during this investigation.

1,1-DCA was detected above laboratory limits but below the HRL of 80 ug/L at GP-29 ((18-20), (25-27), (32-34)), GP-30 (8-10), SB-7 (6-11), SB-10 (17-19), DUP120319 (duplicate of SB-10 (23-25)), and SB-16 ((10-13), (25-27)). 1,1-DCA was detected above the MDH HRL in SB-10 (9-12) at a concentration of 126 ug/L.

The VOC 1,1-DCE was detected above laboratory limits but below the HRL of 200 ug/L at GP-29 (32-34).

1,2-DCE was detected above the MDH HRL of 1 ug/L at SB-10 (9-12) at a concentration of 1.01 ug/L. 1,1-DCA was also detected above the HRL of 80 ug/l at SB-10 (9-12) at a concentration of 126 ug/l.

Acetone was detected above laboratory reporting limits but below the MDH HRL of 5,000 ug/L at GP-26 (41-43), and SB-16 (25-27).

The VOC chloroethane was detected above laboratory reporting limits at GP-30 (8-10) at a concentration of 2.9 ug/L, and SB-10 (9-12) at a concentration of 156 ug/L. There is not an established HRL for chloroethane.

At GP-26 (6-10) and (41-43), ethylbenzene was detected above laboratory reporting limits but below the respective MDH HRL/HBV for ethylbenzene. Toluene was detected above the HBV of 70 ug/L at GP-26 (6-10) at a concentration of 101 ug/L and above laboratory reporting limits at the (22-24) and (41-43) intervals.

TCE was detected above the MDH HRL of 0.4 ug/L at the following concentrations in the exterior borings: 0.5 ug/L at GP-19 (19-21), 0.53 ug/L at GP-26 (6-10), 2.4 ug/L at GP-26 (15-17) and at 2.5 ug/L in the duplicate sample of GP-26 (15-17) DUP120519-A, 1.3 ug/L at GP-27 (17-19), 2.8 ug/L at GP-28 (18-12), 3.1 ug/L at GP-28 (25-27), 16.4 ug/L at GP-33 (6-10), 4.4 ug/L at GP-33 (15-17),

TCE concentrations exceeded the HRL at all interior borings completed within the coating rooms at the following concentrations: 29.9 ug/L at SB-1 (4-9), 68 ug/L at SB-2 (5-10), 50.1 ug/L at SB-3 (6-11), 79.2 ug/L at SB-4 (6-11) and at 83.4 ug/L in the duplicate of SB-4 (6-11) DUP100419-A, 74.7 ug/L at SB-5 (6-11), 37.8 ug/L at SB-6 (6-11), and 2.6 ug/L at SB-7 (6-11).

In the following interior borings TCE was detected above the HRL: SB-8 (7-10) at 3.35 ug/L, SB-9 (11-14) at 12.3 ug/L, SB-10 (17-19) at 1.17 ug/L, SB-11 (10-12) at 6.6 ug/L, SB-11 (17-19) at 5.9 ug/L, SB-12 (18-20) at 4.1 ug/L, SB-13 (10-13) at 2.8 ug/L, SB-13

(18-20) at 0.42 ug/L, SB-14 (10-13) at 1.6 ug/L, SB-15 (8-11) at 189 ug/L, SB-15 (16-18) at 20.8 ug/L, SB-15 (23-25) at 4.1 ug/L, and SB-16 (10-13) at 2.7 ug/L.

VC was detected above the MDH HRL of 0.2 ug/L in GP-29 (32-34) at 0.83 ug/L, SB-7 (6-11) at 4.4 ug/L, SB-10 (9-12) at 21.8 ug/L, and SB-16 at 0.71 ug/L.

The VOC cis-1,2-DCE was detected above laboratory reporting limits in SB-5 (6-11) at 1.7 ug/L, SB-6 (6-11) at 2.1 ug/L, SB-10 (17-19) at 1.14 ug/L, SB-15 (8-11) at 1.6 ug/L, SB-16 (10-13) at 3.1 ug/L, and SB-16 (25-27) at 1.2 ug/L. The detected concentrations of cis-1,2-DCE did not exceed their respective HRL of 6 ug/L.

The VOC p-isopropyltoluene was detected above laboratory reporting limits in the boring GP-19 (4-7), in the boring GP-26 at all sample intervals ((6-10), (15-17), (22-24), (29-31), (36-38), (41-43)), and in the bring GP-28 (11-13).

Trans-1,2-DCE was detected above laboratory limits but below the HRL in the coating room borings SB-1 (4-9) at 3 ug/L, SB-2 (5-10) at 1.7 ug/L, SB-3 (6-11) at 1.8 ug/L, SB-4 (6-11) at 2.4 ug/L and at 2.6 ug/L in the duplicate sample of SB-4 (6-11) DUP100419-A, at 14.9 ug/L at SB-6 (6-11). The detected concentration of 51.9 ug/L identified in the coating room boring SB-6 (6-11) exceeds the HRL of 40 ug/L for trans-1,2-DCE. Trans-1,2-DCE was also detected above laboratory limits in the interior sample SB-13 (10-13) at 4.2 ug/L.

1,4-Dioxane

A total of 98 groundwater samples collected from the soil borings were analyzed for 1,4-dioxane by EPA method 8270.

1,4-Dioxane was detected above the MDH HRL of 1 ug/L at the following concentrations in the exterior borings: 1.4 ug/L at GP-23 (36-38), 2.4 ug/L at GP-24 (38-40), 2.2 ug/L at GP-26 (22-24), 2.3 ug/L at GP-26 (36-38), 7.4 ug/L at GP-26 (41-43), 1.4 ug/L at GP-27 (8-12), 5.8 ug/L at GP-27 (38-40), 1.1 ug/L at GP-28 (39-41), 2.7 ug/L at GP-28 (46-48), 2.3 ug/L at GP-29 (18-20), 1.6 ug/L at GP-29 (25-27), 1.3 ug/L at GP-29 (32-34), 4.2 ug/L at GP-29 (38-41), 1.3 ug/L at GP-30 (1-3), 12.4 ug/L at GP-30 (8-10), 1.9 ug/L at GP-30 (15-17), 10.1 ug/L at GP-30 (36-38), 1.0 ug/L at GP-31 (9-11) and 1.2 ug/L in the duplicate of GP-31 (9-11) DUP121219, 1.1 ug/L at GP-31 (16-18), 1.1 ug/L at GP-32 (1-3), 2.2 ug/L at GP-32 (21-24), 1.2 ug/L at GP-33 (21-24), and 1.2 ug/L at GP-33 (29-31).

In the following interior borings 1,4-dioxane was detected above the HRL: SB-10 (9-12) at 4.5 ug/L and SB-13 (34-36) at 2.0 ug/L.

Dissolved Lead

The eight groundwater samples collected from the coating room soil borings were collected and analyzed for dissolved lead by EPA method 6020. Lead was detected in SB-1 (4-9) at 1.8 ug/L, in SB-2 (5-10) at 0.24 ug/L, SB-3 (6-11) at 0.42 ug/L, SB-4 (6-11) at an estimated value of 0.57 ug/L, SB-5 (6-11) at 2.9 ug/L and SB-6 (6-11) at 3.5 ug/L.

Cumulative groundwater laboratory analytical results are summarized in Table 4. VOC data are also presented in plan view in Figure 17 and 18 and in cross-sectional view in Figures 11 through 14. Laboratory reports and supporting chain-of-custody documentation are included in Appendix D.

6.3 SOIL VAPOR

The soil vapor data was compared to the MPCA's 33x ISVs to evaluate potential vapor intrusion risk. These guidelines were developed by the MPCA and serve as the state regulatory screening values for vapor intrusion risk in residential and commercial/industrial settings. If soil gas concentrations are equal to or greater than 33x the applicable ISVs (Residential or Industrial), more thorough soil gas investigation and/or considerations for vapor mitigation may be required.

6.3.1 Exterior Soil Vapor Sampling Results

The exterior soil vapor data was compared to the MPCA's Residential and Industrial ISVs and 33x ISVs to evaluate potential vapor intrusion risk. Two rounds of exterior soil vapor samples were collected from 3-5-feet bg at 23 locations throughout the Site to assess heating and non-heating season vapor conditions. The first round of samples was collected between August and October 2019 and the second round of samples were collected between December 2019 and January 2020. Vapor probes SV-1 through SV-15 were specifically installed to evaluate the potential of vapor migration from the Site towards residential properties to the west, north and northeast.

Non-Heating Season Sample Results

Various VOCs were detected above laboratory reporting limits in the exterior soil vapor samples SV-1 through SV-23; however, none of the detected concentrations exceeded their respective 33X Residential ISVs. TCE was detected above 33x the Industrial ISV of 230 ug/m3 in the vapor sample SV-19, located adjacent to the south of the North Building at a concentration of 281 ug/m3. VC was detected in the vapor sample SV-20, located adjacent to the south of the North Building at a concentration of 559 ug/m3 and in the SV-20 duplicate sample DUP 10/28/19 at a concentration of 695 ug/m3 exceeding 33x the Residential ISV of 57 ug/m3 for VC.

Heating Season Sample Results

The second round of vapor sampling was completed between December 2-5, 2019 and the VOC PCE was detected above 33x the Residential ISV at multiple locations. PCE was detected above 33x the Residential ISV of 110 ug/m3 in SV-1 at 127 ug/m3, SV-2 at 122 ug/m3, SV-3 at 178 ug/m3, SV-8 at 152 ug/m3, SV-9 at 152 ug/m3, SV-10 at 130 ug/m3, SV-11 at 152 ug/m3, SV-12 at 137 ug/m3, SV-15 at 158 ug/m3, SV-17 at 169 ug/m3, SV-18 at 189 ug/m3, SV-19 at 179 ug/m3, and SV-23 at 145 ug/m3.

Additionally, naphthalene was detected at a concentration of 527 ug/m3 in SV-4 above 33x the Residential ISV of 310 ug/m3, and ethylbenzene was detected at a concentration of 145 ug/m3 in SV-18 above 33x the Residential ISV of 140 ug/m3.

PCE was not detected at concentrations exceeding 33x the Residential ISV at any sample location during the first round of soil vapor sampling. Additionally, PCE was not identified in soil or groundwater samples collected at the SRI boring locations. Since PCE has not been identified as a primary contaminant of concern at the Site based on the lack of previous detections, the soil vapor sample locations SV-1, SV-2, SV-3, SV-4, SV-5, SV-7, SV-8, SV-9, SV-10, SV-11, SV-12, SV-13, SV-15, SV-22 and SV-23 were resampled between January 9 and 10, 2020. VOCs were not detected at concentrations exceeding their respective 33x Residential/Industrial ISVs in any of the soil vapor sampled collected during the January 9-10, 2019 sampling event. Therefore, based on the lack of PCE detections identified at the resampled locations, the previous PCE detections from the December 2-5, 2019 sampling

event are not indicative of a release at the Site, but more likely is related to sampling equipment, laboratory equipment or other interference unrelated to an on-Site release.

Cumulative soil vapor laboratory analytical results are summarized in Table 5. Complete laboratory reports and supporting chain-of-custody documentation are included in Appendix C. VOC exceedances are presented in Figure 19.

6.3.2 Sub-Slab Vapor Sampling Results

The results of the July 2019 RI found TCE and trans-1,2-DCE soil vapor concentrations above the EISVs beneath the north manufacturing building. MPCA guidance specifies that if soil vapor concentrations are greater than EISVs then expedited active mitigation is necessary. Based on the results of the July 2019 RI, a SSDS was constructed to mitigate potential vapor intrusion into the North Campus facility building. Installation of the SSDS system began on August 23, 2019 and was completed and operational the week of September 9, 2019. The SSDS has been in continuous operation since the initial start-up and creates a negative pressure field below the building slab preventing vapors from entering the indoor air space. Interim Vapor Mitigation activities will be discussed in further detail in a separate Vapor Response Action Implementation Report.

Additional vapor sampling was completed as part of this SRI to further investigate previously un-investigated areas within the North Campus building. Thirteen additional permanent sub-slab vapor pins were advanced within the Northwest Die Cast, Main Die Cast, Lunchroom, Coining, Locker Rooms, East Die Cast, Shipping and Receiving and Gravity Cast areas of the North Campus building. Multiple sub-slab samples were collected pre and post mitigation from various locations throughout the course of this investigation. The sub-slab soil vapor data were compared to the MPCA's ISVs and EISVs for vapor intrusion risk appropriate for an industrial setting.

As a condition of the January 17, 2020 Administrative Order (AO) VOC coater restart, Water Gremlin prepared a work plan for the collection of sub-slab and paired indoor air samples. The results related to this sampling program will be submitted to the MPAC under separate cover in the Interim Response Action Implementation Summary Report.

<u>Additional Sample Location Results</u>
On August 23, 2019 12 additional sub-slab sample locations were completed within the Northwest Die Cast (SS-28 through SS-33), Main Die Cast (SS-27), Lunch Room (SS-35), Coining (SS-34), Locker Room (SS-26), East Die Cast (SS-37), Shipping and Receiving (SS-36) areas of the North Campus building and sampled for VOCs by method TO-15.

The sub-slab vapor samples collected beneath the building identified multiple VOC constituents above laboratory reporting limits, but below the associated ISV screening values with the exception of four locations.

TCE was detected above 33x the Industrial ISV of 230 ug/m3 in SS-27 at 268 ug/m3, SS-33 at 236 ug/m3 and about the EISV of 700 ug/m3 in SS-34 at 1,920 ug/m3.

VC was detected above the EISV of 7,300 ug/m3 in SS-37 at 22,100 ug/m3. The August 23, 2019 sampling event was completed prior to operation of the SSD system.

Trans-1,2-DCE was not detected above the site-specific ISVs in any of the samples collected August 23, 2019.

On October 10, 2019 the sub-slab sample location SS-38 was completed in the Gravity Cast area. Various VOCs were detected above laboratory reporting limits in SS-38; however, none of the detected parameters exceeded their respective 33x Industrial ISVs.

Additional Sub-slab Sampling September - October

Sub-slab sampling was completed at various locations throughout the North Campus building on September 16 and 17, 2019 (approximately 10-days following startup of the SSDS) and October 10, 2019. Sub-slab samples were collected at SS-2, SS-8, SS-9, SS-10, SS-11, SS-12, SS-13, SS-14, SS-15, SS-18, SS-19, SS-20, SS-22, SS-23, SS-24 and SS-25. Paired sample results from the September 16-17, 2019 sampling results are discussed below in Section 7.4.3.

Concentrations of TCE and/or trans-1,2-DCE generally decreased since the July 2019 RI sampling completed in June 2019 and are summarized in the table below (results reported in ug/m3).

Sample Location	TCE Results 6/11/19	TCE Results 9/16/2019	TCE Results 10/10/2019

Cumulative sub-slab soil vapor laboratory analytical results are summarized in Table 6. Complete laboratory reports and supporting chain-of-custody documentation are included in Appendix C. Sub-slab soil VOC exceedances are presented in Figure 20.

6.3.3 Paired Indoor Air and Sub-Slab Results

The outdoor ambient air data was used to evaluate background concentrations and indoor air data was compared to the MPCA's Vapor Intrusion Risk standards. A total of 17 indoor air samples (15 sample locations and two duplicates) and seven (7) exterior ambient air samples (six sample locations and one duplicate) were collected during the SRI activities and analyzed for VOCS by EPA Method TO-15.

The sample IA-1 was collected in the office area of the North Campus building and paired with the sub-slab sample SS-6, IA-2 was collected in the lunch room and paired with the sub-slab sample SS-35, and IA-3 was collected in the locker room and paired with the sub-slab sample SS-26 during the September 16-17, 2019 sampling event.

Paired samples were collected in the coating rooms October 3-4, 2019 as follows: IA-4 paired with SS-15, IA-5 paired with SS-14, IA-6 paired with SS-13, IA-7 paired with SS-12, IA-8 paired with SS-11, IA-9 paired with SS-10, IA-10 paired with SS-19.

During the October 9-10, 2019 sampling event IA-11 was collected from the gravity cast room and paired with the sub-slab sample SS-38, IA-12 was collected in the coining room and paired with the sub-slab sample SS-34, IA-13 was collected in the east die cast area and paired with the sub-slab sample SS-37, IA-14 was collected in the northwest die cast area and paired with the sub-slab sample SS-30 and IA-15 was collected in the shipping and receiving area and paired with the sub-slab sample SS-36.

Indoor Air Results

Various VOCs were detected above laboratory reporting limits in the indoor air samples. With the exception of TCE and trans-1,2-DCE none of the detected compounds exceeded their respective Industrial ISV. Trans-1,2-DCE is an active chemical used in the current manufacturing processes. Water Gremlin manages indoor air for *trans*-1,2-DCE under OSHA's Permissible Exposure Limits of 790,000 ug/m^3 or 200 ppm.

The VOC TCE was detected above the Industrial ISV of 7 ug/m3 at three sample locations within the coating rooms. TCE was detected above the Industrial EISV in IA-4 at a concentration of 71.2 ug/m3, in IA-5 at a concentration of 52.2 ug/m3, in IA-6 at a concentration of 50.9 ug/m3, in IA-7 at a concentration of 49.5 and above the Industrial ISV in IA-8 at a concentration of 14.9 ug/m3, IA-9 at a concentration of 14.5 ug/m3, and IA-10 at a concentration of 10.4 ug/m3.

Trans-1,2-DCE was detected in the coating room samples IA-4 at 746 ug/m3 in the coating room samples IA-5 at 422 ug/m3, IA-6 at 390 ug/m3, and IA-9 at 250 ug/m3.

The sample IA-3 completed in the locker room during the September 16-17, 2019 sampling event identified 1,2-trans-DCE at a concentration of 504 ug/m3.

In the sample IA-15 completed in the shipping and receiving area during the October 9-10, 2019 sampling event TCE was detected above the Industrial EISV at a concentration of

27.6 ug/m3 and trans-1,2-DCE was detected above the Industrial ISV at a concentration of 446 ug/m3.

TCE and trans-1,2-DCE paired sample results are summarized below (reported in ug/m3).

Building Location	Indoor Air Sample	TCE Results	Trans-1,2-DCE Results	Sub-slab Sample	TCE Results	Trans-1,2-DCE Results
Office	IA-1	5.2	3.9	SS-6	41.5	63.3
Lunchroom	IA-2	1.9	11.3	SS-35	35.8	19.3
Main Coating	IA-3	2.5	504	SS-26	12.1	46.3
Main Coating	IA-4	71.2	746	SS-15	4,730	517

Shipping	IA-15	27.6	446	SS-36	100	8.5

Outdoor Ambient Air Results

Various VOCs were detected above laboratory method reporting limits in the ambient outdoor air samples AA-1 and AA-2 collected September 16-17, 2019, AA-9 collected October 3-4, 2019, AA-9, AA-10 and AA-11 collected October 9-10, 2019. None of the detected concentrations exceeded their respective MPCA Residential ISVs with the exception of PCE which was detected slightly above the Residential ISV of 3.4 ug/m^3 in AA-2 at a concentration of 3.5 ug/m^3 during the September 16-17, 2019 sampling event.

TCE was detected above laboratory reporting limits in one ambient air sample collected during the July 2019 RI; however, TCE was not detected above laboratory reporting limits in any of the ambient air samples collected during this SRI.

Crawl space and outdoor/ambient air sample results are summarized in Table 7. Laboratory reports and supporting chain-of-custody documentation are included in Appendix C.

6.4 SEDIMENT SAMPLES

6.4.1 Sediment Description

A total of 14 sediment samples were collected at the Site. The sediment sample SED-9 was collected from the south discharge point of the southwest stormwater pond at the Site. Samples SED-10 and SED-11 were collected between the east stormwater pond discharge and Lambert Creek. The sediment samples SED-12, SED-13, SED-14, SED-15, SED-16, SED-17 and SED-18 were collected along the north bank of Lambert Creek on the eastern portion of the Site. Sample SED-22 was collected from the northeast corner of the Site from the south discharge of Whitaker Pond. Sediment sample SED-21 was collected from the southern inlet and samples SED-19 and SED-20 were collected from the southeast inlet.

Sediments encountered along the north bank of Lambert Creek generally consisted of saturated, dark brown to black organic rich clays containing organics (roots, pieces of wood and decomposing plant parts) with organics odors.

6.4.2 Sediment Analytical Results

Sediment sample analytical results were compared to Sediment Quality Target (SQTs) criteria established by the MPCA and its collaborators as sediment assessment tools. MPCA guidance for the development of the SQTs is used to characterize the toxicity of the sediment to sediment-dwelling organisms based on the data collected at the site. For VOCs, which do not currently have Level II SQTs, the MPCA Residential SRVs are used as a surrogate SQT for the purposes of this evaluation.

Level I SQTs are intended to identify contaminant concentrations below which harmful effects on sediment-dwelling organisms (i.e., benthic invertebrates) are unlikely to be observed. Chemical concentrations at SQT Level 1 concentrations or lower are unlikely to have an adverse effect on benthic invertebrates.

Level II SQTs are intended to identify contaminant concentrations above which some harmful effects on sediment-dwelling organisms are likely to be observed.

Lead

Low levels of lead were detected in all 14 of the sediment samples collected at the Site. Lead was identified at concentrations exceeding the MPCA Level I SQT of 36 mg/kg in

SED-9 at 103 mg/kg, SED-13 at 98.4 mg/kg, SED-14 at 91.7 mg/kg, SED-15 at 51.7 mg/kg and SED-16 at 77.3 mg/kg. In the sediment samples collected from between the eastern stormwater pond and Lambert Creek concentrations of lead were identified above the MPCA Level II SQT of 130 mg/kg at 374 mg/kg in SED-10, at 546 mg/kg in SED-11, and at 137 mg/kg in SED-12.

Sediment sample results are summarized on Table 8 and depicted on Figure 21. Complete laboratory reports and supporting chain-of-custody documentation are included in Appendix C.

6.5 SURFACE WATER

Surface water sample analytical results were compared to the MPCA Tier I Surface Water Screening Criteria for non-Outstanding International Resource Waters (ORVW) and Outstanding Resource Value Waters (OIRW) waters. Lambert Creek is identified within the Mississippi River Basin – Twin Cities watershed as "Unnamed Creek (Lambert Creek); Highway 96 to Vadnais Lk: #07010206-801." The MPCA Beneficial Use Classification for Lambert Creek is classified a 2B, 3C, 4A, 4B, 5 and 6 water body.

The Surface water sample SW-7 was collected from the south discharge point of the southwest stormwater pond at the Site. Samples SW-8 and SW-9 were collected between the east stormwater pond discharge and Lambert Creek. The surface water samples SW-10, SW-11, SW-12, SW-23, SW-14, SW-15 and SW-15 were collected along the north bank of Lambert Creek on the eastern portion of the Site and the sample SW-20 was collected from the south discharge of Whitaker Pond on the northeast corner of the Site. Surface water sample SW-19 was collected from the southern inlet and samples SW-17 and SW-18 SED-

19 were collected from the southeast inlet. Additionally, two (2) roof drain downspout samples were collected during a rain event on October 21, 2019.

Lead

Lead was detected above laboratory reporting limits in all of the surface water samples collected during this SRI. The detected concentrations of 0.56 ug/L in SW-10, 0.44 ug/L in SW-11, 1.0 ug/L in SW-12, 0.58 ug/L in SW-13, 0.56 ug/L in SW-15, 0.32 ug/L in SW-16, 0.61 ug/L in SW-18, 0.12 ug/L in SW-19, and 0.3 ug/L in SW-20 did not exceed the hardness adjusted Tier I Surface Water Criteria. Lead was detected above the hardness adjusted Tier I Surface Water Criteria of 6.72 ug/L in SW-7 at 26.4 ug/L, at 88.1 ug/L in SW-8 and at 44.6 in the SW-8 duplicate sample DUP102319, 52.0 ug/L in SW-9, 640 ug/L in SW-27 and at 517 ug/L in the SW-17 duplicate sample DUP-2.

Downspout Sample Results

Lead was detected above laboratory reporting limits in both downspouts samples; however, the detected concentrations did not exceed the hardness adjusted Tier I Surface Water Criteria. Lead was detected at a concentration of 1.6 ug/L in Downspout 1 and at a concentration of 2.7 ug/L at Downspout 2.

Surface water analytical results are summarized on Table 9. Sample results are depicted on Figure 22. Complete laboratory reports and supporting chain-of-custody documentation are included in Appendix D.

6.6 MONITORING WELL

Groundwater measurements were collected on multiple occasions between November 2019 and February 2020. The groundwater measurements were taken using an electronic tape to a precision of 0.01 feet and referenced the top of the PVC riser pipe. Stream measurements were collected from the gauge situated in Lambert Creek. Water level measurements are summarized in the table below.

Date	Depth to Water (feet)	Elevation (feet above MSL)	Stream Level (feet)	Stream Elevation (feet above MSL)
November 21, 2019	0.8	912.14	9.02	912.35
December 5, 2019	2.62	912.74	9.08 (Creek Frozen)	912.41
December 11, 2019	2.61	912.75	9.16 (Creek Frozen with snow cover)	912.49
January 7, 2020	2.62	912.74	9.28 (Creek Frozen)	912.61
January 31, 2020	2.35 (frozen)	913.01	9.28 (Creek Frozen with snow cover)	912.61

With the exception of the November 21, 2019 monitoring event, Lambert Creek exhibits gaining stream characteristics. When groundwater elevations exceed the stream elevation, groundwater is discharging to the creek. It is anticipated that this condition can vary throughout the year, but based on the data collected to date, Lambert Creek appears to

exhibit a gaining characteristic. In this scenario, dissolved phase contaminants would be transported in the shallow groundwater table system would discharge to Lambert Creek.

6.7 ANALYTICAL RESULTS QUALITY ASSURANCE/QUALITY CONTROL

During the SRI field activities Wenck collected numerous QA/QC samples that were submitted to the lab for analysis. Wenck collected matrix spike (MS) and matrix spike duplicate (MSD) samples, blind duplicate samples, trip blanks and rinsate samples. Samples QA/QC samples for this project are identified in the sections below.

6.7.1 Blind Duplicate Sample Summary

6.7.5 QA/QC Summary

The data quality objectives outlined in the SRI Work Plan were followed throughout the investigation. Wenck contracted Diane Short & Associates to review the laboratory reports and QA/QC data. Upon review of the laboratory data qualifiers applicable to this investigation, with any exceptions noted on the validation forms and the text below, it is Wenck's opinion that the qualified data does not affect the outcome of the SRI activities discussed in this report. The validation forms and EDD reports associated with the July 2019 RI sampling lab data are included in Appendix D.

6.7.5.1 Validation Summary - Air

Sample Data Groups (SDGS): 10488827, 10488828, 10489390, 10489575, 10489670, 10491723, 10491768, 10491830, 10493999, 10494005, 10494257, 10494260, 10494433, 10495024, 10495155, 10497227, 10501524, 10504882, 10505017.

Data in the above-referenced SDGs are considered to be usable for project purposes. Qualifiers are added for field precision and for a possible laboratory spike bias. Data are fully usable with consideration of the potential biases. A summary of key points follows.

Chain of Custody (COC)
Not all cross-outs were initialed. This occurred on the COCs for 10491768, 10491830, 10493999, 10494005, 10495024, and 10497227. Although these are imperfections in the COCs for these projects, the reason for the change is obvious and the issues appear minor. No qualifiers are added.

There are a few instances where the time received was recorded as a few minutes different than the relinquishment time. This occurred in SDGs 10491768, 10491830, 10493999, and 10494005. This is a common discrepancy related to the time to perform the log-in procedure - no qualifiers re applied.

SDGs 10504882 and 10505017 contained samples taken during January 2020. The sampler filled out the COC incorrectly, showing January 2019 in all cases. The relinquishment date is also shown as being in January of 2019, but the date received by the laboratory is shown as January 2020. The laboratory has shown all collection dates as being in January 2020 for these samples but has not made any comment about the change from the entered dates on the COC.

In one case (DUP010920 in SDG 10504882), the laboratory failed to correct the collection date and it is shown as 1/9/2019 in the laboratory report and in the lab EDD. The actual sample date appears to have been 1/9/2020 for this sample, in accord with all the others in the set.

Although this is an obvious issue associated with human error at the start of a new year, the laboratory should provide a comment about the changes and their reason. In addition, the COC should be corrected, or an explanation provided by the sampler, for the project record. There are no qualifiers applied, but these samples could be challenged unless a correction/explanation is provided.

Normally, these types of issues are discussed in the Case Narrative. The laboratory, however, did not provide such a narrative, and there are no comments about the problem in the sample receiving documents.

Canister Pressures
For SDS: 10488827, 10488828, 10489390, 10489575, 10489670, 10491723, 10491768, 10491830, 10493999, 10494005, 10494257, 10494260, 10494433, 10495024, 10495155, 10497227, initial field and final field pressure were recorded on the COC. The laboratory pressurization was recorded on the sample receipt form. There are a few discrepancies, however, as follows:

SDG 10488828: Field readings are not recorded on the COC.
SDG 10489390: The final field reading is not recorded on the COC for sample SV-14.

SDG 10491723: The field readings are not recorded on the COC for SS-9. The final field reading is not recorded on the COC for SS-2.

No qualifiers are added.

SDG 10501524: For sample SV-11 the initial field reading is recorded on the COC as -14 and a final field reading of -1, whereas the other samples in this SDG show an initial field reading near -30. On the sample receiving documents the sample receipt pressure reading is shown as -14 for that sample, whereas it is close to the final field reading for the other samples. This suggests that the pressure gauge for the SV-11 canister may not have been reading correctly in the field.

Laboratory Control Samples

There were elevated recoveries for some analytes on LCS runs. For these cases, no qualifiers are added for non-detects, but detected analytes are qualified as JL#, where # is the applicable recovery. Qualifiers added are shown in the table within this report. Results could be biased slightly high proportional to the recovery.

Internal Standards

The laboratory did not provide a summary tabulation of the internal standard areas and retention times. The raw data includes a summary for each sample, but these have to be found manually and reviewed. This requires a raw data review for each sample, so review was performed on a 10% basis. All internal standards reviewed met TO-15 criteria.

Field Duplicates

The QAPP defines a 50% RPD or 4 x RL difference for low level results requirement for field duplicates. There are several outliers in the SDGs validated that required qualifiers. If either duplicate or sample is 5x RL or higher, the RPD is used for the qualifier if it exceeds 50%. If the result is < 5x RL, then if the absolute difference is >4 x RL, the result is qualified as JFD*#, where # is the difference. In cases where there is a non-detect in one sample but a detection in the other, the RL is used as the value in the non-detected sample for the purposes of calculating differences. As the RPD or difference increases, the precision decreases.

Field Blanks

In SDG 10505017 there is one trip blank, consisting of a canister sent to the field and returned without any sample being collected. The trip blank is free of contamination.

In SDG 10505017 (sample ID 10505017007) there is also an equipment blank. The equipment blank did contain detections of several target compounds. Because the validator does not know which samples are associated with this equipment blank, no qualifiers have been applied. However, users of the data should consider these results, all of which are greater than the Reporting Limit.

Client ID	Lab ID	Analyte	result ug/m3	PRL
Equipment Blank	10505017007	Acetone	27.4	4.3
Equipment Blank	10505017007	Benzene	0.73	0.58
Equipment Blank	10505017007	Cyclohexane	7	3.2
Equipment Blank	10505017007	Ethanol	23.5	3.5
Equipment Blank	10505017007	n-Hexane	3.0	1.3

Client ID	Lab ID	Analyte	result ug/m3	PRL
Equipment Blank	10505017007	Methylene Chloride	26.3	6.4
Equipment Blank	10505017007	Propylene	2	0.63
Equipment Blank	10505017007	Tetrachloroethene	3.8	1.2
Equipment Blank	10505017007	Toluene	2.5	1.4

Tentatively Identified Compounds (TICs)

TICs were reported for the air samples in SDGs: 10488827, 10488828, 10489390, 10489575, 10489670, 10491723, 10491768, 10491830, 10493999, 10494005, 10494257, 10494260, 10494433, 10495024, 10495155, 10497227. A 10% review of the mass spectral matches was conducted. As is typical, the certainty of identification of the TICs is variable because even with a good match to the published library spectra, the retention times are not compared to standards. Most of the mass spectral matches are good, and in cases where they are poor, the TIC is reported as "unknown."

In this case, most of the TICs identified are hydrocarbons of various types. Although the library match is to a specific isomer, many hydrocarbon isomers give very similar mass spectra. Therefore, the general nature of the hydrocarbon (alkane, unsaturated alkane or cycloalkane, bicyclic hydrocarbon, etc.) is likely to be correct, but the specific isomer reported could be incorrect. These results should be used with these caveats in mind. Data are qualified 'JN' to indicate estimated result and identification.

TICS were not reported in SDGs: 10501524, 10504882, 10505017.

Validation qualifiers have been added to the appropriate air data tables.

6.7.5.2 Validation Summary - Inorganics (Water and Soil)

SDGs: 10489386, 10489552, 10489715, 10494294, 10494421, 10496328, 10496688, 10496689, 10496869, 105001264, 105001393, 105001783, 105001787, 105001793, 105001795, 105002228, 105002608, 105001950, 105002086, 105002407.

The data were validated with a minimum of 10% validated as EPA raw data review. All SDGs are Level IV. The laboratory has complied with the requested method. Data are fully usable with consideration of the qualifiers that have been applied.

Chain of Custody and Sample Preservation

For SDGs: 10489386, 10489552, 10489715, 10494294, 10494421, 10496328, 10496688, 10496689, 10496869, cooler temperatures were within acceptance limits. For soil samples there is no additional preservation required for lead. For water samples, in most cases the sample receipt checklists indicate that samples were either within pH limits or were brought to those limits at the lab. There is no information regarding the pH of water samples received for lead in SDGs 10494294, 10494421, and 10496328. For SDG 10496328 the COC lists the samples as unpreserved, and for 10494294 and 10494421 there is no indication of metals preservation being used for any of the samples. The validator could not find any data on preservation of the samples used for lead anywhere in the data packages. There appears to have been some non-standard work done on these samples but since there is no Case Narrative or any other notes about this, there is no information available to allow evaluation of these lead results. The project manager is apprised of possible authentication data that are required to complete the project record.

In the case of SDG 15001393 there is a 6-minute difference between the relinquishment and lab received time. Such small differences reflect the difference in time required to physically turn over the samples at the lab and the difference is not significant. However, a note should be placed in the project record confirming that this is the reason for the difference.

Field Blanks

For the SDGs related to this section, lead was not detected in the project field blanks for the methods used in reporting. No qualifiers are applied.

Detection Limits

For SDGs: 10489386, 10489552, 10489715, 10494294, 10494421, 10496328, 10496688, 10496689, 10496869, the laboratory used both method 6010D (ICP) and ICPMS (6020B). The reporting limit for ICPMS is lower than for ICP. In addition, the laboratory has run field blanks by both methods but only reported one in the EDDs. In some cases, analytes are not detected in field blanks by ICP but are by ICPMS. However, the results are low enough in such cases that they do not impact the sample results.

Two SDGs submitted 6010 and 6020 results for the same samples. A review of the data indicates detected results for the soil data show acceptable precision of 35% RPD or less. The water data for the 6010 data compared to 6020 results indicates that all reported non-detected 6010 results had a valid result reported using 6020.

Matrix Spikes and Matrix Duplicates

All MS/MSD recoveries were within criteria or were associated with samples having results > 4x the spike levels but for one elevated recovery in sample SB-7 (0-1) [10494421] which required qualification as shown in the body of this report. With the exception of the samples discussed below, all MS/MSD RPD values were acceptable.

There were outliers that required qualification related to sample GP-31 (0-1) (SDG 10502407). Results for recovery outliers are qualified as JMS#, where # is the recovery observed. Data could be biased low or high in proportion to the spike recovery. One sample had a MS/MSD RPD of 63% which is outside of limits.

Serial Dilution

For SDGs: 10489386, 10489552, 10489715, 10494294, 10494421, 10496328, 10496688, 10496689, 10496869, all serial dilutions provided for samples in these SDGs were within control, with exceptions. Outliers are qualified only where the result is > 50x the IDL, and although the serial dilution for SW-9 was out of limits the sample result is < 50x IDL. Only one result is qualified. Data are qualified JE#, where # is the %D. The bias is usually high, but the QC sample indicates non-linear matrix or chemical effects and the bias is not determined.

For SDG 105001264, sample SB-8 (0-1) and sample GP-24 (5-7.5) were used for serial dilutions. Data are qualified JE# where # is the %D. No bias can be determined as this qualifier indicates non-linear chemical or matrix effects. The bias is noted, however, as often being high.

Field Duplicates

For SDGs: 10489386, 10489552, 10489715, 10494294, 10494421, 10496328, 10496688, 10496689, 10496869, there were outliers requiring qualification. If the RPD is >50%, the qualifier added is JFD#, where # is the RPD observed. In cases where one analyte is ND but

the other is >5x RL, the RPD has been used rather than the absolute difference. The value for the non-detected analyte has been chosen as the RL because results appear only to be reported to the RL. These outliers probably reflect sample non-homogeneity, which is a fairly common problem for lead.

The field duplicate (DUP 120619-A duplicate of GP-28 0-1, SDG 10501793) is out of limits with an RPD of 69%. Lead is qualified as JFD69 in both the sample and the field duplicate. The qualifier added is JFD#, where # is the RPD observed.

Note that field duplicate samples do not include times in order to maintain their "blind" status to the laboratory. Dates and times should be recorded in the project field notebooks.

Validation qualifiers have been added to the appropriate inorganic data tables.

6.7.5.3 Validation Summary - Organics (Water and Soil)

Sample Data Groups (SDGS): 10489386, 10489552, 10489715, 10494294, 10494421, 105001264, 105001393, 105001783, 105001787, 105001793, 105001795, 105002228, 105002608, 105001950, 105002086, 105002407.

The data were validated with a minimum of 10% validated as EPA raw data review. All SDGs are Level IV. The laboratory has complied with the requested method. The laboratory has complied with the requested method. Data are fully usable, and no qualifiers are added.

Chain of Custody
For SDG 10494421: The laboratory reported that there was an extra container of sample SB-7 (8-10), not listed on the COC. There is no discussion about how this was handled. Samples were sent to the Pace Minneapolis laboratory. In one case (10501264), they were subsequently sent to the Pace Mt. Joliet laboratory for 8260 analysis and have COC documentation for both shipments.

In SDG 10502228, there is a note on the COC that the aqueous trip blanks froze and broke, so no trip blanks are available for this SDG.

For numerous SDGs reviewed several reports several instances were noted in which cross-outs were not initialed.

Note that field duplicate samples do not include times in order to maintain their "blind" status to the laboratory. Dates and times should be recorded in the project field notebooks.

Temperature:
EPA regulations (See Federal Register, March 12, 2007, 40CFR Part 122) require only that the temperature of samples delivered to the laboratory be less than 6° C and all samples intact. For SDG 10489386, the cooler temperature is reported as 17.2° C. However, in this case the samples were received on the same day of sampling in less than 2 hours of the sample time. In this case the samples had not had time to cool prior to delivery to the lab and no qualifiers are required.

pH:
For Method(s) 8260B: All soil samples were properly preserved with methanol and analyzed within 14 days of the collection date. Water samples were properly preserved to pH < 2 and the applicable preservative was used. Preserved water samples must be analyzed within 14

days of the collections date. Improperly preserved water samples must be analyzed within 7 days of the collection dates.

For SDGs: 105001795, 105002228, 105002608, 105001950, 105002086, 105002407 several laboratory logs show that some samples were at a pH above 2. This includes the following samples:

Sample	Lab Sample ID	pH	Hold Time
SB-16 (10-13)	10501950003	4	7.8
SB-16 (25-27)	10501950005	7	7.9
GP-27 (17-19)	10501950009	4	8.8
GP-27 (38-40)	10501950014	4	8

In addition, pH logs could not be located for SDG 10502407 and 10502608. Because the analytes reviewed are all chlorinated compounds, there is no impact of the elevated pH for these samples. 40CFR allows 14-day holding times for unpreserved chlorinated compounds. Other target compounds could be impacted if they become of interest. No qualifiers are applied.

Continuing Calibration

There are two high responses for chloroethane, one on 10/10/2019 associated with SDG 10494294 and one on 10/12/2019 associated with SDG 10494421. Samples impacted by these CCVs show no detection for chloroethane and no qualifiers are required.

Internal Standards

For SDGs: 10489386, 10489552, 10489715, 10494294, 10494421, IS Area % recovery summaries were provided and were within criteria for all 8260B analyses. For 8270D-SIM the recovery of the 1,4-Dioxane-d8 internal standard is low in the analytical run used for samples SB-1 and SB-3 in SDG 10494294. Results for these samples are qualified as JI#, where # is the observed recovery.

For SDGs: 105001264, 105001393, 105001783, 105001787, 105001793, IS Area % recovery summaries were provided and were within criteria for all 8260B analyses. For 8270D-SIM the recovery of the 1,4-Dioxane-d8 internal standard is low in the analytical run used for a number of samples in SDGs: 10501264, 10501393, 10501783 and 10501793. Results for these samples are qualified as JI#, where # is the observed recovery. These same samples were also qualified for surrogate recoveries and so the listed qualifier includes JS#.

For SDGs: 105001795, 105002228, 105002608, 105001950, 105002086, 105002407, IS Area % recovery summaries were provided and were within criteria for all 8260B analyses. For 8270D-SIM the recovery of the 1,4-Dioxane-d8 internal standard is low in the analytical run used for a number of samples. Results for these samples are qualified as JI#, where # is the observed recovery. These same samples were also qualified for surrogate recoveries and so the listed qualifier includes JS#. In SDG 10501950, there are two runs of sample GP-27 8-12′. In one of these runs, the internal standard recovery is less than 10%. In addition, the associated LCS is recovered less than 10%. The result is rejected as shown in the table within the body of this result. The second run, although qualified for low internal standard recovery, is usable and the preferred result of the two.

In the case of 8270D-SIM, the analysis uses 1,4-dioxane-d8 for the internal standard associated with 1,4-dioxane, making this an isotopic dilution analysis. Because the internal standard and target are nearly chemically identical, the accuracy of the analysis does not strongly depend on the recovery of the internal standard. Essentially the analysis is designed to self-correct for internal standard recovery to a much greater degree than a normal 8270D non-isotopic dilution analysis. See the discussion of this point under the Surrogate Standards section of this report.

For this reason, although the 1,4-dioxane results impacted by internal standard outliers are qualified, the effect on accuracy for this analyte should be regarded as minor, and the data should be fully usable. The results do show that the 1,4-dioxane and its internal standard are extracted less efficiently from those samples that have been qualified than for unqualified data.

Method Blanks

There are no analytes reported in any of the 8260B method blanks. 1,4-Dioxane was detected in one 8270D method blank (10501793013). The associated sample is qualified as UB#, where # is the level observed in the method blank. Data are fully usable as non-detected values.

For SDGs: 105001795, 105002228, 105002608, 105001950, 105002086, 105002407, There are no analytes reported in any of the method blanks for 8260B. 1,4-Dioxane was detected in one 8270D method blank. The associated samples are all non-detects for 1,4-dioxane, and no qualifiers are required.

Surrogates

For SDGs: 10489386, 10489552, 10489715, 10494294, 10494421, all surrogate recoveries met criteria for Method 8260B. For Method 8270D-SIM, surrogates were out of limits low in two samples, requiring qualification as JS#, where # is the observed recovery. The data could be biased low proportional to the %R. The recoveries of 1,4-dioxane in 8270D-SIM LCS runs are consistent with this. Recoveries of 1,4-dioxane in the project LCS runs are all between 84% and 114%. At the same time, the "surrogate" recovery for the same runs is much lower, between 33% and 43%.

For SDGs: 105001264, 105001393, 105001783, 105001787, 105001793, all surrogate recoveries met criteria for Method 8260B. For Method 8270D-SIM, surrogates are within the 30-130% window.

For SDGs: 105001795, 105002228, 105002608, 105001950, 105002086, 105002407, all surrogate recoveries met criteria for Method 8260B. For Method 8270D-SIM, surrogates are within the 30-130% window.

Matrix Spikes and MS Duplicates

For SDGs: 105001795, 105002228, 105002608, 105001950, 105002086, 105002407, there are a number of outliers present in the 8160B data. However, in all cases recoveries are high, and associated samples are non-detects. Data would be qualified JMS#, where # is the value of the %R. In this case there are no qualifiers required.

Laboratory Control Samples

For SDGs: 10489386, 10489552, 10489715, 10494294, 10494421, several percent recoveries were outside the project QC limits of 60-130% for chloroethane and one for vinyl

chloride, requiring qualification of associated samples as JL#, where # is the outlier recovery. The data could be biased low proportional to the %R.

For SDGs: 105001264, 105001393, 105001783, 105001787, 105001793, two recoveries were outside the project QC limits of 60-130% for chloroethane and five for vinyl chloride, requiring qualification of associated samples as JL#, where # is the outlier recovery. Data are fully usable as non-detected values. Data could be biased low in proportion to the recovery.

For SDGs: 105001795, 105002228, 105002608, 105001950, 105002086, 105002407, 8260B: Chloroethane was recovered above 130% in 5 cases, and 1,1-Dichloroethene was recovered above 130% in one case. In all these instances, associated samples are non-detects for these targets, and no qualifiers are required for the possible high bias. 8270D-SIM: The recovery of 1,4-dioxane was below 10% in one LCS analyzed in SDG 10501950. The associated sample result is qualified as R, unusable. A second run is available for this sample with an acceptable LCS.

Equipment Rinse Blank, Trip Blanks or other Field Blanks

For SDGs: 10489386, 10489552, 10489715, 10494294, 10494421, contamination due to TCE was reported in one trip blank associated with SDG 10494421. One associated sample (SB-7) had a detection of TCE which was less than 5x the trip blank level. The result is qualified as UTB#. Data are fully usable as non-detected values.

For SDGs: 105001264, 105001393, 105001783, 105001787, 105001793, trip and field blanks are free of contamination and no qualifiers are required.

For SDGs: 105001795, 105002228, 105002608, 105001950, 105002086, 105002407, trip and field blanks are free of contamination and no qualifiers are required.

Field Duplicates

Field duplicate sets as listed in the table above are all within precision limits.

Compound Identification

For all SDGs where there were detected targets, the match with the library spectra were acceptable and retention times were within limits.

Validation qualifiers have been added to the appropriate organic data tables.

7.0 Discussion

7.1 GENERAL

Wenck's professional opinions on the locations of known contamination and affected media are based on the field observations and laboratory analytical results during the investigation. The results for each of the sampled environmental media are presented on the attached tables and discussed in the sections below. SRI sample locations are shown on Figures 3 through 8.

7.2 SOIL CONDITIONS

A total of 32 soil samples, 14 exterior samples and 18 interior samples, were collected and analyzed for total lead. Concentrations of lead exceeded the Industrial SRV of 700 mg/kg at SB-5 (0-1') at 1,860 mg/kg and in SB-11 (0-1) at a concentration of 1,060 mg/kg. Lead was detected above the Tier 1 SLV of 2,700 mg/kg in DUP100419-B (blind duplicate of SB-5 (0-1)) at a concentration of 5,800 mg/kg, and in SB-6 (0-1) at a concentration of 13,600 mg/kg. All of these lead exceedances of the Industrial SRV are located beneath the concrete floor of the North Manufacturing Building.

VOCs were not detected above their respective laboratory reporting limits in any of the soil samples collected at the Site with the exception of GP-26 and SB-6. In the exterior sample collected at GP-26 (2-4') p-Isopropyltoluene was detected above laboratory reporting limits at a concentration of 23.6 mg/kg, ethylbenzene was detected above laboratory reporting limits at a concentration of 0.30 mg/kg and toluene was detected at a concentration of 5.8 mg/kg above the SLV of 2.5 mg/kg for toluene. TCE was detected at a concentration of 0.12 mg/kg in the interior bring SB-6 (0-1) above the SLV of 0.0023 mg/kg and trans-1,2-dichloroethene was detected above laboratory reporting limits at a concentration of 0.11 mg/kg.

7.3 GROUNDWATER CONDITIONS

A total of 115 groundwater samples collected from the soil borings were analyzed for VOCs. VOC compounds including 1,1-DCA, 1,1-DCE, 1,2-DCA, chloroethane, acetone, ethylbenzene, toluene, TCE, p-isopropyltoluene, *cis*-1,2-DCE, *trans*-1,2-DCE and VC were detected above their laboratory reporting limits during this investigation. Based on the findings of this SRI, the results appear consistent with the first phase of investigation conducted in 2019 and with historical investigations conducted prior to 2019. At the low-level concentrations detected, 1,1-DCA, chloroethane, *cis*-1,2-DCE, *trans*-1,2-DCE and VC are commonly associated with natural attenuation of TCE. 1,1-DCA, toluene, TCE, *trans*-1,2-DCE and VC were the only compounds identified at concentrations exceeding their respective regulatory risk-screening criteria (HRLs and/or HBVs).

A total of 98 groundwater samples collected from the soil borings were analyzed for 1,4-dioxane. 1,4-dioxane was identified in 27 groundwater samples collected during the SRI above the HRL.

Dissolved lead samples were collected from beneath the main coating room during the SRI. Dissolved lead concentrations ranged from a low concentration of 0.21 mg/l to high of 3.5 mg/l.

VOCs in groundwater were detected near and down-gradient (south and southeast) of the suspected historic source areas located beneath the building. The installation of permanent groundwater monitoring wells is recommended to monitor volatile, semi-volatile (1,4-dioxane) and natural attenuation parameters in the shallow groundwater table aquifer.

Additionally, an assessment of the deeper confined potable aquifer should be evaluated for potential impacts from past releases.

7.4 EXTERIOR SOIL VAPOR CONDITIONS

Two rounds of exterior soil vapor samples were collected from 23 locations throughout the Site to assess heating and non-heating season vapor conditions. The first round of sampling was conducted between August and October 2019 and the second round between December 2019 and January 2020.

Non-Heating Season Sample Results

Various VOCs were detected above laboratory reporting limits in the exterior soil vapor samples SV-1 through SV-23; however, none of the detected concentrations exceeded their respective 33X Residential/Industrial ISVs with the exception of two sample locations. TCE and VC were detected above 33x the Industrial ISV in the vapor sample SV-19 and sample SV-20, respectively. Samples SV-19 and SV-20 were collected on the southeast corner and immediately adjacent to the North Campus building.

Heating Season Sample Results

The second round of vapor sampling was completed between December 2nd and 5th, 2019. PCE was detected above 33x the Residential ISV at multiple locations during this sampling event. PCE was detected above 33x the Residential ISV of 110 ug/m3 in SV-1, SV-2, SV-3, SV-8, SV-9, SV-10, SV-11, SV-12, SV-15, SV-17, SV-18, SV-19, and SV-23. Naphthalene and ethylbenzene were also detected at concentrations in excess of their 33x the Residential ISVs.

The detections of PCE during the December 2019 sampling event do not represent detections of site contaminants based on the lack of PCE concentrations during the source areas at the Site and the lack of PCE in groundwater and previous vapor sampling events. PCE concentrations reported by the lab do not follow a traditional concentration gradient. Wenck resample these locations in January and confirmed PCE is not present at these locations. Due to the fact that PCE was not detected at concentrations exceeding 33x the Residential ISV at any vapor sample location during the first round of soil vapor sampling, has not been identified as a primary contaminant of concern at the Site based on the lack of previous significant detections in soil, soil vapor or groundwater it was hypothesized that the detections may have been the result of either 1) improperly decontaminated drilling equipment or a 2) a lab error. Wenck contacted both the drilling contractor and environmental lab to begin the process of trying to identify a potential reason for the unexpected PCE results. Both the driller and lab confirmed that their QC protocols were followed, and no issues were identified that could have resulted in the elevated PCE concentrations during the December 2019 soil gas sampling event.

After following up with the drilling and lab contractors, Water Gremlin discussed with the MPCA the suspect PCE concentrations and recommended an additional round of sampling to determine if the elevated PCE detections were an anomalous event or a real environmental impact to the Site. Upon approval from the MPCA an additional round of sampling was

conducted at locations SV-1, SV-2, SV-3, SV-4, SV-5, SV-7, SV-8, SV-9, SV-10, SV-11, SV-12, SV-13, SV-15, SV-22 and SV-23 between January 9th and 10th, 2020. The additional sampling conducted on January 9th and 10th did not reveal PCE at concentrations exceeding the 33x Residential/Industrial ISV in any of the soil vapor sampled collected. Therefore, based on the lack of PCE detections identified at the resampled locations, the previous PCE detections from the December 2nd and 5th, 2019 sampling event do not appear to be indicative of a release at the Site.

7.5 SUB-SLAB VAPOR CONDITIONS

The results of the July 2019 RI found TCE and trans-1,2-DCE soil vapor concentrations above the EISVs beneath the north manufacturing building. Based on the results of the July 2019 RI, a temporary SSDS was constructed to mitigate potential vapor intrusion into the North Campus facility building. Installation of the temporary SSDS system began on August 23, 2019 and was completed and operational the week of September 9, 2019. The temporary SSDS has been in continuous operation since the initial start-up and creates a negative pressure field below the building slab preventing vapors from entering the indoor air space. A permanent system is currently being constructed and is anticipated to be installed in March 2020. Interim Vapor Mitigation activities will be discussed in further detail in a separate Vapor Response Action Implementation Report after the permanent system has been installed and is operational.

Additional vapor sampling was completed as part of this SRI to further investigate previously un-delineated areas within the North Campus building. Thirteen additional permanent sub-slab vapor pins were advanced within the Northwest Die Cast, Main Die Cast, Lunchroom, Coining, Locker Rooms, East Die Cast, Shipping and Receiving and Gravity Cast areas of the North Campus building. Multiple sub-slab samples were collected pre and post mitigation from various locations throughout the course of this investigation.

While paired sampling data is present in this SRI, the evaluation of this data will be provided as part of the Vapor Mitigation Response Action Implementation Report at a later date.

7.6 SEDIMENT CONDITIONS

A total of 14 sediment samples were collected at the Site during the SRI. Total lead concentrations were identified above the MPCA Level 1 SQT in 10 of the 14 sediment samples collected from the Site. Three sediment samples identified lead concentrations above the MPCA Level II SQT. Level I SQTs are intended to identify contaminant concentrations below which harmful effects on sediment-dwelling organisms (i.e., benthic invertebrates) are unlikely to be observed. Chemical concentrations at SQT Level 1 concentrations or lower are unlikely to have an adverse effect on benthic invertebrates. Level II SQTs are intended to identify contaminant concentrations above which some harmful effects on sediment-dwelling organisms are likely to be observed.

Based on the data collected to date it appears that anthropogenic deposition of lead has occurred in the wetland area south and east of the facility and within Lambert Creek. The highest concentrations of lead were observed at the inlet to and south of, the east stormwater pond between the pond outfall and Lambert Creek. Lead levels along Lambert Creek ranged from a low of 3.1 mg/kg to a high 137 mg/kg. The average of the 13 samples collected within Lambert creek is 67.0 mg/kg with a standard deviation of 38.8 mg/kg. Four background samples (SED-9, SED-19, SED-20 and SED-21) were collected as part of the

SRI activities. The background samples ranged from a low concentration of 9.9 mg/kg to a high of 103 mg/kg with an average of 42.8 mg/kg and a standard deviation of 33.1 mg/kg.

Based on the data set generated to date it appears anthropogenic lead deposition has likely occurred on the property. This phenomenon may have been a result of past and present lead production and/or aerial deposition of lead during the period when leaded gasoline automobiles traversed the area.

7.6 SURFACE WATER CONDITIONS

County Ditch 14 is identified in the 2018 Inventory of Impaired Waters published by the MPCA as "Unnamed Creek (Lambert Creek) with the Assessment United Identifier (AUID) #07010206-801. The creek is listed as impaired for aquatic recreation due to fecal coliform and has been listed on the impaired water inventory since 2008. Lead was detected above the Tier 1 Surface Water Screening Criteria of 6.72 ug/l in six of 18 samples collected from Lambert Creek. Total lead concentrations ranged non-detect to a high of 640 ug/l. The highest total lead concentration was observed upgradient of the facility along the east edge of the property at sample location SW-17 within a tributary of Lambert Creek.

Wenck does not recommend additional sampling at this time. Wenck does however recommend the east stormwater pond be cleaned out in an effort to reduce any additional loading of lead-impacted sediments into the adjacent wetland and ultimately Lambert Creek.

Stormwater roof downspout samples were collected during an October 21, 2019 rain event to evaluate the roof as a potential source for lead impacts to the stormwater pond and possibly the adjacent wetland. The downspout samples revealed total lead concentrations of 1.6 and 2.7 ug/l. Based on the very low levels of lead in these samples it does not appear at this time that the roof is a significant source of lead to the pond or adjacent wetland.

7.7 EXPOSURE PATHWAY ANALYSIS AND RISK ASSESSMENT

The CSM for fate and transport formulated and discussed in the July 2019 RI provided the basis for identifying and evaluating the contamination mechanism, source media, transport mechanisms, and potential exposure media. The contaminated media identified to date includes soil vapor, soil, sediment, surface water and groundwater These impacted media act as potential sources of contamination for transport to various receptors. Contaminants in soil vapor may migrate into the breathing air space within the on-Site building, in soil to air via fugitive dust, to sediment via erosion, surface water through migration in groundwater, and to groundwater via leaching. The exposure pathways to a human receptor from the potential source media are discussed below:

- Vapor intrusion pathway: Indoor air exposure of VOCs through vapor intrusion could occur if soil vapors migrate upward through the vadose zone into the interior spaces of the building, contaminating indoor air. Vapor may travel through the vadose zone and into the structure through the soils or through preferential pathways such as utility corridors that lead to a structure, utility connections at the structure, through the drain tile system and sump, through cracks or gaps in the building foundation, etc. Known vapor risk is currently being mitigated through sub-slab vapor depressurization. System monitoring is conducted on a regular basis to determine if the system is providing the required negative pressure differential beneath the building to ensure adequate protection for the occupants of the building. Deeper soil

vapor extraction will commence as soon as the permanent vapor mitigation system is installed. The deeper vapor extraction is designed to remove vadose zone source(s) of volatile contamination beneath the building.

- Direct contact exposure pathway: Potential exposure of lead would likely occur from soil disturbance during any future excavation activities (e.g., building construction, utility installation, etc.) that could occur at the Site. Lead exposure may also occur during pond maintenance activities or potential creek dredging or rerouting activities.
- Drinking water exposure pathway: Potential impacted groundwater exposure would occur from the leaching of contaminated soil into the groundwater system, the migration of the contaminated groundwater to a potable water well, and the consumption or dermal contact of the withdrawn contaminated water. Groundwater quality data collected during the July 2019 RI and SRI was consistent with past investigation findings. This exposure pathway appears unlikely due to the presence of a laterally extensive semi-confining layer that exists at the Site and the fact that nearby potable water supply wells are not drawing water from the shallow glacial aquifer. However, determining the vertical and horizontal extent of VOC contamination at the Site is necessary to fully understand the vapor intrusion risk pathway (discussed above) and to develop a mitigation technology adequate to protect the occupants in the North Campus building. The deeper potable water supply aquifer will be assessed in the next phase of investigation.
- Groundwater to surface water risk pathway: During the SRI one groundwater monitoring well was installed adjacent to Lambert Creek. In addition, a stream staff gauge was installed in Lambert Creek to allow the measurement of the creek level. Based on current data it is not conclusive that shallow groundwater at the Site discharges to the ditch located south of the North Campus building. Additional assessment of the groundwater and surface water interaction is warranted during future RI activities.

8.0 Conclusions

Based on the field observations and laboratory analysis of soil, groundwater, surface water, sediment, soil vapor and indoor air samples collected and analyzed from the Site, Wenck submits the following conclusions:

1. During the SRI of the Site, lead was identified in the shallow Site soils at concentrations in excess of Tier 2 Industrial SRV at several locations around the Site. However, exposure is unlikely during normal operations. In the event of invasive excavation activities (i.e., utility work, additional of a structural component to a building, etc.) Water gremlin would operate under a project-specific safety plan and in consultation with a third-party environmental consultant to ensure adequate protection of worker and to properly document activities. An institutional control should also be recorded to the Site.

2. During the SRI of the Site, lead was identified in sediment samples at concentrations in excess of the Tier 1 SQT and Tier 2 SQT within Lambert Creek. The highest concentrations of lead in sediment were identified within and downgradient of the east stormwater pond. No additional evaluation is recommended at this time; however, it is recommended the east pond be dredged to remove lead-impacted sediment. Stormwater samples were collected from two roof downspouts during the SRI activities. The downspout samples did not reveal elevated concentrations of lead.

3. During the July 2019 RI of the Site, lead was identified at concentrations in excess of Tier 1 Surface Water Screening Criteria in Lambert Creek. Based on the area wide lead assessment and surface water sampling, point source or fugitive impact to the creek or surface water does not appear to be occurring. No further evaluation of lead is recommended.

4. Initial assessment of the interaction between the shallow unconsolidated groundwater aquifer and the downgradient Lambert Creek has revealed that Lambert Creek exhibits a gaining characteristic. In this scenario, dissolved phase contaminants would be transported in the shallow groundwater table system would discharge to Lambert Creek. Additional evaluation will be conducted during the non-frozen months to determine if there is any seasonal variability.

5. A full-scale vapor mitigation system has been operational at the facility since September 2019. Additional refinements are actively being completed and a final blower system is being constructed for installation. Vapor mitigation detail will be provided to the MPCA for review under separate cover.

6. Groundwater impacts by VOCs were observed generally consistent with the July 2019 RI and historical investigations conducted by others. The VOCs 1,1-DCA, 1,2-DCE, toluene, trans-1,2-DCE TCE and VC are present at concentrations exceeding their respective HRLs in shallow groundwater at the Site, are similar, and in some cases lower than the concentrations reported in the investigation concluded in the 2004. The distribution of the VOC impacts indicates a southerly to southwesterly flow direction with the discharge point being Lambert Creek. That said, the July 2019 RI did not identify VOCs in any of the surface water samples. The installation of permanent groundwater monitoring wells is recommended to monitor volatile and

natural attenuation parameters in the shallow groundwater table aquifer. Additionally, an assessment of the deeper confined potable aquifer should be evaluated for potential impacts from past releases.

7. The semi-volatile compound 1,4-Dioxane was identified in the shallow groundwater in excess of the HRL of 1.0 ug/l. Additional investigation in the shallow unconfined and deeper confined aquifer is warranted. Wenck recommends the installation of a network of permanent groundwater monitoring wells in the shallow and deeper aquifers.

9.0 Standard of Care

Notes:
NE = Not Established
NS = Not Sampled
-- = Not Sampled
< = Less than the laboratory reporting limit
Bold = analyte detected above the laboratory reporting limit but less than regulatory limit
Industrial SRV exceedance
SLV exceedance
mg/kg = milligrams per kilogram (parts per million)
MPCA = Minnesota Pollution Control Agency
SRV = Soil Reference Value
SLV = Soil Leaching Value

Qualifiers (US EPA Qualifier Code):
UJ = Samples marked with this flag were non-detect but contained a representative quality control sample with a relative percent difference (RPD)outside the quality control range, or percent recovery of the analyte was below the QC limits; The associated parent sample is therefore flagged as estimated even though the results were below the laboratory reporting limits.
J = Analyte was positively identified in the sample, but the concentration is an estimated (approximate) value; Samples marked with this flag were designated as estimated based on an associated MS/MSD QC sample that contained lead recovery outside of the QC limits; As a result, the parent sample is considered estimated.
This flag was also added to samples where the serial dilution exceeded a percentage with the result greater than 50x the MDL; This value is considered to be estimated also.
J+ = Analyte was positively identified in the sample, but the concentration is believed to be estimated with a potential positive bias; Samples with this flag had an associated MS/MS sample where the RPD was outside the QC limits, resulting in a parent sample detection that is considered estimated with a potential positive bias.

Notes:
NE = Not Established
NS = Not Sampled
-- = Not Sampled
< = Less than the laboratory reporting limit
Bold = analyte detected above the laboratory reporting limit but less than regulatory limit
Industrial SRV exceedance
SLV exceedance
mg/kg = milligrams per kilogram (parts per million)
MPCA = Minnesota Pollution Control Agency
SRV = Soil Reference Value
SLV = Soil Leaching Value

Qualifiers (US EPA Qualifier Code):
UJ = Samples marked with this flag were non-detect but contained a representative quality control sample with a relative percent difference (RPD)outside the quality control range, or percent recovery of the analyte was below the QC limits; The associated parent sample is therefore flagged as estimated even though the results were below the laboratory reporting limits.
J = Analyte was positively identified in the sample, but the concentration is an estimated (approximate) value; Samples marked with this flag were designated as estimated based on an associated MS/MSD QC sample that contained lead recovery outside of the QC limits; As a result, the parent sample is considered estimated. This flag was also added to samples where the serial dilution exceeded a percentage with the result greater than 50x the MDL; This value is considered to be estimated also.
J+ = Analyte was positively identified in the sample, but the concentration is believed to be estimated with a potential positive bias; Samples with this flag had an associated MS/MS sample where the RPD was outside the QC limits, resulting in a parent sample detection that is considered estimated with a potential positive bias.

NE = Not Established

-- = Not Sampled

< = Less than the laboratory reporting limit

Bold = analyte detected above the laboratory reporting limit but less than regulatory limit

Industrial SRV exceedance

SLV exceedance

mg/kg = milligrams per kilogram (parts per million)

MPCA = Minnesota Pollution Control Agency

SRV = Soil Reference Value

SLV = Soil Leaching Value

Qualifiers (US EPA Qualifier Code):

UJ = Samples marked with this flag were non-detect but contained a representative quality control sample with a relative percent difference (RPD)outside the quality control range, or percent recovery of the analyte

J = Analyte was positively identified in the sample, but the concentration is an estimated (approximate) value; Samples marked with this flag were designated as estimated based on an associated MS/MSD QC sample that contained lead recovery outside of the QC limits; As a result, the parent sample is considered estimated. This flag was also added to samples where the serial dilution exceeded a percentage with the result greater than 50x the MDL; This value is considered to be estimated also.

J+ = Analyte was positively identified in the sample, but the concentration is believed to be estimated with a potential positive bias; Samples with this flag had an associated MS/MS sample where the RPD was outside the QC limits, resulting in a parent sample detection that is considered estimated with a potential positive bias.

Notes:

ND = Not detected above laboratory reporting limits

All results reported in micrograms per liter (ug/L)

Bold = analyte detected above the laboratory reporting limit but less than regulatory limit

<1.00

HRL or HBV exceedance

[a] = MDH Health Based Value (HBV)

NA = Not Applicable

ug/L - micrograms per liter (parts per billion)

MDH = Minnesota Department of Health

NE = Not Established

* EPA Treatment Technique Guidance Value

Qualifiers (US EPA Qualifier Code):

UJ- = The analyte was not detected above laboratory quantitation limit, however the quantitation limit is approximate as the preservation did not necessarily achieve the proper pH level of the samples, allowing for the possibility of sample degradation outside of 7-day hold time that represents a preservation qualifier with a potentially low bias; The method 14-day hold time was met, however preservation interference resulted in the estimated value; The resulting non-detect value is considered an estimated result based on this fact.

-/- = Samples with multiple qualifiers separated by a "/" are those where a separate QC issue resulted in the MS/MSD sample, resulting in parent sample being marked as estimated also (in addition to the original estimated flag from improper sample pH); The associated QC sample recovered analyte outside of the QC limits, thus the parent sample is considered estimated for this reason as well.

UJ-- = Same reasoning as "UJ-" flag; Non-detected value resulting from quantitation that is believed to be biased very low.

J- = Detected analyte was properly analyzed within hold time, however the preservation was unable to obtain a low enough sample pH criteria and corrective action was not possible prior to analysis; Detected value therefore represents an estimated value with a potentially low bias.

Notes:

ND = Not detected above laboratory reporting limits

All results reported in micrograms per liter (ug/L)

Bold = analyte detected above the laboratory reporting limit but less than regulatory limit

<1.00

HRL or HBV exceedance

[a] = MDH Health Based Value (HBV)

NA = Not Applicable

ug/L - micrograms per liter (parts per billion)

MDH = Minnesota Department of Health

NE = Not Established

* EPA Treatment Technique Guidance Value

Qualifiers (US EPA Qualifier Code):

UJ- = The analyte was not detected above laboratory quantitation limit, however the quantitation limit is approximate as the preservation did not necessarily achieve the proper pH level of the samples, allowing for the possibility of sample degradation outside of 7-day hold time that represents a preservation qualifier with a potentially low bias; The method 14-day hold time was met, however preservation interference resulted in the estimated value; The resulting non-detect value is considered an estimated result based on this fact.

-/- = Samples with multiple qualifiers separated by a "/" are those where a separate QC issue resulted in the MS/MSD sample, resulting in parent sample being marked as estimated also (in addition to the original estimated flag from improper sample pH); The associated QC sample recovered analyte outside of the QC limits, thus the parent sample is considered estimated for this reason as well.

UJ-- = Same reasoning as "UJ-" flag; Non-detected value resulting from quantitation that is believed to be biased very low.

J- = Detected analyte was properly analyzed within hold time, however the preservation was unable to obtain a low enough sample pH criteria and corrective action was not possible prior to analysis; Detected value therefore represents an estimated value with a potentially low bias.

Table 4
Groundwater Analytical Results Summary
Water Gremlin
4400 Otter Lake Road
White Bear Township, MN
Wenck Project No. B2606-0017

Notes:

ND = Not detected above laboratory reporting limits

All results reported in micrograms per liter (ug/L)

Bold = analyte detected above the laboratory reporting limit but less than regulatory limit

<1.00

HRL or HBV exceedance

[a] = MDH Health Based Value (HBV)

NA = Not Applicable

ug/L - micrograms per liter (parts per billion)

MDH = Minnesota Department of Health

NE = Not Established * EPA Treatment Technique Guidance Value

Qualifiers (US EPA Qualifier Code):

UJ- = The analyte was not detected above laboratory quantitation limit, however the quantitation limit is approximate as the preservation did not necessarily achieve the proper pH level of the samples, allowing for the possibility of sample degradation outside of 7-day hold time that represents a preservation qualifier with a potentially low bias; The method 14-day hold time was met, however preservation interference resulted in the estimated value; The resulting non-detect value is considered an estimated result based on this fact.

-/- = Samples with multiple qualifiers separated by a "/" are those where a separate QC issue resulted in the MS/MSD sample, resulting in parent sample being marked as estimated also (in addition to the original estimated flag from improper sample pH); The associated QC sample recovered analyte outside of the QC limits, thus the parent sample is considered estimated for this reason as well.

UJ-- = Same reasoning as "UJ-" flag; Non-detected value resulting from quantitation that is believed to be biased very low.

J- = Detected analyte was properly analyzed within hold time, however the preservation was unable to obtain a low enough sample pH criteria and corrective action was not possible prior to analysis; Detected value therefore represents an estimated value with a potentially low bias.

Lead	7439-92-1	15*	NS	NS	NS	NS	NS	NS	NS	NS	NS	NS	NS	NS	NS	NS	NS	NS	NS

Notes:

ND = Not detected above laboratory reporting limits

All results reported in micrograms per liter (ug/L)

Bold = analyte detected above the laboratory reporting limit but less than regulatory limit

<1.00

HRL or HBV exceedance

[a] = MDH Health Based Value (HBV)

NA = Not Applicable

ug/L - micrograms per liter (parts per billion)

MDH = Minnesota Department of Health

NE = Not Established

* EPA Treatment Technique Guidance Value

Qualifiers (US EPA Qualifier Code):

UJ- = The analyte was not detected above laboratory quantitation limit, however the quantitation limit is approximate as the preservation did not necessarily achieve the proper pH level of the samples, allowing for the possibility of sample degradation outside of 7-day hold time that represents a preservation qualifier with a potentially low bias; The method 14-day hold time was met, however preservation interference resulted in the estimated value; The resulting non-detect value is considered an estimated result based on this fact.

-/- = Samples with multiple qualifiers separated by a "/" are those where a separate QC issue resulted in the MS/MSD sample, resulting in parent sample being marked as estimated also (in addition to the original estimated flag from improper sample pH); The associated QC sample recovered analyte outside of the QC limits, thus the parent sample is considered estimated for this reason as well.

UJ-- = Same reasoning as "UJ-" flag; Non-detected value resulting from quantitation that is believed to be biased very low.

J- = Detected analyte was properly analyzed within hold time, however the preservation was unable to obtain a low enough sample pH criteria and corrective action was not possible prior to analysis; Detected value therefore represents an estimated value with a potentially low bias.

Table 5
Soil Vapor Analytical Results Summary
Water Gremlin
4400 Otter Lake Road
White Bear Township, MN
Wenck Project No. B2606-0017

Notes:

EPA = Environmental Protection Agency

MPCA = Minnesota Pollution Control Agency

ISV = Intrusion Screening Value

EISV = Expedited Intrusion Screening Value

VOCs = Volatile Organic Compounds

NE = Not Established

ND= Not Detected above laboratory reporting limits

ug/m3 = micrograms per meter cubed

Bold = analyte detected above the laboratory reporting limit but less than regulatory limit

Notes:

EPA = Environmental Protection Age
MPCA = Minnesota Pollution Control Agency
ISV = Intrusion Screening Value
EISV = Expedited Intrusion Screening Value
VOCs = Volatile Organic Compounds
NE = Not Established
ND= Not Detected above laboratory reporting limits
ug/m3 = micrograms per meter cubed
Bold = analyte detected above the laboratory reporting limit but less than regulatory limit
33X Industrial ISV Exceedance
33X Industrial EISV Exceedance

Qualifiers (DSA designation - No EPA Code Available):

JFD# = These samples and there associated pair observed a RPD result that was outside of the 50% QAPP limit previously specified; The # value represents the RPD number for the associated sample analyte.

* Water Gremlin is aware of the Site-specific trans-1,2-Dichloroethene ISV memorandum issued by the Minnesota Department of Health; 33X Industrial ISV = 8,300 ug/m3

Table 8
Sediment Analytical Results Summary
Water Gremlin
4400 Otter Lake Road
White Bear Township, MN
Wenck Project No. 2606-0017

Level II SQT exceedance

Qualifiers (US EPA Qualifier Code):
UJ = Samples marked with this flag were non-detect but contained a representative quality control sample with a relative percent difference (RPD)outside the quality control range, or percent recovery of the analyte was below the QC limits; The associated parent sample is therefore flagged as estimated even though the results were below the laboratory reporting limits.

Notes

All results reported in micrograms per liter (ug/L)

Bold = analyte detected above the laboratory reporting limit but less than regulatory limit

Tier I Surface Water Screening Criteria Exceedance

MDH = Minnesota Department of Health

[a] = MDH Health Based Value (HBV)

NA = Not Applicable

ND = Not detected above method detection limits

NE = Not Established

OIRW = Outstanding International Resource Waters

ORVW = Outstanding Resource Value Waters

Qualifiers (DSA designation - No EPA Code Available):

JFD# = These samples and there associated pair observed a RPD result that was outside of the 50% QAPP limit previously specified; The # value represents the RPD number for the associated sample analyte.

Notes:

ug/L is equivalent to PPB

mg/kg = PPM

Detections are shown in boldface

NS = Not Sampled

J- = Detected value represents an estimated value with a potentially low bias.

WELL NUMBER GP-1

CLIENT Water Gremlin
PROJECT NAME Remedial Investigation
PROJECT NUMBER 2606-0016
PROJECT LOCATION 4400 Otter Lake Road, White Bear Twp., MN 55110
DATE STARTED 6/14/19 **COMPLETED** 6/14/19
GROUND ELEVATION 928 ft **HOLE SIZE** 2.25
DRILLING CONTRACTOR Bergerson Caswell
GROUND WATER LEVELS:
DRILLING METHOD Geoprobe with 4' Macro-Core
AT TIME OF DRILLING 8.0 ft / Elev 920.0 ft
LOGGED BY KJJ **CHECKED BY** S Waterman, P.G.
AT END OF DRILLING 8.0 ft / Elev 920.0 ft
NOTES
AFTER DRILLING ---

DEPTH (ft)	SAMPLE TYPE NUMBER	RECOVERY %	U.S.C.S.	GRAPHIC LOG	MATERIAL DESCRIPTION		PID (ppm)	WELL DIAGRAM
0								
	GMC 1	100	OL / FILL / FILL / FILL / FILL		0.6 TOPSOIL, fine grained silty sand with organics, black, moist, loose 0.8 SAND (SP), fine grained with trace gravel, brown, moist 1.0 LEAN CLAY (CL), brown, moist, stiff 1.5 SAND (SP), poorly graded, fine grained, brown, moist 4.0 SILTY SAND (SM) with traces of gravel, black, moist, traces of brick, piece of slag debris at 3.5'	927.4 927.2 927.0 926.5 924.0	19.6, 9.6	
5	GMC 2	90	SP-SM		SAND with little Silt, poorly graded, very fine grained, light brown, moist, dense (7.5') Color change to pale brown, very moist to wet 8.0	920.0	6.4, 7.4	SP-15 Stainless Steel Discrete Sampler (7-11) VOC Analytical Sample
10	GMC 3	90	SP-SM		SAND with some Silt, poorly graded, fine grained, light brown, wet, dense		21.2, 6.9	
15	GMC 4	90			15.0	913.0	11.0, 4.1	
			SM		16.0 SILTY SAND, poorly graded, fine grained, gray-brown, wet, frequent silt lenses (0.5 to 1 cm thickness)	912.0		
	GMC 5	90	SM		SILTY SAND, poorly graded, very fine grained, gray-brown, wet, dense 18.0	910.0	2.3, 3.9	SP-15 Stainless Steel Discrete Sampler (16-18) VOC Analytical Sample
20			ML		SANDY SILT, poorly graded, very fine grained, gray-brown, wet, dense 20.0	908.0		
	GMC 6	90	ML		SANDY SILT, very fine grained, gray, wet, soft, frequent interbedded clayey lenses (1 to 2 cm thickness) 23.0	905.0	1.8, 7.4	
			SC		24.0 CLAYEY SAND with Silt, very fine grained, gray, wet, very soft/loose	904.0		SP-15 Stainless Steel Discrete Sampler (23-25) VOC Analytical Sample
25	GMC 7	79	ML		SANDY SILT with some Clay, very fine grained, gray, wet, soft, frequent interbedded clayey lenses 28.0	900.0	4.3, 11.8	
	GMC 8	100	CH		29.5 FAT CLAY with some Sand, fine to medium grained sand, gray, very moist, very soft	898.5	6.6, 59.2	
30			CH		FAT CLAY, little very fine grained Sand, dark gray, moist to very moist, very soft (31.5-32) Increasing sand content, very fine to fine grained 32.0	896.0		
	GMC 9	90	CH		FAT CLAY, little very fine grained sand, gray, very moist to moist, soft to medium stiff, becoming more lean with depth		50.1, 33.8	
35					36.0	892.0

PROJECT NAME Remedial Investigation
PROJECT NUMBER 2606-0016
PROJECT LOCATION 4400 Otter Lake Road, White Bear Twp., MN 55110
DATE STARTED 6/26/19 **COMPLETED** 6/26/19
GROUND ELEVATION 922 ft **HOLE SIZE** 2.25
DRILLING CONTRACTOR Bergerson Caswell
GROUND WATER LEVELS:
DRILLING METHOD Geoprobe with 4' Macro-Core
AT TIME OF DRILLING 10.5 ft / Elev 911.5 ft
LOGGED BY B Kramka, EIT **CHECKED BY** S Waterman, P.G.
AT END OF DRILLING 8.1 ft / Elev 914.0 ft
NOTES
AFTER DRILLING ---

DEPTH (ft)	SAMPLE TYPE NUMBER	RECOVERY %	U.S.C.S.	GRAPHIC LOG	MATERIAL DESCRIPTION	PID (ppm)
0	GMC 1	100	FILL		Gravel Surfacing (Class 5)	
			FILL		1.0 SILTY SAND with organics (buried TOPSOIL), trace gravel, fine to medium grained, black, slightly moist, medium dense — 921.0	0.8, 0.9
					SILTY SAND (SM), trace organics, poorly graded, dark brown, dense, trace brick and concrete debris	
					3.7 — 918.3	
			FILL		3.9 CLAY with Sand (CL), trace gravel, brown, slightly moist, very stiff — 918.1	
5	GMC 2	90	FILL		SAND with Silt (SP-SM), trace gravel, poorly graded, fine grained, light brown, slightly moist, medium dense, occasional concrete debris	1.2, 1.3
					6.5 — 915.5	
			FILL		7.2 SILTY SAND (SM), poorly graded, fine to medium grained, light brown, moist, medium dense, trace organics (peat, roots and wood), common concrete debris — 914.8	
			FILL		9.2 SILTY SAND (SM), few gravel, poorly graded, fine grained, dark brown, moist, medium dense, trace organics, few concrete debris — 912.8	0.9, 0.1
10	GMC 3	100	PT		PEAT, trace sand and silt, black, very moist to wet, medium stiff, common roots and wood	
					11.7 — 910.3	
			SM		12.5 SILTY SAND, poorly graded, very fine to fine grained, light gray, organic odor, wet, dense, trace organics — 909.5	
	GMC 4	100	SM		SILTY SAND, poorly graded, very fine grained, dark brown to black, wet, very loose, high dilatancy	0.6, 1.4
15					15.3 — 906.7	
			SP-SM		16.0 SAND with Silt, poorly graded, fine grained, gray, wet, dense, trace organics, occasional silt partings — 906.0	
	GMC 5	100	ML		SANDY SILT, gray, wet, soft, frequent fine sand lenses and occasional clay lenses (varved)	0.9, 0.6
					18.5 — 903.5	
20			SC		SANDY LEAN CLAY, gray, wet, soft, frequent interbedded silt and fine sand laminations (varved)	
					20.0 — 902.0	
	GMC 6	90	CL		LEAN CLAY, gray, slightly moist, medium stiff, frequent sand lenses, occasional silt partings	1.1, 1.1
					24.0 — 898.0	
25			CL		25.1 SILT, gray, very moist, very soft, frequent interbedded fine sand, occasional clay and silt interbeds with high plasticity — 896.9	
	GMC 7	69	CL		LEAN CLAY, gray, very moist, soft, frequent sand lenses, occasional silt partings	0.9, 0.9
					28.7 — 893.3	
30	GMC 8	100	ML		SANDY SILT, low plasticity, gray, moist, very soft, frequent fat clay interbeds (27.1-27.3') SILTY SAND lens	1.3, 1.3
					31.6 — 890.4	
			CL		32.0 LEAN CLAY, gray, moist, medium soft, occasional interbedded silt and fat clay — 890.0	
35	GMC 9	100	CH		FAT CLAY, gray, very moist to moist, trace fine sand interbeds, occasional lean clay lenses, becoming more stiff with depth	0.7, 0.8
					36.0 — 886.0	
					Bottom of hole at 36.0 feet.

WELL NUMBER SB-16

CLIENT Water Gremlin
PROJECT NAME Remedial Investigation
PROJECT NUMBER 2606-0016
PROJECT LOCATION 4400 Otter Lake Road, White Bear Twp., MN 55110
DATE STARTED 12/9/19 **COMPLETED** 12/9/19
GROUND ELEVATION 930 ft **HOLE SIZE** 2.25
DRILLING CONTRACTOR Midwestern Drilling, LLC
GROUND WATER LEVELS:
DRILLING METHOD Geoprobe with 5' Macro-Core
AT TIME OF DRILLING 14.0 ft / Elev 916.0 ft
LOGGED BY Ben Holcomb **CHECKED BY** S Waterman, P.G.
AT END OF DRILLING 8.6 ft / Elev 921.4 ft
NOTES
AFTER DRILLING ---

DEPTH (ft)	SAMPLE TYPE NUMBER	RECOVERY %	U.S.C.S.	GRAPHIC LOG	MATERIAL DESCRIPTION	PID (ppm)	WELL DIAGRAM
0					0.5 Concrete Surface (6" core) 929.5		
5	GMC 1	50	FILL		SILTY SAND (SM), trace gravel, very fine grained, dark brown, slightly moist, medium dense (5-12.5') SILTY SAND with Gravel, well graded, medium to coarse grained, dense	2.2, 2.3	
10	GMC 2	90				2.7, 2.7	
15	GMC 3	100	SM		12.5 917.5 SILTY SAND, very fine grained, gray, very moist to wet, dense (14') Slight odor 15.0 915.0	3.9, 4.1	SP-15 Stainless Steel Discrete Sampler (10-13) VOC/1,4-Dioxane Analytical Sample
20	GMC 4	100	SM-ML		SANDY SILT, very fine grained, brown, wet, soft, high dilatancy (20-22') Becoming more dense	3.1, 2.0	SP-15 Stainless Steel Discrete Sampler (18-20) VOC/1,4-Dioxane Analytical Sample
25	GMC 5	100	SC		22.0 908.0 SANDY CLAY, gray, wet, soft 25.0 905.0	2.4, 2.4	
30	GMC 6	100	CH		FAT CLAY, gray, moist, medium stiff 30.0 900.0	2.4, 2.2	SP-15 Stainless Steel Discrete Sampler (25-27) VOC/1,4-Dioxane Analytical Sample
35	GMC 7	100	CL		CLAY, gray, moist, stiff 35.0 895.0	1.5, 1.6	
					Bottom of hole at 35.0 feet.

RE: Project: 2606-0017 Water Gremlin
Pace Project No.: 10488828

Dear Aaron Benker:
Enclosed are the analytical results for sample(s) received by the laboratory on August 23, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nathan Boberg

PROJECT NARRATIVE

Project: 2606-0017 Water Gremlin
Pace Project No.: 10488828

Date: August 26, 2019

SS-26 (Lab ID: 10488828001)

- K1: The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).

SS-27 (Lab ID: 10488828003)

- K1: The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).

SS-28 (Lab ID: 10488828005)

- K3: The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).

SS-29 (Lab ID: 10488828007)

- K2: The Total Hydrocarbon (THC) pattern occured in the second half of the chromatogram (after toluene).

SS-30 (Lab ID: 10488828009)

- K2: The Total Hydrocarbon (THC) pattern occured in the second half of the chromatogram (after toluene).

SS-31 (Lab ID: 10488828011)

- K1: The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).

SS-32 (Lab ID: 10488828013)

- K1: The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).

SS-33 (Lab ID: 10488828015)

- K1: The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).

SS-34 (Lab ID: 10488828017)

- K1: The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).

SS-35 (Lab ID: 10488828019)

- K1: The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).

SS-36 (Lab ID: 10488828021)

- K1: The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).

DUP082319-A (Lab ID: 10488828023)

- K1: The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).

DUP082319-B (Lab ID: 10488828025)

- K1: The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).

SS-37 (Lab ID: 10488828027)

- K1: The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).

PROJECT NARRATIVE

Project: 2606-0017 Water Gremlin
Pace Project No.: 10488828

Method: **TO-15**
Description: TO15 MSV AIR (TICS)
Client: Wenck Associates, Inc.
Date: August 26, 2019

General Information:
14 samples were analyzed for TO-15. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

L2: Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results for this analyte in associated samples may be biased low.

- DUP082319-A (Lab ID: 10488828023)
- DUP082319-B (Lab ID: 10488828025)
- SS-26 (Lab ID: 10488828001)
- SS-27 (Lab ID: 10488828003)
- SS-28 (Lab ID: 10488828005)
- SS-29 (Lab ID: 10488828007)
- SS-30 (Lab ID: 10488828009)
- SS-31 (Lab ID: 10488828011)
- SS-32 (Lab ID: 10488828013)
- SS-33 (Lab ID: 10488828015)
- SS-34 (Lab ID: 10488828017)
- SS-35 (Lab ID: 10488828019)
- SS-36 (Lab ID: 10488828021)
- SS-37 (Lab ID: 10488828027)

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Duplicate Sample:
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

QC Batch: 628279

D6: The precision between the sample and sample duplicate exceeded laboratory control limits.

- DUP (Lab ID: 3390301)

REPORT OF LABORATORY ANALYSIS

Pace Analytical Services, LLC
1700 Elm Street - Suite 200
Minneapolis, MN 55414
(612)607-1700

QUALIFIERS

Project: 2606-0017 Water Gremlin
Pace Project No.: 10488828

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-M Pace Analytical Services - Minneapolis

SAMPLE QUALIFIERS

Sample: 10488828001
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).
Sample: 10488828003
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).
Sample: 10488828005
[1] The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).
Sample: 10488828007
[1] The Total Hydrocarbon (THC) pattern occured in the second half of the chromatogram (after toluene).
Sample: 10488828009
[1] The Total Hydrocarbon (THC) pattern occured in the second half of the chromatogram (after toluene).
Sample: 10488828011
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).
Sample: 10488828013
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).
Sample: 10488828015
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).

QUALIFIERS

Project: 2606-0017 Water Gremlin
Pace Project No.: 10488828

SAMPLE QUALIFIERS

Sample: 10488828017
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).
Sample: 10488828019
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).
Sample: 10488828021
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).
Sample: 10488828023
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).
Sample: 10488828025
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).
Sample: 10488828027
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).

ANALYTE QUALIFIERS

D6	The precision between the sample and sample duplicate exceeded laboratory control limits.
L2	Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results for this analyte in associated samples may be biased low.
N	The reported TIC has an 85% or higher match on a mass spectral library search.

RE: Project: 2606-0017 Water Gremlin
Pace Project No.: 10488827

Dear Aaron Benker:
Enclosed are the analytical results for sample(s) received by the laboratory on August 23, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nathan Boberg

REPORT OF LABORATORY ANALYSIS

Pace Analytical Services, LLC
1700 Elm Street - Suite 200
Minneapolis, MN 55414
(612)607-1700

PROJECT NARRATIVE

Project: 2606-0017 Water Gremlin
Pace Project No.: 10488827

Date: August 26, 2019

SV-1 GS00777 (Lab ID: 10488827001)

- K1: The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).

SV-2 GS00778 (Lab ID: 10488827003)

- K2: The Total Hydrocarbon (THC) pattern occured in the second half of the chromatogram (after toluene).

SV-3 GS00779 (Lab ID: 10488827005)

- K3: The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).

SV-4 GS00780 (Lab ID: 10488827007)

- K2: The Total Hydrocarbon (THC) pattern occured in the second half of the chromatogram (after toluene).

SV-5 GS00781 (Lab ID: 10488827009)

- K2: The Total Hydrocarbon (THC) pattern occured in the second half of the chromatogram (after toluene).

SV-6 GS00782 (Lab ID: 10488827011)

- K3: The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).

SV-7 GS00783 (Lab ID: 10488827013)

- K3: The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).

082319C GS00784 (Lab ID: 10488827015)

- K1: The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).

PROJECT NARRATIVE

Project: 2606-0017 Water Gremlin
Pace Project No.: 10488827

Method: **TO-15**
Description: TO15 MSV AIR (TICS)
Client: Wenck Associates, Inc.
Date: August 26, 2019

General Information:
8 samples were analyzed for TO-15. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

L2: Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results for this analyte in associated samples may be biased low.
- SV-2 GS00778 (Lab ID: 10488827003)
- SV-4 GS00780 (Lab ID: 10488827007)
- SV-5 GS00781 (Lab ID: 10488827009)

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Duplicate Sample:
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

QC Batch: 628279

D6: The precision between the sample and sample duplicate exceeded laboratory control limits.
- DUP (Lab ID: 3390301)
  - Propylene
  - Vinyl chloride

Additional Comments:

Analyte Comments:

QC Batch: 628279

E: Analyte concentration exceeded the calibration range. The reported result is estimated.
- SV-4 GS00780 (Lab ID: 10488827007)
  - Propylene

Pace Analytical Services, LLC
1700 Elm Street - Suite 200

REPORT OF LABORATORY ANALYSIS

Pace Analytical Services, LLC
1700 Elm Street - Suite 200
Minneapolis, MN 55414
(612)607-1700

QUALIFIERS

Project: 2606-0017 Water Gremlin
Pace Project No.: 10488827

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

SAMPLE QUALIFIERS

Sample: 10488827001
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).
Sample: 10488827003
[1] The Total Hydrocarbon (THC) pattern occured in the second half of the chromatogram (after toluene).
Sample: 10488827005
[1] The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).
Sample: 10488827007
[1] The Total Hydrocarbon (THC) pattern occured in the second half of the chromatogram (after toluene).
Sample: 10488827009
[1] The Total Hydrocarbon (THC) pattern occured in the second half of the chromatogram (after toluene).
Sample: 10488827011
[1] The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).
Sample: 10488827013
[1] The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).
Sample: 10488827015
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).

ANALYTE QUALIFIERS

D6 The precision between the sample and sample duplicate exceeded laboratory control limits.

REPORT OF LABORATORY ANALYSIS

Pace Analytical Services, LLC
1700 Elm Street - Suite 200
Minneapolis, MN 55414
(612)607-1700

QUALIFIERS

Project: 2606-0017 Water Gremlin
Pace Project No.: 10488827

ANALYTE QUALIFIERS

E	Analyte concentration exceeded the calibration range. The reported result is estimated.
L2	Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results for this analyte in associated samples may be biased low.
MN	The reporting limit has been raised in accordance with Minnesota Statutes 4740.2100 Subpart 8. C, D. Reporting Limit Evaluation Rule.
N	The reported TIC has an 85% or higher match on a mass spectral library search.

RE: Project: 2606-0017 Water Gremlin
Pace Project No.: 10489390

Dear Aaron Benker:
Enclosed are the analytical results for sample(s) received by the laboratory on August 28, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nathan Boberg

PROJECT NARRATIVE

Project: 2606-0017 Water Gremlin
Pace Project No.: 10489390

Method: **TO-15**
Description: TO15 MSV AIR (TICS)
Client: Wenck Associates, Inc.
Date: August 29, 2019

General Information:
8 samples were analyzed for TO-15. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

QC Batch: 629378

CH: The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high.

- LCS (Lab ID: 3394628)
  - Ethyl acetate
  - Propylene
  - Tetrahydrofuran
  - Vinyl acetate
- SV-11 (Lab ID: 10489390007)
  - Propylene
  - Tetrahydrofuran
- SV-14 (Lab ID: 10489390013)
  - Propylene
- SV-8 (Lab ID: 10489390001)
  - Propylene
  - Tetrahydrofuran

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

QC Batch: 629378

L1: Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

- LCS (Lab ID: 3394628)
  - Propylene
  - Tetrahydrofuran

Pace Analytical Services, LLC

PROJECT NARRATIVE

Project: 2606-0017 Water Gremlin
Pace Project No.: 10489390

Method: **TO-15**
Description: TO15 MSV AIR (TICS)
Client: Wenck Associates, Inc.
Date: August 29, 2019

QC Batch: 629378

L3: Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples.

- LCS (Lab ID: 3394628)
  - Vinyl acetate

Additional Comments:

Analyte Comments:

QC Batch: 629316

E: Analyte concentration exceeded the calibration range. The reported result is estimated.

- SV-10 (Lab ID: 10489390005)
  - Propylene
- SV-13 (Lab ID: 10489390011)
  - Propylene
- SV-9 (Lab ID: 10489390003)
  - Propylene

QC Batch: 629378

D3: Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

- SV-14 (Lab ID: 10489390013)
  - Dichlorodifluoromethane

E: Analyte concentration exceeded the calibration range. The reported result is estimated.

- SV-11 (Lab ID: 10489390007)
  - Propylene

Description: Individual Can Certification
Client: Wenck Associates, Inc.
Date: August 29, 2019

General Information:
8 samples were analyzed for TO-15. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

REPORT OF LABORATORY ANALYSIS

Pace Analytical Services, LLC
1700 Elm Street - Suite 200
Minneapolis, MN 55414
(612)607-1700

QUALIFIERS

Project: 2606-0017 Water Gremlin
Pace Project No.: 10489390

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-M Pace Analytical Services - Minneapolis

SAMPLE QUALIFIERS

Sample: 10489390001
[1] The Total Hydrocarbon (THC) pattern occured in the second half of the chromatogram (after toluene).
Sample: 10489390003
[1] The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).
Sample: 10489390005
[1] The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).
Sample: 10489390007
[1] The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).
Sample: 10489390009
[1] The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).
Sample: 10489390011
[1] The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).
Sample: 10489390013
[1] The Total Hydrocarbon (THC) pattern occured in the second half of the chromatogram (after toluene).
Sample: 10489390015
[1] The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).

QUALIFIERS

Project: 2606-0017 Water Gremlin
Pace Project No.: 10489390

ANALYTE QUALIFIERS

CH	The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high.
D3	Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.
E	Analyte concentration exceeded the calibration range. The reported result is estimated.
L1	Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.
L3	Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples.
N	The reported TIC has an 85% or higher match on a mass spectral library search.

RE: Project: 2606-0017 Water Gremlin
Pace Project No.: 10489670

Dear Aaron Benker:
Enclosed are the analytical results for sample(s) received by the laboratory on August 30, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nathan Boberg

REPORT OF LABORATORY ANALYSIS

Pace Analytical Services, LLC
1700 Elm Street - Suite 200
Minneapolis, MN 55414
(612)607-1700

QUALIFIERS

Project: 2606-0017 Water Gremlin
Pace Project No.: 10489670

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

N	The reported TIC has an 85% or higher match on a mass spectral library search.

RE: Project: 2606-0017 Water Gremlin
Pace Project No.: 10489575

Dear Aaron Benker:
Enclosed are the analytical results for sample(s) received by the laboratory on August 29, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nathan Boberg

PROJECT NARRATIVE

Project: 2606-0017 Water Gremlin
Pace Project No.: 10489575

Method: **TO-15**
Description: TO15 MSV AIR (TICS)
Client: Wenck Associates, Inc.
Date: September 03, 2019

General Information:
1 sample was analyzed for TO-15. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Additional Comments:

REPORT OF LABORATORY ANALYSIS

Pace Analytical Services, LLC
1700 Elm Street - Suite 200
Minneapolis, MN 55414
(612)607-1700

QUALIFIERS

Project: 2606-0017 Water Gremlin
Pace Project No.: 10489575

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-M	Pace Analytical Services - Minneapolis

SAMPLE QUALIFIERS

Sample: 10489575001

[1]	The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).

ANALYTE QUALIFIERS

N	The reported TIC has an 85% or higher match on a mass spectral library search.

RE: Project: 2606-0017 WATER GREMLIN
Pace Project No.: 10489386

Dear Aaron Benker:
Enclosed are the analytical results for sample(s) received by the laboratory on August 28, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Oyeyemi Odujole

REPORT OF LABORATORY ANALYSIS

Pace Analytical Services, LLC
1700 Elm Street - Suite 200
Minneapolis, MN 55414
(612)607-1700

QUALIFIERS

Project: 2606-0017 WATER GREMLIN
Pace Project No.: 10489386

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: 2606-0017 Water Gremlin
Pace Project No.: 10489552

Dear Aaron Benker:
Enclosed are the analytical results for sample(s) received by the laboratory on August 29, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Oyeyemi Odujole

QUALIFIERS

Project: 2606-0017 Water Gremlin
Pace Project No.: 10489552

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

R1 RPD value was outside control limits.

RE: Project: 2606-0017 Water Gremlin
Pace Project No.: 10489715

Dear Aaron Benker:
Enclosed are the analytical results for sample(s) received by the laboratory on August 30, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Oyeyemi Odujole

QUALIFIERS

Project: 2606-0017 Water Gremlin
Pace Project No.: 10489715

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: 2606-0017 Water Gremlin
Pace Project No.: 10491723

Dear Aaron Benker:
Enclosed are the analytical results for sample(s) received by the laboratory on September 16, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Oyeyemi Odujole

REPORT OF LABORATORY ANALYSIS

Pace Analytical Services, LLC
1700 Elm Street - Suite 200
Minneapolis, MN 55414
(612)607-1700

QUALIFIERS

Project: 2606-0017 Water Gremlin
Pace Project No.: 10491723

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

SAMPLE QUALIFIERS

Sample: 10491723001
[1] The Total Hydrocarbon (THC) pattern occured in the second half of the chromatogram (after toluene).
Sample: 10491723002
[1] The Total Hydrocarbon (THC) pattern occured in the second half of the chromatogram (after toluene).
Sample: 10491723003
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).
Sample: 10491723004
[1] The Total Hydrocarbon (THC) pattern occured in the second half of the chromatogram (after toluene).
Sample: 10491723005
[1] The Total Hydrocarbon (THC) pattern occured in the second half of the chromatogram (after toluene).
Sample: 10491723006
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).
Sample: 10491723007
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).
Sample: 10491723008
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).
Sample: 10491723009
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).

QUALIFIERS

Project: 2606-0017 Water Gremlin
Pace Project No.: 10491723

SAMPLE QUALIFIERS

Sample: 10491723010
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).
Sample: 10491723011
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).
Sample: 10491723012
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).
Sample: 10491723013
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).
Sample: 10491723014
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).

ANALYTE QUALIFIERS

E Analyte concentration exceeded the calibration range. The reported result is estimated.

RE: Project: 2606-0017 Water Gremlin
Pace Project No.: 10491830

Dear Aaron Benker:
Enclosed are the analytical results for sample(s) received by the laboratory on September 17, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Oyeyemi Odujole

REPORT OF LABORATORY ANALYSIS

Pace Analytical Services, LLC
1700 Elm Street - Suite 200
Minneapolis, MN 55414
(612)607-1700

QUALIFIERS

Project: 2606-0017 Water Gremlin
Pace Project No.: 10491830

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: 2606-0017 Water Gremlin
Pace Project No.: 10491768

Dear Aaron Benker:
Enclosed are the analytical results for sample(s) received by the laboratory on September 17, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Oyeyemi Odujole

REPORT OF LABORATORY ANALYSIS

Pace Analytical Services, LLC
1700 Elm Street - Suite 200
Minneapolis, MN 55414
(612)607-1700

QUALIFIERS

Project: 2606-0017 Water Gremlin
Pace Project No.: 10491768

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

SAMPLE QUALIFIERS

Sample: 10491768001
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).
Sample: 10491768003
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).
Sample: 10491768005
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).
Sample: 10491768007
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).
Sample: 10491768009
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).

ANALYTE QUALIFIERS

E	Analyte concentration exceeded the calibration range. The reported result is estimated.
MN	The reporting limit has been raised in accordance with Minnesota Statutes 4740.2100 Subpart 8. C, D. Reporting Limit Evaluation Rule.

RE: Project: 2606-0017 Water Gremlin
Pace Project No.: 10494005

Dear Aaron Benker:
Enclosed are the analytical results for sample(s) received by the laboratory on October 03, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Oyeyemi Odujole

Minneapolis, MN 55414
(612)607-1700

QUALIFIERS

Project: 2606-0017 Water Gremlin
Pace Project No.: 10494005

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

SAMPLE QUALIFIERS

QUALIFIERS

Project: 2606-0017 Water Gremlin
Pace Project No.: 10494005

ANALYTE QUALIFIERS

CH	The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high.
E	Analyte concentration exceeded the calibration range. The reported result is estimated.
L3	Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples.

RE: Project: 2606-0017 Water Gremlin
Pace Project No.: 10494257

Dear Aaron Benker:
Enclosed are the analytical results for sample(s) received by the laboratory on October 04, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Oyeyemi Odujole

REPORT OF LABORATORY ANALYSIS

Pace Analytical Services, LLC
1700 Elm Street - Suite 200
Minneapolis, MN 55414
(612)607-1700

QUALIFIERS

Project: 2606-0017 Water Gremlin
Pace Project No.: 10494257

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

SAMPLE QUALIFIERS

Sample: 10494257001

[1] The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).

ANALYTE QUALIFIERS

CH The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high.

L3 Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples.

RE: Project: 2606-0017 Water Gremlin
Pace Project No.: 10493999

Dear Aaron Benker:
Enclosed are the analytical results for sample(s) received by the laboratory on October 03, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Oyeyemi Odujole

REPORT OF LABORATORY ANALYSIS

Pace Analytical Services, LLC
1700 Elm Street - Suite 200
Minneapolis, MN 55414
(612)607-1700

QUALIFIERS

Project: 2606-0017 Water Gremlin
Pace Project No.: 10493999

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

SAMPLE QUALIFIERS

Sample: 10493999001
[1] The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).
Sample: 10493999002
[1] The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).
Sample: 10493999003
[1] The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).
Sample: 10493999004
[1] The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).
Sample: 10493999005
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).
Sample: 10493999006
[1] The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).
Sample: 10493999007
[1] The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).
Sample: 10493999008
[1] The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).
Sample: 10493999009
[1] The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).

RE: Project: 2606-0017 Water Gremlin
Pace Project No.: 10494260

Dear Aaron Benker:
Enclosed are the analytical results for sample(s) received by the laboratory on October 04, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Oyeyemi Odujole

REPORT OF LABORATORY ANALYSIS

Pace Analytical Services, LLC
1700 Elm Street - Suite 200
Minneapolis, MN 55414
(612)607-1700

QUALIFIERS

Project: 2606-0017 Water Gremlin
Pace Project No.: 10494260

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

SAMPLE QUALIFIERS

Sample: 10494260001

[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).

Sample: 10494260002

[1] The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).

Sample: 10494260003

[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).

ANALYTE QUALIFIERS

CH	The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high.
L3	Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples.

RE: Project: 2606-0017 Water Gremlin
Pace Project No.: 10494294

Dear Aaron Benker:
Enclosed are the analytical results for sample(s) received by the laboratory on October 04, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Oyeyemi Odujole

1700 Elm Street - Suite 200
Minneapolis, MN 55414
(612)607-1700

ANALYTICAL RESULTS

Project: 2606-0017 Water Gremlin
Pace Project No.: 10494294

Sample: SB-1 (6-6.5) **Lab ID: 10494294003** Collected: 10/04/19 09:30 Received: 10/04/19 15:42 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

Parameters	Results	Units	Report Limit	DF	Prepared	Analyzed	CAS No.	Qual
Dry Weight / %M by ASTM D2974	Analytical Method: ASTM D2974							
Percent Moisture	**2.7**	%	0.10	1		10/10/19 12:39		
8260B MSV 5030 Med Level	Analytical Method: EPA 8260B Preparation Method: EPA 5035/5030B

ANALYTICAL RESULTS

Project: 2606-0017 Water Gremlin
Pace Project No.: 10494294

Sample: SB-3 (6-8) **Lab ID: 10494294008** Collected: 10/04/19 10:45 Received: 10/04/19 15:42 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: 2606-0017 Water Gremlin
Pace Project No.: 10494294

Sample: SB-5 (6-8) **Lab ID: 10494294016** Collected: 10/04/19 13:00 Received: 10/04/19 15:42 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: 2606-0017 Water Gremlin
Pace Project No.: 10494294

Sample: SB-6 (0-1) **Lab ID: 10494294019** Collected: 10/04/19 14:10 Received: 10/04/19 15:42 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

Pace Analytical Services, LLC
1700 Elm Street - Suite 200
Minneapolis, MN 55414
(612)607-1700

QUALIFIERS

Project: 2606-0017 Water Gremlin
Pace Project No.: 10494294

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

CH	The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high.
L2	Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results for this analyte in associated samples may be biased low.
L3	Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
M6	Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.
MN	The reporting limit has been raised in accordance with Minnesota Statutes 4740.2100 Subpart 8. C, D. Reporting Limit Evaluation Rule.
P6	Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.
R1	RPD value was outside control limits.
SS	This analyte did not meet the secondary source verification criteria for the initial calibration. The reported result should be considered an estimated value.

RE: Project: 2606-0017 Water Gremlin
Pace Project No.: 10494421

Dear Aaron Benker:
Enclosed are the analytical results for sample(s) received by the laboratory on October 07, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Oyeyemi Odujole
