QUALIFIERS

Project: 2606-0017 Water Gremlin
Pace Project No.: 10502086

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

1M	The sample was analyzed at a dilution due to a large amount of sediment in the vials.
CH	The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high.
L3	Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples.
M0	Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
MN	The reporting limit has been raised in accordance with Minnesota Statutes 4740.2100 Subpart 8. C, D. Reporting Limit Evaluation Rule.
N2	The lab does not hold NELAC/TNI accreditation for this parameter but other accreditations/certifications may apply. A complete list of accreditations/certifications is available upon request.
S3	Surrogate recovery exceeded laboratory control limits. Analyte presence below reporting limits in associated sample.
SS	This analyte did not meet the secondary source verification criteria for the initial calibration. The reported result should be considered an estimated value.

RE: Project: 2606-0017 Water Gremlin SRI
Pace Project No.: 10502228

Dear Aaron Benker:
Enclosed are the analytical results for sample(s) received by the laboratory on December 11, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Oyeyemi Odujole

ANALYTICAL RESULTS

Project: 2606-0017 Water Gremlin SRI
Pace Project No.: 10502228

Sample: GP-30 (0-1) **Lab ID: 10502228001** Collected: 12/11/19 11:30 Received: 12/11/19 16:57 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

Parameters	Results	Units	Report Limit	DF	Prepared	Analyzed	CAS No.	Qual
6010D MET ICP	Analytical Method: EPA 6010D Preparation Method: EPA 3050

(612)607-1700

ANALYTICAL RESULTS

Project: 2606-0017 Water Gremlin SRI
Pace Project No.: 10502228

Sample: GP-30 (25-27) **Lab ID: 10502228003** Collected: 12/11/19 12:20 Received: 12/11/19 16:57 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

Pace Analytical Services, LLC
1700 Elm Street - Suite 200
Minneapolis, MN 55414
(612)607-1700

QUALIFIERS

Project: 2606-0017 Water Gremlin SRI
Pace Project No.: 10502228

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

1M	Post-analysis pH measurement indicates insufficient VOA sample preservation. Therefore, analysis was conducted outside the recognized method holding time.
CH	The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high.
L3	Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples.
M0	Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
MN	The reporting limit has been raised in accordance with Minnesota Statutes 4740.2100 Subpart 8. C, D. Reporting Limit Evaluation Rule.
N2	The lab does not hold NELAC/TNI accreditation for this parameter but other accreditations/certifications may apply. A complete list of accreditations/certifications is available upon request.
R1	RPD value was outside control limits.
SS	This analyte did not meet the secondary source verification criteria for the initial calibration. The reported result should be considered an estimated value.

RE: Project: 2606-0017 Water Gremlin SRI
Pace Project No.: 10502407

Dear Aaron Benker:
Enclosed are the analytical results for sample(s) received by the laboratory on December 12, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Oyeyemi Odujole

REPORT OF LABORATORY ANALYSIS

Pace Analytical Services, LLC
1700 Elm Street - Suite 200
Minneapolis, MN 55414
(612)607-1700

ANALYTICAL RESULTS

Project: 2606-0017 Water Gremlin SRI
Pace Project No.: 10502407

Sample: GP-32 (0-1) **Lab ID: 10502407007** Collected: 12/12/19 13:30 Received: 12/12/19 16:57 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

Parameters	Results	Units	Report Limit	DF	Prepared	Analyzed	CAS No.	Qual

Minneapolis, MN 55414
(612)607-1700

QUALIFIERS

Project: 2606-0017 Water Gremlin SRI
Pace Project No.: 10502407

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

1M	Re-extract in hold
2M	Relative percent difference within 30% of original analysis.
CH	The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high.
L1	Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.
L3	Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples.
M0	Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
MN	The reporting limit has been raised in accordance with Minnesota Statutes 4740.2100 Subpart 8. C, D. Reporting Limit Evaluation Rule.
N2	The lab does not hold NELAC/TNI accreditation for this parameter but other accreditations/certifications may apply. A complete list of accreditations/certifications is available upon request.
R1	RPD value was outside control limits.
S0	Surrogate recovery outside laboratory control limits.
S3	Surrogate recovery exceeded laboratory control limits. Analyte presence below reporting limits in associated sample.
SS	This analyte did not meet the secondary source verification criteria for the initial calibration. The reported result should be considered an estimated value.

RE: Project: 2606-0017 Water Gremlin SRI
Pace Project No.: 10502608

Dear Aaron Benker:
Enclosed are the analytical results for sample(s) received by the laboratory on December 13, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Oyeyemi Odujole

ANALYTICAL RESULTS

Project: 2606-0017 Water Gremlin SRI
Pace Project No.: 10502608

Sample: GP-33 (4-5) **Lab ID: 10502608004** Collected: 12/13/19 09:55 Received: 12/13/19 13:22 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

QUALIFIERS

Project: 2606-0017 Water Gremlin SRI
Pace Project No.: 10502608

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

1M	The sample was analyzed at a dilution due to a large amount of sediment in the vials.
CH	The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high.
HS	Results are from sample aliquot taken from VOA vial with headspace (air bubble greater than 6 mm diameter).
L3	Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
MN	The reporting limit has been raised in accordance with Minnesota Statutes 4740.2100 Subpart 8. C, D. Reporting Limit Evaluation Rule.
N2	The lab does not hold NELAC/TNI accreditation for this parameter but other accreditations/certifications may apply. A complete list of accreditations/certifications is available upon request.
R1	RPD value was outside control limits.
SS	This analyte did not meet the secondary source verification criteria for the initial calibration. The reported result should be considered an estimated value.

RE: Project: 2606-0017 Water Gremlin
Pace Project No.: 10504882

Dear Mr. Waterman:
Enclosed are the analytical results for sample(s) received by the laboratory on January 09, 2020. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Oyeyemi Odujole

REPORT OF LABORATORY ANALYSIS

Pace Analytical Services, LLC
1700 Elm Street - Suite 200
Minneapolis, MN 55414
(612)607-1700

QUALIFIERS

Project: 2606-0017 Water Gremlin
Pace Project No.: 10504882

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

SAMPLE QUALIFIERS

Sample: 10504882001
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).
Sample: 10504882003
[1] The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).
Sample: 10504882005
[1] The Total Hydrocarbon (THC) pattern occured in the second half of the chromatogram (after toluene).
Sample: 10504882007
[1] The Total Hydrocarbon (THC) pattern occured in the second half of the chromatogram (after toluene).
Sample: 10504882009
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).
Sample: 10504882011
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).
Sample: 10504882013
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).
Sample: 10504882015
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).
Sample: 10504882017
[1] The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).

Pace Analytical Services, LLC

(612)607-1700

QUALIFIERS

Project: 2606-0017 Water Gremlin
Pace Project No.: 10504882

SAMPLE QUALIFIERS

Sample: 10504882019
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).
Sample: 10504882021
[1] The Total Hydrocarbon (THC) pattern occured in the first half of the chromatogram (before toluene).

ANALYTE QUALIFIERS

E Analyte concentration exceeded the calibration range. The reported result is estimated.

RE: Project: 2606-0017 Water Gremlin
Pace Project No.: 10505017

Dear Mr. Waterman:
Enclosed are the analytical results for sample(s) received by the laboratory on January 10, 2020. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Oyeyemi Odujole

QUALIFIERS

Project: 2606-0017 Water Gremlin
Pace Project No.: 10505017

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

SAMPLE QUALIFIERS

Sample: 10505017001
[1] The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).
Sample: 10505017003
[1] The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).
Sample: 10505017005
[1] The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).
Sample: 10505017007
[1] The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).
Sample: 10505017009
[1] The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).
Sample: 10505017011
[1] The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).
Sample: 10505017013
[1] The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).
Sample: 10505017015
[1] The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).
Sample: 10505017017
[1] The Total Hydrocarbon (THC) pattern is evenly distributed throughout the chromatogram (before and after toluene).

ORGANIC AIR QUALITY REPORT
METHOD TO-15

LAB NO: 10488827, 10488828, 10489390, 10489575, 10489670, 10491723, 10491768, 10491830, 10493999, 10494005, 10494257, 10494260, 10494433, 10495024, 10495155, 10497227

PROJECT: Water Gremlin, MN; Project # 2606-0017 Water Gremlin, Wenck Environmental Consulting and Engineering

LABORATORY: Pace Analytical, Minneapolis, MN

SAMPLE MATRIX: Air

SAMPLING DATE (Month/Year): 8/2019, 9/2019, 10/2019

NUMBER OF SAMPLES: 112 air samples including 13 blind field duplicates

ANALYSES REQUESTED: Summa Canister VOA TO-15

SAMPLE NO.: See Attached List

DATA REVIEWER: John Huntington

QA REVIEWER: Diane Short & Associates, Inc. INITIALS/DATE: ____ DLS ___01/06/2020_____

Telephone Logs included Yes____ No __X__

Contractual Violations Yes____ No __X_

The EPA CLP National Functional Guidelines for Organic Data Review, 1999 and 2017 (SOP), EPA Method TO-15 current updates, and the Quality Assurance Plan, MPCA Site Assessment Program (2014) have been used by the reviewer to perform this data validation review. The EPA qualifiers have been expanded to include a descriptor code and value to define QC violations and their values, per the approval of the Project Manager. Per the Scope of Work, the review of these samples includes validation of all QC forms referencing the QC limits in the above documents. For 10% of the data, chromatograms and mass spectra have been reviewed for each type of analysis and comments made on general data/ analytical quality.

DELIVERABLES
All deliverables were present as specified in the Statement of Work (SOW) or in the project contract.
Yes _X__ No___

II. ANALYTICAL REPORT FORMS
A. The Analytical Report or Data Sheets are present and complete for all requested analyses.
Yes _X__ No ___

B. Holding Times
The contract holding times were met for all analyses (Time of sample receipt to time of analysis (VOA) or extraction and from extraction to analysis). Contract holding times for TO-15 canisters is 30 days from date of collection.
Yes __X___ No ____

C. Chains of Custody
Chains of Custody were present and were complete with signatures, sign-offs and complete entry of data. Canisters were properly sampled and received.
Yes _X___ No _____
Not all cross-outs were initialed. This occurred on the COCs for 10491768, 10491830, 10493999, 10494005, 10495024, and 10497227. Although these are imperfections in the COCs for these projects, the reason for the change is obvious and the issues appear minor. No qualifiers are added.

There are a few instances where the time received was recorded as a few minutes different than the relinquishment time. This occurred in SDGs 10491768, 10491830, 10493999, and 10494005. This is a common discrepancy related to the time to perform the log-in procedure - no qualifiers re applied.

D. Canister Pressure
Canister pressures were measured and recorded for initial vacuum check, initial field vacuum, final field reading, lab initial pressure and final pressure.
Yes __X__ No _____
Initial field and final field pressure were recorded on the COC. The laboratory pressurization was recorded on the sample receipt form. There are a few discrepancies, however, as follows:
SDG 10488828: Field readings are not recorded on the COC.
SDG 10489390: The final field reading is not recorded on the COC for sample SV-14.
SDG 10491723: The field readings are not recorded on the COC for SS-9. The final field reading is not recorded on the COC for SS-2.

No qualifiers are added.

All readings met the limits or exceptions were noted and pressure corrected
Yes __X___ No ___

III. INSTRUMENT CALIBRATION

A. Initial Calibration – GC/MS
1. The Relative Response Factors (RRF) and average RRF for all compounds for all analyses met the required criteria.
Yes __X___ No ___
The initial calibration reports are extremely faint and very difficult to read. The laboratory needs to produce better quality copies. TO-15 does not specify minimum response factors. We have used the NFG criteria for

VOA analyses as a guide. The response factors for TO-15 are typically higher than those in water analysis. All relative response factors for these analyses are above 0.05.

2. The relative standard deviation (RSD) for the five-point calibration was within the 30% limit.
Yes __X_ No ____
In some cases the laboratory has used a nonlinear regression curve. In such cases, the r value is >0.99. TO-15 does not include guidance for the use of non-linear regression. However, this is normally considered acceptable to EPA.

B. Continuing Calibration – GC/MS
1. The RRF standard was analyzed for each analysis at the required frequency and the QC criteria were met
Yes __X__ No____

2. The percent difference (%D) limits were met.
Yes __X__ No ____

IV. GC/MS INSTRUMENT PERFORMANCE CHECK
A. The BFB performance check was injected once at the beginning of each 12-hour period and relative abundance criteria for the ions were met.
Yes ___X__ No_____NA ____

B. The SIM PFTBA tune was performed once a month per the TO-15 criteria and the HP operation manual masses were present.
Yes ___ No ____NA__X__
SIM analysis not requested or conducted.

V. INTERNAL STANDARDS
A. Area Limits
The Internal Standards met the TO-15 upper and lower limits criteria (+/- 40%) and the Retention times were within the required windows.
Yes __X__ No ____
The laboratory has not provided a summary tabulation of the internal standard areas and retention times. The raw data includes a summary for each sample, but these have to be found manually and reviewed. This requires a raw data review for each sample, so we have done this review on a 10% basis. All internal standards reviewed met TO-15 criteria.

B. Retention Times
The relative retention times of the internal standards and sample compounds met the ± 0.06 RRT units limit.
Yes __X__ No____
See the comment above.

VI. SURROGATE
Surrogate spikes were analyzed with every sample.
Yes _____ No __X__
This is not required for Method TO-15.

And met the recovery limits defined in the current contract
Yes ___ No ____NA__X_____

VII. MATRIX SPIKE/MATRIX SPIKE DUPLICATE

A. Matrix spike (MS) and matrix spike duplicates (MSD) were analyzed for every analysis performed and for every 20 samples or for every matrix whichever is more frequent.
Yes____ No ____NA ___X__
Spikes are not amenable to canister analysis and are not required. Laboratory duplicates are required. These were present.

B. The MD relative percent differences (RPD) were within the defined contract limits.
Yes __X_ No ____NA _____

VIII. CONTROL SAMPLES
A. Control samples similar to Laboratory Control Samples (LCS) were performed for every set.
Yes __X__ No____

B. And percent recoveries were acceptable at 70 – 130%.
Yes ___ No ___X__
There were elevated recoveries for some analytes on LCS runs. For these cases, no qualifiers are added for non-detects, but detected analytes are qualified as JL#, where # is the applicable recovery. Results could be biased very slightly high proportional to the recovery. Qualifiers added are shown in the table below.

Client ID	Lab ID	Analyte	Result	Units	MDL	DSA	EPA
SV-8	10489390001	Propylene	1030	ug/m3	7.7	JL132	J+
SV-8	10489390001	Tetrahydrofuran	18.1	ug/m3	0.47	JL135	J+
SV-11	10489390007	Propylene	301.0	ug/m3	0.27	JL132	J+
SV-11	10489390007	Tetrahydrofuran	28.0	ug/m3	0.49	JL135	J+
SV-14	10489390013	Propylene	84.1	ug/m3	4.1	JL132	J+
IA-8	10494005009	Ethylbenzene	1.6	ug/m3	0.49	JL131	J+

C. And Relative Percent Differences were within lab limits.
Yes ____ No____ NA__X_
Duplicate control checks are not required by the method.

IX. SHIFT CHECKS
Shift checks were performed and were within time limits.
Yes _X___ No____
The BFB tune check is required every 24 hours in Method TO-15.

X. BLANKS
A. Method Blanks were analyzed at the required frequency and for each matrix and analysis.
Yes __X___ No____
This is a nitrogen blank run with each set.

B. The method blank was free of contamination.
Yes __X___ No _____

C. If Field Blanks were identified, they were free of contamination.
Yes ____ No ____ NA ___X__
Field blanks have not been identified.

D. Contamination level was less than 0.03 mg/cubic meter before samples were analyzed per the method.
Yes __X_ No____ NA _____
A representative set of canisters was screened for contamination at the laboratory for each SDG.

XI. FIELD QC
A. If Field duplicates or Performance Check Compounds were identified, they met the RPD or % recovery criteria for the project.
Yes ___ No __X__ NA____
The QAPP defines a 50% RPD requirement for field duplicates. There are 13 field duplicates blind to the laboratory, as shown in the table below.

Field Duplicate ID	Sample ID
DUP082319-A	SS-35
DUP082319-B	SS-36
DUP082819	SV-12
DUP091619-A	SS-8
DUP091619-B	SS-15
DUP100219	IA-9
DUP100319	SS-14
Duplicate 10/7/19	SS-19
Dup 10/9/19	IA-12
Dup 2 10/9/19	AA-11
Dup 10/10/19	SS-36
Dup 10/28/19	SV-20
082319C GS00784	SV-3 GS00779

There are several outliers that required qualifiers. These are shown in the table below. If either duplicate or sample is 5x RL or higher, the RPD is used for the qualifier if it exceeds 50%. If the result is < 5x RL, then if the absolute difference is >2x RL, the result is qualified as JFD*#, where # is the difference. In cases where there is a non-detect in one sample but a detection in the other, the RL is used as the value in the non-detected sample for the purposes of calculating differences. As the RPD or difference increases, the precision decreases.

XII. SYSTEM PERFORMANCE

The RICs, chromatograms, tunes and general system performance were acceptable for all instruments and analytical systems .

Yes__X_ No ____ NA_____

XIII. TCL COMPOUNDS

A. The identification is accurate and all retention times, library spectra and reconstructed ion chromatograms (RIC) were evaluated for all detected compounds:

For this project, ten percent of the data are fully review for chromatograms and spectra.

Yes__X_ No ____ NA_____

B. Quantitation was checked to determine the accuracy of calculations for representative compounds in each internal standard set

Yes__X_ No ____ NA_____

XIV. TENTATIVELY IDENTIFIED COMPOUNDS (TIC)

TICs were properly identified and met the library identification criteria.

Yes__X__ No ____ NA____

TICs were reported.

Tentatively identified compounds (TICs) were reported for the air samples. A 10% review of the mass spectral matches was conducted. As is typical, the certainty of identification of the TICs is variable because even with a good match to the published library spectra, the retention times are not compared to standards. Most of the mass spectral matches are good, and in cases where they are poor, the TIC is reported as “unknown.”

In this case, most of the TICs identified are hydrocarbons of various types. Although the library match is to a specific isomer, many hydrocarbon isomers give very similar mass spectra. Therefore, the general nature of the hydrocarbon (alkane, unsaturated alkane or cycloalkane, bicyclic hydrocarbon, etc.) is likely

to be correct, but the specific isomer reported could be incorrect. These results should be used with these caveats in mind. Data are qualified 'JN' to indicate estimated result and identification.

OVERALL ASSESSMENT

Data are considered to be usable for project purposes. Qualifiers are added for field precision and for a possible laboratory spike bias. Data are fully usable with consideration of the potential biases. A summary of key points follows.

Chain of Custody

Not all cross-outs were initialed. This occurred on the COCs for 10491768, 10491830, 10493999, 10494005, 10495024, and 10497227. Although these are imperfections in the COCs for these projects, the reason for the change is obvious and the issues appear minor. No qualifiers are added.

There are a few instances where the time received was recorded as a few minutes different than the relinquishment time. This occurred in SDGs 10491768, 10491830, 10493999, and 10494005. This is a common discrepancy related to the time to perform the log-in procedure - no qualifiers re applied.

Canister Pressures

Initial field and final field pressure were recorded on the COC. The laboratory pressurization was recorded on the sample receipt form. There are a few discrepancies, however, as follows:
SDG 10488828: Field readings are not recorded on the COC.
SDG 10489390: The final field reading is not recorded on the COC for sample SV-14.
SDG 10491723: The field readings are not recorded on the COC for SS-9. The final field reading is not recorded on the COC for SS-2.

No qualifiers are added.

Laboratory Control Samples

There were elevated recoveries for some analytes on LCS runs. For these cases, no qualifiers are added for non-detects, but detected analytes are qualified as JL#, where # is the applicable recovery. Qualifiers added are shown in the table within this report. Results could be biased slightly high proportional to the recovery.

Internal Standards

The laboratory has not provided a summary tabulation of the internal standard areas and retention times. The raw data includes a summary for each sample, but these have to be found manually and reviewed. This requires a raw data review for each sample, so we have done this review on a 10% basis. All internal standards reviewed met TO-15 criteria.

Field Duplicates

The QAPP defines a 50% RPD requirement for field duplicates. There are 13 field duplicates blind to the laboratory, as shown in the table below.

Field Duplicate ID	Sample ID
DUP082319-A	SS-35
DUP082319-B	SS-36
DUP082819	SV-12
DUP091619-A	SS-8

DUP091619-B	SS-15
DUP100219	IA-9
DUP100319	SS-14
Duplicate 10/7/19	SS-19
Dup 10/9/19	IA-12
Dup 2 10/9/19	AA-11
Dup 10/10/19	SS-36
Dup 10/28/19	SV-20
082319C GS00784	SV-3 GS00779

There are several outliers that required qualifiers. These are shown in the table below. If either duplicate or sample is 5x RL or higher, the RPD is used for the qualifier if it exceeds 50%. If the result is < 5x RL, then if the absolute difference is >2x RL, the result is qualified as JFD*#, where # is the difference. In cases where there is a non-detect in one sample but a detection in the other, the RL is used as the value in the non-detected sample for the purposes of calculating differences. As the RPD or difference increases, the precision decreases.

TICs

Tentatively identified compounds (TICs) were reported for the air samples. A 10% review of the mass spectral matches was conducted. As is typical, the certainty of identification of the TICs is variable because even with a good match to the published library spectra, the retention times are not compared to standards. Most of the mass spectral matches are good, and in cases where they are poor, the TIC is reported as "unknown."

In this case, most of the TICs identified are hydrocarbons of various types. Although the library match is to a specific isomer, many hydrocarbon isomers give very similar mass spectra. Therefore, the general nature of the hydrocarbon (alkane, unsaturated alkane or cycloalkane, bicyclic hydrocarbon, etc.) is likely to be correct, but the specific isomer reported could be incorrect. These results should be used with these caveats in mind. Data are qualified 'JN' to indicate estimated result and identification.

Table of Qualifiers Added

Client ID	Lab ID	Analyte	Result	Units	MDL	DSA	EPA

ORGANIC AIR QUALITY REPORT
METHOD TO-15

LAB NO: 10501524, 10504882, 10505017

PROJECT: Water Gremlin, MN; Project # 2606-0017 Water Gremlin, Wenck Environmental Consulting and Engineering

LABORATORY: Pace Analytical, Minneapolis, MN

SAMPLE MATRIX: Air

SAMPLING DATE (Month/Year): 12/2019, 1/2020

NUMBER OF SAMPLES: 46 air samples including 5 blind field duplicates, 1 equipment blank and 1 trip blank

ANALYSES REQUESTED: Summa Canister VOA TO-15

SAMPLE NO.: See Attached List

DATA REVIEWER: John Huntington

QA REVIEWER: Diane Short & Associates, Inc. INITIALS/DATE: ____ DLS _____2/13/2020___

Telephone Logs included Yes____ No __X__

Contractual Violations Yes____ No __X_

The EPA CLP National Functional Guidelines for Organic Data Review, 1999 and 2017 (SOP), EPA Method TO-15 current updates, and the Quality Assurance Plan, MPCA Site Assessment Program (2014) have been used by the reviewer to perform this data validation review. The EPA qualifiers have been expanded to include a descriptor code and value to define QC violations and their values, per the approval of the Project Manager. Per the Scope of Work, the review of these samples includes validation of all QC forms referencing the QC limits in the above documents. For 10% of the data, chromatograms and mass spectra have been reviewed for each type of analysis and comments made on general data/ analytical quality.

I. DELIVERABLES

All deliverables were present as specified in the Statement of Work (SOW) or in the project contract.
Yes _X_ No ___

II. ANALYTICAL REPORT FORMS

A. The Analytical Report or Data Sheets are present and complete for all requested analyses.
Yes _X_ No ___

B. Holding Times

The contract holding times were met for all analyses (Time of sample receipt to time of analysis (VOA) or extraction and from extraction to analysis). Contract holding times for TO-15 canisters is 30 days from date of collection.
Yes __X___ No ____

C. Chains of Custody

Chains of Custody were present and were complete with signatures, sign-offs and complete entry of data. Canisters were properly sampled and received.
Yes ____ No _X_____
SDGs 10504882 and 10505017 contained samples taken during January of 2020. The sampler filled out the COC incorrectly, showing January of 2019 in all cases. The relinquishment date is also shown as being in January of 2019, but the date received by the laboratory is shown as January of 2020. The laboratory has shown all collection dates as being in January of 2020 for these samples but has not made any comment about the change from the entered dates on the COC.

In one case (DUP010920 in SDG 10504882), the laboratory has failed to correct the collection date and it is shown as 1/9/2019 in the laboratory report and in the lab EDD. The actual sample date appears to have been 1/9/2020 for this sample, in accord with all the others in the set.

Although this is an obvious issue associated with human error at the start of a new year, the laboratory should provide a comment about the changes and their reason. In addition, the COC should be corrected, or an explanation provided by the sampler, for the project record. There are no qualifiers applied, but these samples could be challenged unless a correction/explanation is provided.

Normally, these types of issues are discussed in the Case Narrative. The laboratory, however, continues its practice of not providing such a narrative, and there are no comments about the problem in the sample receiving documents.

D. Canister Pressure

Canister pressures were measured and recorded for initial vacuum check, initial field vacuum, final field reading, lab initial pressure and final pressure.
Yes ____ No __X____
Initial field and final field pressure were recorded on the COC. The laboratory pressurization was recorded on the sample receipt form. There is one discrepancy, as follows:
SDG 10501524: For sample SV-11 the initial field reading is recorded on the COC as -14 and a final field reading of -1, whereas the other samples in this SDG show an initial field reading near -30. On the sample receiving documents the sample receipt pressure reading is shown as -14 for that sample, whereas it is close to the final field reading for the other samples. This suggests that the pressure gauge for the SV-11 canister may not have been reading correctly in the field.

E. All readings met the limits or exceptions were noted and pressure corrected.
Yes __X___ No ___
See note above

III. INSTRUMENT CALIBRATION
A. Initial Calibration – GC/MS
1. The Relative Response Factors (RRF) and average RRF for all compounds for all analyses met the required criteria.
Yes __X___ No ___
The initial calibration reports are extremely faint and very difficult to read. The laboratory needs to produce better quality copies. TO-15 does not specify minimum response factors. We have used the NFG criteria for VOA analyses as a guide. The response factors for TO-15 are typically higher than those in water analysis. All relative response factors for these analyses are above 0.05.

2. The relative standard deviation (RSD) for the five-point calibration was within the 30% limit.
Yes __X_ No ____
In some cases the laboratory has used a nonlinear regression curve. In such cases, the r value is >0.99. TO-15 does not include guidance for the use of non-linear regression. However, this is normally considered acceptable to EPA.

B. Continuing Calibration – GC/MS
1. The RRF standard was analyzed for each analysis at the required frequency and the QC criteria were met
Yes __X__ No____

2. The percent difference (%D) limits were met.
Yes __ X __ No ____

IV. GC/MS INSTRUMENT PERFORMANCE CHECK
A. The BFB performance check was injected once at the beginning of each 12-hour period and relative abundance criteria for the ions were met.
Yes ___X__ No____ NA ____

B. The SIM PFTBA tune was performed once a month per the TO-15 criteria and the HP operation manual masses were present.
Yes ___ No ____NA__X__
SIM analysis not requested or conducted.

V. INTERNAL STANDARDS
A. Area Limits
The Internal Standards met the TO-15 upper and lower limits criteria (+/- 40%) and the Retention times were within the required windows.
Yes __X__ No ____
The laboratory has not provided a summary tabulation of the internal standard areas and retention times. The raw data includes a summary for each sample, but these have to be found manually and reviewed. This requires a raw data review for each sample, so it has been done on a 10% basis. All internal standards reviewed met TO-15 criteria.

B. Retention Times
The relative retention times of the internal standards and sample compounds met the $\pm$ 0.06 RRT units limit.
Yes __X__ No____

See the comment above.

VI. SURROGATE
Surrogate spikes were analyzed with every sample.
Yes _____ No __X__
This is not required for Method TO-15.

And met the recovery limits defined in the current contract
Yes ___ No ____NA__X_____

VII. MATRIX SPIKE/MATRIX SPIKE DUPLICATE
A. Matrix spike (MS) and matrix spike duplicates (MSD) were analyzed for every analysis performed and for every 20 samples or for every matrix whichever is more frequent.
Yes____ No ____NA ___X__
Spikes are not amenable to canister analysis and are not required. Laboratory duplicates are required. These were present.

B. The MD relative percent differences (RPD) were within the defined contract limits.
Yes __X_ No ____NA _____

VIII. CONTROL SAMPLES
A. Control samples similar to Laboratory Control Samples (LCS) were performed for every set.
Yes __X__ No____

B. And percent recoveries were acceptable at 70 – 130%.
Yes _X__ No _____

C. And Relative Percent Differences were within lab limits.
Yes ____ No____ NA__X_
Duplicate control checks are not required by the method.

IX. SHIFT CHECKS
Shift checks were performed and were within time limits.
Yes _X___ No____
The BFB tune check is required every 24 hours in Method TO-15.

X. BLANKS
A. Method Blanks were analyzed at the required frequency and for each matrix and analysis.
Yes __X___ No____
This is a nitrogen blank run with each set.

B. The method blank was free of contamination.
Yes __X___ No _____

C. If Field Blanks were identified, they were free of contamination.
Yes ____ No __X__ NA _____
In SDG 10505017 there is one trip blank, consisting of a canister sent to the field and returned without any sample being collected. The trip blank is free of contamination.

In SDG 10505017 there is also an equipment blank. The equipment blank did contain detections of several target compounds. Because the validator does not know which samples are associated with this equipment blank, no qualifiers have been applied. However, users of the data should consider these results all of which are above the Reporting Limit.

Client ID	Lab ID	Analyte	result ug/m3	PRL
Equipment Blank	10505017007	Acetone	27.4	4.3
Equipment Blank	10505017007	Benzene	0.73	0.58
Equipment Blank	10505017007	Cyclohexane	7	3.2
Equipment Blank	10505017007	Ethanol	23.5	3.5
Equipment Blank	10505017007	n-Hexane	3.0	1.3
Equipment Blank	10505017007	Methylene Chloride	26.3	6.4
Equipment Blank	10505017007	Propylene	2	0.63
Equipment Blank	10505017007	Tetrachloroethene	3.8	1.2
Equipment Blank	10505017007	Toluene	2.5	1.4

D. Contamination level was less than 0.03 mg/cubic meter before samples were analyzed per the method.
Yes __X_ No____ NA _____
A representative set of canisters was screened for contamination at the laboratory for each SDG.

XI. FIELD QC
A. If Field duplicates or Performance Check Compounds were identified, they met the RPD or % recovery criteria for the project.
Yes ___ No __X__ NA____
The QAPP defines a 50% RPD requirement for field duplicates and for results < 5 x RL, a difference of 4 x RL There are 5 field duplicates blind to the laboratory, as shown in the table below.

Field Duplicate ID	Sample ID
DUP 120219-A	SV-5
DUP 120419-A	SV-10
DUP 120519	SV-20
DUP010920	SV-11
Dup011020	SV-23

There are several outliers that required qualifiers. These are shown in the table below. If either duplicate or sample is 5x RL or higher, the RPD is used for the qualifier if it exceeds 50%. If the result is < 5x RL, then if the absolute difference is >4 x RL, the result is qualified as JFD*#, where # is the difference. In cases where there is a non-detect in one sample but a detection in the other, the RL is used as the value in the non-detected sample for the purposes of calculating differences. As the RPD or difference increases, the precision decreases.

Client ID	Lab ID	Analyte	Result	Units	MDL	DSA	EPA

XII. SYSTEM PERFORMANCE
The RICs, chromatograms, tunes and general system performance were acceptable for all instruments and analytical systems .
Yes__X_ No ____ NA_____

XIII. TCL COMPOUNDS
A. The identification is accurate and all retention times, library spectra and reconstructed ion chromatograms (RIC) were evaluated for all detected compounds:
For this project, ten percent of the data are fully review for chromatograms and spectra.
Yes__X_ No ____ NA_____

B. Quantitation was checked to determine the accuracy of calculations for representative compounds in each internal standard set
Yes__X_ No ____ NA_____

XIV. TENTATIVELY IDENTIFIED COMPOUNDS (TIC)
TICs were properly identified and met the library identification criteria.
Yes____ No ____ NA__X__
Tentatively-identified compounds were not reported in this data set.

OVERALL ASSESSMENT
Data are considered to be usable for project purposes. Qualifiers are added for field precision and for a possible laboratory spike bias. Data are fully usable with consideration of the potential biases. A summary of key points follows.

Chain of Custody
SDGs 10504882 and 10505017 contained sample taken during January of 2020. The sampler filled out the COC incorrectly, showing January of 2019 in all cases. The relinquishment date is also shown as being in January of 2019, but the date received by the laboratory is shown as January of 2020. The laboratory has shown all collection dates as being in January of 2020 for these samples but has not made any comment about the change from the entered dates on the COC.

In one case (DUP010920 in SDG 10504882), the laboratory has failed to correct the collection date and it is shown as 1/9/2019 in the laboratory report and in the lab EDD. The actual sample date appears to have been 1/9/2020 for this sample, in accord with all the others in the set.

Although this is an obvious issue associated with human error at the start of a new year, the laboratory should provide a comment about the changes and their reason. In addition, the COC should be corrected, or an explanation provided by the sampler, for the project record. There are no qualifiers applied, but these samples could be challenged unless a correction/explanation is provided.

Normally, these types of issues are discussed in the Case Narrative. The laboratory, however, continues its practice of not providing such a narrative, and there are no comments about the problem in the sample receiving documents.

Canister Pressures
SDG 10501524: For sample SV-11 the initial field reading is recorded on the COC as -14 and a final field reading of -1, whereas the other samples in this SDG show an initial field reading near -30. On the sample receiving documents the sample receipt pressure reading is shown as -14 for that sample, whereas it is close

to the final field reading for the other samples. This suggests that the pressure gauge for the SV-11 canister may not have been reading correctly in the field.

Internal Standards

The laboratory has not provided a summary tabulation of the internal standard areas and retention times. The raw data includes a summary for each sample, but these have to be found manually and reviewed. This requires a raw data review for each sample, so we have done this review on a 10% basis. All internal standards reviewed met TO-15 criteria.

Field Duplicates

The QAPP defines a 50% RPD or 4 x RL difference for low level results requirement for field duplicates. There are 5 field duplicates blind to the laboratory, as shown in the table below.

Field Duplicate ID	Sample ID
DUP 120219-A	SV-5
DUP 120419-A	SV-10
DUP 120519	SV-20
DUP010920	SV-11
Dup011020	SV-23

There are several outliers that required qualifiers. These are shown in the table within this report. If either duplicate or sample is 5x RL or higher, the RPD is used for the qualifier if it exceeds 50%. If the result is < 5x RL, then if the absolute difference is >4 x RL, the result is qualified as JFD*#, where # is the difference. In cases where there is a non-detect in one sample but a detection in the other, the RL is used as the value in the non-detected sample for the purposes of calculating differences. As the RPD or difference increases, the precision decreases.

Field Blanks

In SDG 10505017 there is one trip blank, consisting of a canister sent to the field and returned without any sample being collected. The trip blank is free of contamination.

In SDG 10505017 there is also an equipment blank. The equipment blank did contain detections of several target compounds. Because the validator does not know which samples are associated with this equipment blank, no qualifiers have been applied. However, users of the data should consider these results, all of which are greater than the Reporting Limit.

Client ID	Lab ID	Analyte	result ug/m3	PRL
Equipment Blank	10505017007	Acetone	27.4	4.3
Equipment Blank	10505017007	Benzene	0.73	0.58
Equipment Blank	10505017007	Cyclohexane	7	3.2
Equipment Blank	10505017007	Ethanol	23.5	3.5
Equipment Blank	10505017007	n-Hexane	3.0	1.3
Equipment Blank	10505017007	Methylene Chloride	26.3	6.4
Equipment Blank	10505017007	Propylene	2	0.63
Equipment Blank	10505017007	Tetrachloroethene	3.8	1.2
Equipment Blank	10505017007	Toluene	2.5	1.4

Table of Qualifiers Added

Client ID	Lab ID	Analyte	Result	Units	MDL	DSA	EPA
SV-11	10504882019	Acetone	266	ug/m3	2.0	JFD63	J

DATA VALIDATION FORM FOR INORGANICS
METALS BY ICP and ICP/MS SW-846 METHODs 6010D and 6020B

SDGs: 10489386, 10489552, 10489715, 10494294, 10494421, 10496328, 10496688, 10496689, 10496869

PROJECT: Water Gremlin, MN; Project # 2606-0017 Water Gremlin, Wenck Environmental Consulting and Engineering

LABORATORY: Pace Analytical, Minneapolis, MN

SAMPLE MATRIX: Water and Solids

SAMPLING DATE: October, 2019

NO. OF SAMPLES: 88 Samples for lead, including 3 field duplicates, and 8 field blanks for lead

ANALYSES REQUESTED: SW-846 Method 6010D and 6020B - Lead only

SAMPLE NUMBERS: See Attached List

DATA REVIEWER: John Huntington

QA REVIEWER: Diane Short and Associates Inc. INITIALS/DATE: DLS 01/06/2020

Telephone Logs included Yes_____No__X__

Contractual Violations Yes_____No__X__

Comments:

I. DELIVERABLES

All deliverables were present as specified in the Statement of Work (SOW) or project contract.
Yes__X__No_____
The following are noted for clarification:
Data were submitted for the ICP and ICP/MS analyses by SW-846 Methods 6010D and 6020B for lead only. Data were submitted for the analyses of 88 Samples for lead, including 3 field duplicates, and 8 field blanks for lead. Hard copy data were not submitted, but the full package was provided as pdf. Results are incorporated into the associated EDD.

There are no Case Narratives provided for any of the data packages.

This is a validation review and includes review of the raw data. The data were validated with a minimum of 10% validated as EPA raw data review. All SDGs are Level IV.

II. CALIBRATION AND STANDARDIZATION – ICP/MS

A. Initial and Continuing Calibration

1. All initial instrument calibrations were performed as defined in the SOW or project contract. All correlation coefficients for the 3 point curves were > 0.995.

Yes__X__No_____

2. The initial calibration verification (ICV) and continuing calibration verification (CCV) standards were analyzed at the required frequency.

Yes__X__No_____

3. The ICV and CCV standard percent recovery results were within the required control limits of 90.0 – 110.0%.
Yes__X__No_____

B. ICP/MS Tune and Calibration

1. Mass calibration and resolution checks for both low and high mass isotopes are within 0.1 amu of the true value.

Yes__X__No_____

2. Mass calibration and resolution checks for both low and high mass isotopes produced a peak width of approximately 0.75 amu at 10% peak height.

Yes__X__No_____

3. Tuning solution was analyzed a minimum of three times, and the relative standard deviation (RSD) of absolute signals for all analytes was less than 5%.

Yes__X__No_____

C. Internal Standardization

1. A minimum of three internal standards were present in all standards and blanks at identical levels.

Yes__X__No_____
As applicable for lead by Method 6020B.

2. The intensity of each internal standard was within the required control limits of 60.0 – 130.0%.

Yes__X__No_____

III. CRDL STANDARDS

The 2 × CRDL standards were analyzed as required in the SOW.
Yes_____No_____N/A___X__

IV. BLANKS

The highest blank associated with any particular analyte is used for the qualification process and is the value entered after the "B" blank descriptor.

A. The initial calibration blanks (ICB) and continuing calibration blanks (CCB) were analyzed at the required frequency.

Yes__X__No_____N/A_____

B. The ICB and CCB results were within the required control limits.
Yes_____No__X__N/A_____
Calibration blanks were reviewed for all of the data. There are a few low-level detections reported in the CCBs. These detections were either not associated with samples, the samples were non-detects, or samples were > 10X the impacted CCB. No qualifiers are required.

C. All analytes in the Leach Blank were less than the RL or less than 2 × instrument detection limit (MDL), whichever is lower.

Yes_____No_____N/A___X__
Leach blanks were not applicable for these SDGs.

V. PREPARATION OR METHOD BLANKS

A. Preparation Blanks were prepared and analyzed at the required frequency.

Yes__X__No_____

B. All analytes in the Preparation Blank were less than the RL or less than the MDL, whichever is lower.
Yes__X__No_____
Detected results for lead were not reported in the method blanks.

C. Field, trip, decon rinse or other Field Blanks are contained and identified in the package.

Yes__X__No_____N/A_____
The following field blanks were identified in the data set.

SDG	FB
10494421	Rinsate Macro Core
10494421	Rinsate Temp Well
10496689	RINSATE SED. CORE
10496689	RINSATE BAILER
10496689	FIELD BLANK #1
10496869	Rinsate Core

10496869	Rinsate Builder
10496869	Field Blank #2

D. The reported results for the Field Blanks are less than the RL or less than the IDL, whichever is lower.
Yes__X__No_____N/A_____

VI. A. ICP INTERFERENCE CHECK SAMPLE

A. The Interference Check Sample (ICS) was analyzed as required in the SOW or project contract. The ICS consists of an A and an AB solution.
Yes__X__No_____N/A_____
The laboratory analyzed interference check samples in each run. As no other analytes are reported, any outlier data would not have been applicable.

B. The ICS percent recovery results were reported for all required ICS analytes and were within the required control limits of 80.0 – 120.0%.
Yes__X__No_____N/A_____

VI. B. INTERELEMENT CORRECTION FACTORS

The Interelement Correction Factors are included and complete for all possible interferent analytes.
Yes__X__No_____N/A_____
Interelement correction factors were provided for Method 6010D but are not applicable for 6020B (ICPMS).

VII. MATRIX SPIKE

A. A Matrix (pre-digestion) Spike sample was analyzed for each digestion group and/or matrix or as required in the SOW.
Yes__X__No_____
The samples used for MS/MSDs in this set are shown below.

SDG	Matrix	Method	MS/MSD Parent Sample
10494294	Water	EPA 6020B	SB-1
10494421	Solid	EPA 6010D	SB-7 (0-1)
10496328	Water	EPA 6020B	Downsport #1
10496689	Solid	EPA 6010D	SED-9
10496689	Water	EPA 6010D	SW-7
10496869	Solid	EPA 6010D	SED-22

B. The Matrix Spike percent recoveries were within the required control limits of 70.0 – 130.0%.
Yes_____No__X__N/A_____
All MS/MSD recoveries were within criteria or were associated with samples having results > 4x the spike levels, with the following exceptions. The sample is qualified as JMS# where # is the recovery observed. Data could be biased high proportional to the recovery.

Client ID	Lab ID	Analyte	Result	Units	MDL	DSA	EPA

SB-7 (0-1)	10494421002	Lead	63.7	mg/kg	0.12	JMS185	J+

C. A Post Digestion Spike was prepared and analyzed if required.
Yes__X__No_____N/A_____

D. The MS/MSD samples were client samples.
Yes__X__No_____

VIII. DUPLICATES

A. Matrix (pre-digestion) Duplicate samples were analyzed at the required frequency.
Yes__X__No_____
The laboratory prepares and analyzes MS/MSD samples.

B. The Matrix Duplicate (MD) relative percent differences (RPD) were within the required control limits (20% water, 35% soil) or the Reporting Limits (RL) were met if the duplicate values are less than 5 × RL (RL Rule). If either of the duplicate results is less than 5 × RL, the RPD is not used. The QC limit (± RL for water samples, 2 x RL soil) used is the difference between the original and the duplicate results.
Yes__X__No_____
All MS/MSD RPD values were acceptable.

IX. LABORATORY CONTROL SAMPLE

A. Laboratory Control Samples (LCS) were analyzed at the required frequency.
Yes__X__No_____

B. The LCS recoveries were within the required control limits of 75.0 – 125.0%.
Yes__X__No_____
All LCS recoveries were within criteria.

X. SERIAL DILUTION

A. Serial Dilutions were analyzed at the required frequency if the analyte concentrations were greater than 50 × IDL.
Yes__X__No_____N/A_____

B. The percent difference (% D) criteria of ± 10.0% were met.
Yes_____No__X__N/A_____
All serial dilutions provided for samples in these SDGs were within control, with exceptions. Outliers are qualified only where the result is > 50x the IDL, and although the serial dilution for SW-9 was out of limits the sample result is < 50x IDL. Only one result is qualified, as shown below. Data are qualified JE#, where # is the %D. The bias is usually high, but the QC sample indicates non-linear matrix or chemical effects and the bias is not determined.

Client ID	Lab ID	Analyte	Result	Units	MDL	DSA	EPA
SB-1 (0.5-1.5)	10494294001	Lead	302	mg/kg	0.084	JE11	J

XI. INSTRUMENT DETECTION LIMITS

A. The Instrument Detection Limits (IDL) met the Quarterly reporting requirements.

Yes__X__No_____N/A_____

This was determined to be acceptable during the contractual process. However, it should be noted that the laboratory has used method 6010D (ICP) for some samples and ICPMS (6020B) for some samples. The reporting limit for ICPMS is lower than for ICP. In addition, the laboratory has run field blanks by both methods but only reported one in the EDDs. In some cases, analytes are not detected in field blanks by ICP but are by ICPMS. However, the results are low enough in such cases that they do not impact the sample results.

In SDGs 10496328, 10496688, lead is reported by both 6020B and 6010D for samples. A review of the data indicates detected results for the soil data show acceptable precision of 35% RPD or less. The water data for the 6010 data compared to 6020 results indicates that all reported non-detected 6010 results had a valid result reported using 6020. Depending on the use of the data for project decisions, the 6020 data are most accurate. As noted above, the associated field and method blanks should be run by the same method.

B. All sample results met the required detection limits (RL).

Yes__X__No_____N/A_____

XII. PREPARATION AND ANALYSIS LOGS

A. All samples were prepared or analyzed within the required holding times referenced in the SOW (time of sample receipt to preparation/distillation).

Yes__X__No_____

B. All samples were analyzed within the 40 CFR 136 (Clean Water Act) or method recommended holding times (time of sample collection to date of analysis).

Yes__X__No_____

All holding times were met for the lead analyses.

C. Chain of Custody (COC)

1. Chain of Custody (COC) forms were reviewed and all fields were complete, signatures were present and cross outs were clean and initialed.

Yes__X__No_____

Note that field duplicate samples do not include times in order to maintain their “blind” status to the laboratory. Dates and times should be recorded in the project field notebooks.

2. Samples were received at the required temperature and preservation.

Yes_____No__X__

Cooler temperatures were within acceptance limits. For soil samples there is no additional preservation required for lead. For water samples, in most cases the Sample Receipt checklists indicate that samples were either within pH limits or were brought to those limits at the lab. There is no information regarding the pH of water samples received for lead in SDGs 10494294, 10494421, and 10496328. For SDG 10496328 the COC lists the samples as unpreserved, and for 10494294 and 10494421 there is no indication of metals preservation being used for any of the samples. The validator could not find any data on preservation of the samples used for lead anywhere in the data packages. There appears to have

been some non-standard work done on these samples but since there is no Case Narrative or any other notes about this, there is no information available to allow evaluation of these lead results. The project manager is apprised of possible authentication data that are required to complete the project record.

XIII. FIELD QC

A. Field QC samples (duplicates, SRMs) were identified.

Yes__X__No_____
The client has identified field duplicate sets as shown in the table below:

Sample ID	Field Duplicate ID	Methods
SW-17	DUP-2	EPA 6010D
SW-8	DUP 102319	EPA 6010D
SB-4	DUP 100419-A	EPA 6020B
SB-5 (0-1)	DUP100419-B	EPA 6020B

B. Field duplicates were within the QAPP limit of < 50% RPD for all samples. If values are less than 5 × RL, the water limit is ± RL.

Yes_____No__X__N/A_____
There are outliers requiring qualification as shown in the table below. If the RPD is >50%, the qualifier added is JFD#, where # is the RPD observed. As the RPD increases, the precision decreases. In cases where one analyte is ND but the other is >5x RL, the RPD has been used rather than the absolute difference. The value for the non-detected analyte has been chosen as the RL because results appear only to be reported to the RL. These outliers probably reflect sample non-homogeneity, which is a fairly common problem for lead.

CLIENT ID	LAB ID	ANALYTE	RESULT	UNITS	MDL	DSA	EPA
DUP100419-B	10494294017	Lead	5800.0	mg/kg	0.91	JFD103	J
SB-5 (0-1)	10494294015	Lead	1860	mg/kg	0.86	JFD103	J
DUP-2	10496869012	Lead	293	ug/L	2.0	JFD53	J
SW-17	10496869005	Lead	170	ug/L	2.0	JFD53	J
DUP 102319	10496689008	Lead	45.2	ug/L	2.0	JFD59	J
SW-8	10496689007	Lead	82.9	ug/L	2.0	JFD59	J
DUP 100419-A	10494294013	Lead, Dissolved	ND	ug/L	0.046	JFD70	J
SB-4	10494294012	Lead, Dissolved	0.57	ug/L	0.046	JFD70	J

XIV. OVERALL ASSESSMENT OF THE CASE

The laboratory has complied with the requested method. Data are fully usable with consideration of the qualifiers that have been applied.

Deliverables
The following are noted for clarification:
Data were submitted for the ICP and ICP/MS analyses by SW-846 Methods 6010D and 6020B for lead only. Data were submitted for the analyses of 88 Samples for lead, including 3 field duplicates, and 8

field blanks for lead. Hard copy data were not submitted, but the full package was provided as pdf. Results are incorporated into the associated EDD.

There are no Case Narratives provided for any of the data packages.

This is a validation review and includes review of the raw data. The data were validated with a minimum of 10% validated as EPA raw data review. All SDGs are Level IV.

Chain of Custody and Sample Preservation

Note that field duplicate samples do not include times in order to maintain their "blind" status to the laboratory. Dates and times should be recorded in the project field notebooks.

Cooler temperatures were within acceptance limits. For soil samples there is no additional preservation required for lead. For water samples, in most cases the Sample Receipt checklists indicate that samples were either within pH limits or were brought to those limits at the lab. There is no information regarding the pH of water samples received for lead in SDGs 10494294, 10494421, and 10496328. For SDG 10496328 the COC lists the samples as unpreserved, and for 10494294 and 10494421 there is no indication of metals preservation being used for any of the samples. The validator could not find any data on preservation of the samples used for lead anywhere in the data packages. There appears to have been some non-standard work done on these samples but since there is no Case Narrative or any other notes about this, there is no information available to allow evaluation of these lead results. The project manager is apprised of possible authentication data that are required to complete the project record.

Field Blanks

The following field blanks were identified in the data set.

SDG	FB
10494421	Rinsate Macro Core
10494421	Rinsate Temp Well
10496689	RINSATE SED. CORE
10496689	RINSATE BAILER
10496689	FIELD BLANK #1
10496869	Rinsate Core
10496869	Rinsate Builder
10496869	Field Blank #2

Lead was not detected in field blanks for the methods used in reporting. No qualifiers are applied.

Detection Limits

This was determined to be acceptable during the contractual process. However, it should be noted that the laboratory has used method 6010D (ICP) for some samples and ICPMS (6020B) for some samples. The reporting limit for ICPMS is lower than for ICP. In addition, the laboratory has run field blanks by both methods but only reported one in the EDDs. In some cases, analytes are not detected in field blanks by ICP but are by ICPMS. However, the results are low enough in such cases that they do not impact the sample results.

Two SDGs submitted 6010 and 6020 results for the same samples. A review of the data indicates detected results for the soil data show acceptable precision of 35% RPD or less. The water data for the 6010 data compared to 6020 results indicates that all reported non-detected 6010 results had a valid result

reported using 6020. Depending on the use of the data for project decisions, the 6020 data are most accurate. As noted above, the associated field and method blanks should be run by the same method.

Matrix Spikes and Matrix Duplicates

The samples used for MS/MSDs in this set are shown below.

SDG	Matrix	Method	MS/MSD Parent Sample
10494294	Water	EPA 6020B	SB-1
10494421	Solid	EPA 6010D	SB-7 (0-1)
10496328	Water	EPA 6020B	Downsport #1
10496689	Solid	EPA 6010D	SED-9
10496689	Water	EPA 6010D	SW-7
10496869	Solid	EPA 6010D	SED-22

All MS/MSD recoveries were within criteria or were associated with samples having results > 4x the spike levels but for one elevated recovery in sample SB-7 (0-1) which required qualification as shown in the body of this report.

All MS/MSD RPD values were acceptable.

Serial Dilution

All serial dilutions provided for samples in these SDGs were within control, with exceptions. Outliers are qualified only where the result is > 50x the IDL, and although the serial dilution for SW-9 was out of limits the sample result is < 50x IDL. Only one result is qualified, as shown below. Data are qualified JE#, where # is the %D. the bias is usually high, but the QC sample indicates non-linear matrix or chemical effects and the bias is not determined.

Field Duplicates

The client has identified field duplicate sets as shown in the table below:

Sample ID	Field Duplicate ID	Methods
SW-17	DUP-2	EPA 6010D
SW-8	DUP 102319	EPA 6010D
SB-4	DUP 100419-A	EPA 6020B
SB-5 (0-1)	DUP100419-B	EPA 6020B

There are outliers requiring qualification. If the RPD is >50%, the qualifier added is JFD#, where # is the RPD observed. As the RPD increases, the precision decreases. In cases where one analyte is ND but the other is >5x RL, the RPD has been used rather than the absolute difference. The value for the non-detected analyte has been chosen as the RL because results appear only to be reported to the RL. These outliers probably reflect sample non-homogeneity, which is a fairly common problem for lead.

SUMMARY TABLE OF QUALIFIED DATA

CLIENT ID	LAB ID	ANALYTE	RESULT	UNITS	MDL	DSA	EPA

DATA VALIDATION FORM FOR INORGANICS
METALS BY ICP and ICP/MS SW-846 METHODs 6010D

SDGs: 105: 01795, 02228, 02608, 01950, 02086, 02407

PROJECT: Water Gremlin, MN; Project # 2606-0017 Water Gremlin, Wenck Environmental Consulting and Engineering

LABORATORY: Pace Analytical, Minneapolis, MN

SAMPLE MATRIX: Solids

SAMPLING DATE: December, 2019

NO. OF SAMPLES: 9 solid Samples for lead

ANALYSES REQUESTED: SW-846 Method 6010D - Lead only

SAMPLE NUMBERS: See Attached List

DATA REVIEWER: John Huntington

QA REVIEWER: Diane Short and Associates Inc. INITIALS/DATE: DLS 2/14/2020

Telephone Logs included Yes_____No__X__

Contractual Violations Yes_____No__X__

Comments:

I. DELIVERABLES

All deliverables were present as specified in the Statement of Work (SOW) or project contract.
Yes__X__No_____
The following are noted for clarification:
Data were submitted for the ICP analyses by SW-846 Method 6010D for lead only. Data were submitted for the analyses of 9 solid samples for lead. Hard copy data were not submitted, but the full package was provided as pdf. Results are incorporated into the associated EDD.

There are no Case Narratives provided for any of the data packages.

This is a validation review and includes review of the raw data. The data were validated with a minimum of 10% validated as EPA raw data review. All SDGs are Level IV.

II. CALIBRATION AND STANDARDIZATION – ICP AND ICP/MS

A. Initial and Continuing Calibration

1. All initial instrument calibrations were performed as defined in the SOW or project contract. All correlation coefficients for the 3-point curves were > 0.995.

Yes__X__No_____
The laboratory has used one calibration point and a blank as the initial calibration. This is acceptable as long as other criteria are met per method.

2. The initial calibration verification (ICV) and continuing calibration verification (CCV) standards were analyzed at the required frequency.

Yes__X__No_____

3. The ICV and CCV standard percent recovery results were within the required control limits of 90.0 – 110.0%.
Yes__X__No_____

B. ICP/MS Tune and Calibration

1. Mass calibration and resolution checks for both low and high mass isotopes are within 0.1 amu of the true value.

Yes_____No_____N/A___X__
No ICPMS data.

2. Mass calibration and resolution checks for both low and high mass isotopes produced a peak width of approximately 0.75 amu at 10% peak height.

Yes_____No_____N/A___X__
No ICPMS data.

3. Tuning solution was analyzed a minimum of three times, and the relative standard deviation (RSD) of absolute signals for all analytes was less than 5%.

Yes_____No_____N/A___X__
No ICPMS data.

C. Internal Standardization

1. A minimum of three internal standards were present in all standards and blanks at identical levels (not a requirement for ICP data).

Yes__X__No_____
As applicable for lead by Method 6010D, the laboratory uses yttrium as the internal standard.

2. The intensity of each internal standard was within the required control limits of 60.0 – 130.0%.

Yes__X__No_____
Although not required by the method, the laboratory tracks the recovery of the yttrium internal standard. All recoveries are near 100%.

III. CRDL STANDARDS

The 2 × CRDL standards were analyzed as required in the SOW.
Yes__X__No_____N/A___
CRDL recoveries are within acceptance windows in all cases.

IV. BLANKS

The highest blank associated with any particular analyte is used for the qualification process and is the value entered after the "B" blank descriptor.
A. The initial calibration blanks (ICB) and continuing calibration blanks (CCB) were analyzed at the required frequency.

Yes__X__No_____N/A_____

B. The ICB and CCB results were within the required control limits.
Yes__X__No_____N/A_____
Calibration blanks were reviewed for all of the data.

C. All analytes in the Leach Blank were less than the RL or less than 2 × instrument detection limit (MDL), whichever is lower.

Yes_____No_____N/A___X__
Leach blanks were not applicable for these SDGs.

V. PREPARATION OR METHOD BLANKS

A. Preparation Blanks were prepared and analyzed at the required frequency.

Yes__X__No_____

B. All analytes in the Preparation Blank were less than the RL or less than the MDL, whichever is lower.
Yes__X__No_____
Detected results for lead were not reported in the method blanks.

C. Field, trip, decon rinse or other Field Blanks are contained and identified in the package.

Yes_____No__X__N/A_____
There are no field blanks associated with the lead analyses in this set of data.

D. The reported results for the Field Blanks are less than the RL or less than the IDL, whichever is lower.
Yes_____No_____N/A___X__

VI. A. ICP INTERFERENCE CHECK SAMPLE

A. The Interference Check Sample (ICS) was analyzed as required in the SOW or project contract. The ICS consists of an A and an AB solution.
Yes__X__No_____N/A_____
The laboratory analyzed interference check samples in each run.

B. The ICS percent recovery results were reported for all required ICS analytes and were within the required control limits of 80.0 – 120.0%.
Yes__X__No_____N/A_____

VI. B. INTERELEMENT CORRECTION FACTORS

The Interelement Correction Factors are included and complete for all possible interferent analytes.
Yes__X__No_____N/A_____
Interelement correction factors were provided for Method 6010D but are not applicable for 6020B (ICPMS).

VII. MATRIX SPIKE

A. A Matrix (pre-digestion) Spike sample was analyzed for each digestion group and/or matrix or as required in the SOW.

Yes__X__No_____
The samples used for MS/MSDs in this set are shown below.

SDG	Matrix	MS/MSD Parent Sample
10502086	Solid	GP-29 (0-1)
10502407	Solid	GP-31 (0-1)
10502608	Solid	GP-33 (0-1)

B. The Matrix Spike percent recoveries were within the required control limits of 70.0 – 130.0%.
Yes_____No__X__N/A_____
There were outliers that required qualification as shown in the table below. Results for recovery outliers are qualified as JMS#, where # is the recovery observed. Data could be biased low or high in proportion to the spike recovery.

Client ID	Lab ID	Analyte	Result	Units	MDL	DSA	EPA
GP-31 (0-1)	10502407001	Lead	164	mg/kg	0.69	JMS202MD63	J+
GP-33 (0-1)	10502608001	Lead	81	mg/kg	0.12	JMS55	J-

C. A Post Digestion Spike was prepared and analyzed if required.

Yes__X__No_____N/A_____
The PDS run after each failed MS/MSD was in control. This indicates that the cause of the recovery outliers is associated with the preparation of the sample and its spikes, not instrumentation issues.

D. The MS/MSD samples were client samples.

Yes__X__No_____

VIII. DUPLICATES

A. Matrix (pre-digestion) Duplicate samples were analyzed at the required frequency.

Yes__X__No_____
The laboratory prepares and analyzes MS/MSD samples.

B. The Matrix Duplicate (MD) relative percent differences (RPD) were within the required control limits (20% water, 35% soil) or the Reporting Limits (RL) were met if the duplicate values are less than 5 × RL (RL Rule). If either of the duplicate results is less than 5 × RL, the RPD is not used. The QC limit (± RL for water samples, 2 x RL soil) used is the difference between the original and the duplicate results.

Yes_____No__X__
One sample had a MS/MSD RPD of 63% which is outside of limits. This probably reflects sample homogeneity issues for lead. As the RPD increases, the precision decreses.

Client ID	Lab ID	Analyte	Result	Units	MDL	DSA	EPA
GP-31 (0-1)	10502407001	Lead	164	mg/kg	0.69	JMS202MD63	J+

IX. LABORATORY CONTROL SAMPLE

A. Laboratory Control Samples (LCS) were analyzed at the required frequency.
Yes__X__No_____

B. The LCS recoveries were within the required control limits of 75.0 – 125.0%.
Yes__X__No_____
All LCS recoveries were within criteria.

X. SERIAL DILUTION

A. Serial Dilutions were analyzed at the required frequency if the analyte concentrations were greater than 50 × IDL.

Yes__X__No_____N/A_____
The same samples were used for serial dilutions that were used for matrix spikes.

B. The percent difference (% D) criteria of ± 10.0% were met.
Yes__X__No_____N/A_____
All serial dilutions provided for samples in these SDGs were within control. Outliers are qualified only where the result is > 50x the IDL. Data are qualified JE# where # is the %D.

XI. INSTRUMENT DETECTION LIMITS

A. The Instrument Detection Limits (IDL) met the Quarterly reporting requirements.

Yes__X__No_____N/A_____

B. All sample results met the required detection limits (RL).
Yes__X__No_____N/A_____

XII. PREPARATION AND ANALYSIS LOGS

A. All samples were prepared or analyzed within the required holding times referenced in the SOW (time of sample receipt to preparation/distillation).

Yes__X__No_____

B. All samples were analyzed within the 40 CFR 136 (Clean Water Act) or method recommended holding times (time of sample collection to date of analysis).

Yes__X__No_____
All holding times were met for the lead analyses.

C. Chain of Custody (COC)

1. Chain of Custody (COC) forms were reviewed and all fields were complete, signatures were present and cross outs were clean and initialed.

Yes__X__No_____

2. Samples were received at the required temperature and preservation.

Yes__X__No_____
Cooler temperatures were within acceptance limits. For soil samples there is no additional preservation required for lead.

XIII. FIELD QC

A. Field QC samples (duplicates, SRMs) were identified.

Yes_____No__X__
The client has not identified field duplicate sets for lead.

B. Field duplicates were within the QAPP limit of < 50% RPD for soil and <35% RPD for water samples. If values are less than 5 × RL, the water limit is 2 x ± RL and ± 4 x RL for soils.

Yes_____No_____N/A___X__

XIV. OVERALL ASSESSMENT OF THE CASE

The laboratory has complied with the requested method. Data are fully usable with consideration of the qualifiers that have been applied.

Deliverables
The following are noted for clarification:
Data were submitted for the ICP analyses by SW-846 Method 6010D for lead only. Data were submitted for the analyses of 9 solid samples for lead. Hard copy data were not submitted, but the full package was provided as pdf. Results are incorporated into the associated EDD.
There are no Case Narratives provided for any of the data packages.

This is a validation review and includes review of the raw data. The data were validated with a minimum of 10% validated as EPA raw data review. All SDGs are Level IV.

Matrix Spikes and Matrix Duplicates
There were outliers that required qualification as shown in the table below. Results for recovery outliers are qualified as JMS#, where # is the recovery observed. Data could be biased low or high in proportion to the spike recovery. One sample had a MS/MSD RPD of 63% which is outside of limits. This probably reflect As the RPD increases, the precision decreases.

Client ID	Lab ID	Analyte	Result	Units	MDL	DSA	EPA
GP-31 (0-1)	10502407001	Lead	164	mg/kg	0.69	JMS202MD63	J+
GP-33 (0-1)	10502608001	Lead	81	mg/kg	0.12	JMS55	J-

Post Digestion Spikes

The PDS run after each failed MS/MSD was in control. This indicates that the cause of the recovery outliers is associated with the preparation of the sample and its spikes, not instrumentation issues.

SUMMARY TABLE OF QUALIFIED DATA

CLIENT ID	LAB ID	ANALYTE	RESULT	UNITS	MDL	DSA	EPA

I. DELIVERABLES

All deliverables were present as specified in the Statement of Work (SOW) or project contract.
Yes__X__No_____
The following are noted for clarification:
Data were submitted for the ICP analyses by SW-846 Method 6010D for lead only. Data were submitted for the analyses of 15 solid samples for lead, including 1 field duplicate. Hard copy data were not submitted, but the full package was provided as pdf. Results are incorporated into the associated EDD.

There are no Case Narratives provided for any of the data packages.

This is a validation review and includes review of the raw data. The data were validated with a minimum of 10% validated as EPA raw data review. All SDGs are Level IV.

II. CALIBRATION AND STANDARDIZATION – ICP AND ICP/MS

A. Initial and Continuing Calibration

1. All initial instrument calibrations were performed as defined in the SOW or project contract. All correlation coefficients for the 3-point curves were > 0.995.

Yes__X__No_____
The laboratory has used one calibration point and a blank as the initial calibration. This is acceptable as long as other criteria are met per method.

2. The initial calibration verification (ICV) and continuing calibration verification (CCV) standards were analyzed at the required frequency.

Yes__X__No_____

3. The ICV and CCV standard percent recovery results were within the required control limits of 90.0 – 110.0%.
Yes__X__No_____

B. ICP/MS Tune and Calibration

1. Mass calibration and resolution checks for both low and high mass isotopes are within 0.1 amu of the true value.

Yes_____No_____N/A___X__
No ICPMS data.

2. Mass calibration and resolution checks for both low and high mass isotopes produced a peak width of approximately 0.75 amu at 10% peak height.

Yes_____No_____N/A___X__
No ICPMS data.

3. Tuning solution was analyzed a minimum of three times, and the relative standard deviation (RSD) of absolute signals for all analytes was less than 5%.

Yes_____No_____N/A___X__
No ICPMS data.

C. Internal Standardization

1. A minimum of three internal standards were present in all standards and blanks at identical levels (not a requirement for ICP data).

Yes__X__No_____
As applicable for lead by Method 6010D, the laboratory uses yttrium as the internal standard.

2. The intensity of each internal standard was within the required control limits of 60.0 – 130.0%.

Yes__X__No_____
Although not required by the method, the laboratory tracks the recovery of the yttrium internal standard. All recoveries are near 100%.

III. CRDL STANDARDS

The 2 × CRDL standards were analyzed as required in the SOW.
Yes__X__No_____N/A___
CRDL recoveries are within acceptance windows in all cases.

IV. BLANKS

The highest blank associated with any particular analyte is used for the qualification process and is the value entered after the "B" blank descriptor.
A. The initial calibration blanks (ICB) and continuing calibration blanks (CCB) were analyzed at the required frequency.

Yes__X__No_____N/A_____

B. The ICB and CCB results were within the required control limits.
Yes__X__No_____N/A_____
Calibration blanks were reviewed for all of the data.

C. All analytes in the Leach Blank were less than the RL or less than 2 × instrument detection limit (MDL), whichever is lower.

Yes_____No_____N/A___X__
Leach blanks were not applicable for these SDGs.

V. PREPARATION OR METHOD BLANKS

A. Preparation Blanks were prepared and analyzed at the required frequency.

Yes__X__No_____

B. All analytes in the Preparation Blank were less than the RL or less than the MDL, whichever is lower.
Yes__X__No_____
Detected results for lead were not reported in the method blanks.

C. Field, trip, decon rinse or other Field Blanks are contained and identified in the package.

Yes_____No__X__N/A_____
There are no field blanks associated with the lead analyses in this set of data.

D. The reported results for the Field Blanks are less than the RL or less than the IDL, whichever is lower.
Yes_____No_____N/A___X__

VI. A. ICP INTERFERENCE CHECK SAMPLE

A. The Interference Check Sample (ICS) was analyzed as required in the SOW or project contract. The ICS consists of an A and an AB solution.
Yes__X__No_____N/A_____
The laboratory analyzed interference check samples in each run.

B. The ICS percent recovery results were reported for all required ICS analytes and were within the required control limits of 80.0 – 120.0%.
Yes__X__No_____N/A_____

VI. B. INTERELEMENT CORRECTION FACTORS

The Interelement Correction Factors are included and complete for all possible interferent analytes.
Yes__X__No_____N/A_____
Interelement correction factors were provided for Method 6010D but are not applicable for 6020B (ICPMS).

VII. MATRIX SPIKE

A. A Matrix (pre-digestion) Spike sample was analyzed for each digestion group and/or matrix or as required in the SOW.

Yes__X__No_____
The samples used for MS/MSDs in this set are shown below.

SDG	Matrix	MS/MSD Parent Sample
10501264	Solid	SB-8 (0-1)
10501264	Solid	GP-24 (5-7.5)

B. The Matrix Spike percent recoveries were within the required control limits of 70.0 – 130.0%.
Yes__X__No_____N/A_____
All MS/MSD recoveries were within criteria or were associated with samples having results > 4x the spike levels.

C. A Post Digestion Spike was prepared and analyzed if required.

Yes_____No_____N/A___X__
Not required, since all MS/MSD recoveries are in control.

D. The MS/MSD samples were client samples.

Yes__X__No_____

VIII. DUPLICATES

A. Matrix (pre-digestion) Duplicate samples were analyzed at the required frequency.

Yes__X__No_____
The laboratory prepares and analyzes MS/MSD samples.

B. The Matrix Duplicate (MD) relative percent differences (RPD) were within the required control limits (20% water, 35% soil) or the Reporting Limits (RL) were met if the duplicate values are less than 5 × RL (RL Rule). If either of the duplicate results is less than 5 × RL, the RPD is not used. The QC

limit (± RL for water samples, 2 x RL soil) used is the difference between the original and the duplicate results.
Yes__X__No_____
All MS/MSD RPD values were acceptable.

IX. LABORATORY CONTROL SAMPLE

A. Laboratory Control Samples (LCS) were analyzed at the required frequency.
Yes__X__No_____

B. The LCS recoveries were within the required control limits of 75.0 – 125.0%.
Yes__X__No_____
All LCS recoveries were within criteria.

X. SERIAL DILUTION

A. Serial Dilutions were analyzed at the required frequency if the analyte concentrations were greater than 50 × IDL.

Yes__X__No_____N/A_____
Sample SB-8 (0-1) and sample GP-24 (5-7.5) were used for serial dilutions.

B. The percent difference (% D) criteria of ± 10.0% were met.
Yes_____No__X__N/A_____
All serial dilutions provided for samples in these SDGs were within control, with one exception. Outliers are qualified only where the result is > 50x the IDL. Data are qualified JE# where # is the %D. No bias can be determined as this qualifier indicates non-linear chemical or matrix effects. The bias is noted, however, as often being high.

Client ID	Lab ID	Analyte	Result	Units	MDL	DSA	EPA
SB-8 (0-1)	10501264001	Lead	103	mg/kg	0.12	JE19	J

XI. INSTRUMENT DETECTION LIMITS

A. The Instrument Detection Limits (IDL) met the Quarterly reporting requirements.

Yes__X__No_____N/A_____

B. All sample results met the required detection limits (RL).
Yes__X__No_____N/A_____

XII. PREPARATION AND ANALYSIS LOGS

A. All samples were prepared or analyzed within the required holding times referenced in the SOW (time of sample receipt to preparation/distillation).

Yes__X__No_____

B. All samples were analyzed within the 40 CFR 136 (Clean Water Act) or method recommended holding times (time of sample collection to date of analysis).

Yes__X__No_____

All holding times were met for the lead analyses.

C. Chain of Custody (COC)

1. Chain of Custody (COC) forms were reviewed and all fields were complete, signatures were present and cross outs were clean and initialed.

Yes__X__No_____
In the case of SDG 15001393 there is a 6-minute difference between the relinquishment and lab received time. Such small differences reflect the difference in time required to physically turn over the samples at the lab and the difference is not significant. However, a note should be placed in the project record confirming that this is the reason for the difference.

Note that field duplicate samples do not include times in order to maintain their "blind" status to the laboratory. Dates and times should be recorded in the project field notebooks.

2. Samples were received at the required temperature and preservation.

Yes_____No__X__
Cooler temperatures were within acceptance limits. For soil samples there is no additional preservation required for lead.

XIII. FIELD QC

A. Field QC samples (duplicates, SRMs) were identified.

Yes__X__No_____
The client has identified field duplicate sets as shown in the table below:

Sample ID	Field Duplicate ID	Methods
GP-28 0-1	DUP 120619-A	6010D

B. Field duplicates were within the QAPP limit of < 50% RPD for soil and <35% RPD for water samples. If values are less than 5 × RL, the water limit is 2 x ± RL and ± 4 x RL for soils.

Yes_____No__X__N/A_____
There are outliers requiring qualification as shown in the table below. If the RPD is >50%, the qualifier added is JFD#, where # is the RPD observed. As the RPD increases, the precision decreases.

CLIENT ID	LAB ID	ANALYTE	RESULT	UNITS	MDL	DSA	EPA
GP-28 0-1	10501793001	Lead	13	mg/kg	0.12	JFD69	J
DUP 120619-A	10501793012	Lead	26	mg/kg	0.12	JFD69	J

XIV. OVERALL ASSESSMENT OF THE CASE

The laboratory has complied with the requested method. Data are fully usable with consideration of the qualifiers that have been applied.

Deliverables
The following are noted for clarification:
Data were submitted for the ICP analyses by SW-846 Method 6010D for lead only. Data were submitted for the analyses of 15 solid samples for lead, including 1 field duplicate. Hard copy data were not submitted, but the full package was provided as pdf. Results are incorporated into the associated EDD.

There are no Case Narratives provided for any of the data packages.

This is a validation review and includes review of the raw data. The data were validated with a minimum of 10% validated as EPA raw data review. All SDGs are Level IV.

Chain of Custody and Sample Preservation

In the case of SDG 15001393 there is a 6-minute difference between the relinquishment and lab received time. Such small differences reflect the difference in time required to physically turn over the samples at the lab and the difference is not significant. However, a note should be placed in the project record confirming that this is the reason for the difference.

Note that field duplicate samples do not include times in order to maintain their "blind" status to the laboratory. Dates and times should be recorded in the project field notebooks.

Matrix Spikes and Matrix Duplicates

The samples used for MS/MSDs in this set are shown below.

SDG	Matrix	MS/MSD Parent Sample
10501264	Solid	SB-8 (0-1)
10501264	Solid	GP-24 (5-7.5)

All MS/MSD recoveries and RPDs are in control.

Serial Dilution

Sample SB-8 (0-1) and sample GP-24 (5-7.5) were used for serial dilutions.
Data are qualified JE# where # is the %D. No bias can be determined as this qualifier indicates non-linear chemical or matrix effects. The bias is noted, however, as often being high.

Field Duplicates

The client has identified field duplicate sets as shown in the table below:

Sample ID	Field Duplicate ID	Methods
GP-28 0-1	DUP 120619-A	6010D

The field duplicate is out of limits with an RPD of 69%. Lead is qualified as JFD69 in both the sample and the field duplicate. The qualifier added is JFD#, where # is the RPD observed. As the RPD increases, the precision decreases.

SUMMARY TABLE OF QUALIFIED DATA

CLIENT ID	LAB ID	ANALYTE	RESULT	UNITS	MDL	DSA	EPA
SB-8 (0-1)	10501264001	Lead	103	mg/kg	0.12	JE19	J
GP-28 0-1	10501793001	Lead	13	mg/kg	0.12	JFD69	J
DUP 120619-A	10501793012	Lead	26	mg/kg	0.12	JFD69	J

DATA VALIDATION FORM FOR ORGANICS

SDGs: 105: 01795, 02228, 02608, 01950, 02086, 02407

PROJECT: Water Gremlin, MN; Project # 2606-0017 Water Gremlin, Wenck Environmental Consulting and Engineering

LABORATORY: Pace Analytical, Minneapolis, MN

SAMPLE MATRIX: Water and Solid

SAMPLING DATE: December 2019

NO. OF SAMPLES: 14 solid and 42 aqueous samples for 8260B which includes 1 aqueous field duplicate, 4 solids trip blanks, 5 water rinsate blanks, and 1 water trip blank; 41 aqueous samples for 8270D-SIM (1,4-dioxane) including 1 aqueous field duplicate and 5 aqueous rinsate blanks.

ANALYSES REQUESTED: SW-846 Method 8260B, 8270D-SIM

SAMPLE NUMBERS: See Attached List

DATA REVIEWER: John Huntington

QA REVIEWER: Diane Short and Associates Inc. INITIALS/DATE: DLS 2/14/2020

Telephone Logs included Yes_____No__X__

Contractual Violations Yes_____No__X__

Comments:

I. **DELIVERABLES**

All deliverables were present as specified in the QAPP.

Yes__X__No_____

The following are noted for clarification:

This is a validation review for 10 project-specific compounds by SW-846 Method 8260B and 1 compound (1,4-dioxane) by method 8270D-SIM. Data were provided for 14 solid and 42 aqueous samples for 8260B which includes 1 aqueous field duplicate, 4 solids trip blanks, 5 water rinsate blanks, and 1 water trip blank; 41 aqueous samples for 8270D-SIM (1,4-dioxane) including 1 aqueous field duplicate and 5 aqueous rinsate blanks. Hard copy data were not submitted, but the full packages were provided as pdf. Results are incorporated into the associated EDDs. The laboratory reports a full list of volatiles targets but only the client-specified 10 compounds are reviewed.

None of the project reports include a Case Narrative. In addition, the laboratory "qualifier flags" that reflect calibration or other QC issues are not incorporated into the EDDs. This information is lost in the electronic deliverables and must be obtained from the pdf reports. The DSA qualifiers, however, have a code for each type of outlier (MS/MSD, LCS, MB) etc), the value of the outlier (%R, RPD or result). These are part of the validation deliverable in the tables and the EDD.

This is a validation review and includes review of the raw data. The data were validated with a minimum of 10% validated as EPA raw data review. All SDGs are Level IV.

II. **ANALYTICAL REPORT FORMS**

A. The Analytical Report or Data Sheets are present and complete for all requested analyses.

Yes__X__No_____

B. Holding Times

The required holding times were met for all analyses (time of sample receipt to time of analysis- VOA).

Yes__X__No_____

For Method 8260B: All soil and water samples were analyzed within 14 days from the sample collection date. Soil samples were preserved in methanol. Holding times are specified as 14 days for the analyte list reported.

Method 8270D-SIM: Holding times for the 8270D-SIM analyses were less than 7 days in all cases.

C. Chain of Custody (COC)

1. Chain of Custody (COC) forms were reviewed and all fields were complete, signatures were present and cross outs were clean and initialed.

Yes__X__No_____

Samples were sent to the Pace Minneapolis laboratory. There are several instances in which cross-outs were not initialed.

In SDG 10502228, there is a note on the COC that the aqueous trip blanks froze and broke, so no trip blanks are available for this SDG.

Note that field duplicate samples do not include times in order to maintain their "blind" status to the laboratory. Dates and times should be recorded in the project field notebooks.

2. Samples were received at the required temperature and preservation.
Yes__X__No_____
Temperature:
EPA regulations (See Federal Register, March 12, 2007, 40CFR Part 122) require only that the temperature of samples delivered to the laboratory be less than 6° C and all samples intact. These requirements were met.

pH:
For Method(s) 8260B: All soil samples were properly preserved with methanol and analyzed within 14 days of the collection date. Water samples were properly preserved to pH < 2 and the applicable preservative was used. Preserved water samples must be analyzed within 14 days of the collections date. Improperly preserved water samples must be analyzed within 7 days of the collection dates.

The laboratory logs show that some samples were at a pH above 2. This includes the following samples:

Sample	Lab sample id	pH	Hold Time
SB-16 (10-13)	10501950003	4	7.8
SB-16 (25-27)	10501950005	7	7.9
GP-27 17-19'	10501950009	4	8.8
GP-27 38-40	10501950014	4	8

In addition, pH logs could not be located for SDG 10502407 and 10502608. Because the analytes reviewed are all chlorinated compounds, there is no impact of the elevated pH for these samples. 40CFR allows 14-day holding times for unpreserved chlorinated compounds. Other target compounds could be impacted if they become of interest. No qualifiers are applied.

III. **INSTRUMENT CALIBRATION - GC/MS**

A. Initial Calibration

1. The Relative Response Factor (RRF) and average RRF for all target compounds met the QAPP or method criteria. The current 2015 Validation Guidance requires a Response Factor (RF) of > 0.05 for all compounds. The method allows for lower RF (0.01) for poor responders if the detection limits are appropriately elevated to adjust for instrument sensitivity. The method criteria will be applied.

Yes__X__No_____N/A_____
Client compounds meet the updated criteria for poor responders. The full 8260B/Appendix IX list was submitted but was only reviewed for the 10 target compounds identified by the client. The relative standard deviation (RSD) for all compounds in the standard was less than 30% (with an allowance for up to 40% RSD for the poor responders). Per the method, a correlation coefficient, r, of > 0.99 is also acceptable for compounds not meeting a % RSD of < 20%.

Yes__X__No_____N/A_____
The laboratory runs a 9-point curve and uses a minimum of 5 contiguous points to produce the calibration curves. For vinyl chloride, the laboratory has used the lowest calibration point of 0.2 ug/L as the reporting limit. Where the %RSD exceeds 15%, the laboratory has used a nonlinear regression for quantification. The r2 values associated with these are >0.999. These practices are within SW-846 guidance.

2. The 12-hour system Performance Check was performed as required in SW-846.

Yes__X__No_____N/A_____

B. Continuing Calibration

1. The RRF 50 standard was analyzed at the required frequency, and the QC criteria were met.

Yes__X__No_____N/A_____
Client compounds meet the criteria.

2. The percent difference (% D) criterion of ± 25.0% for each target compound (with an allowance of 40% for the poor responders per the current validation guidance) was met.

Yes_____No__X__N/A_____
There are several CCVs in which chloroethane is recovered high for Method 8260B. The associated samples have no detected chloroethane, and so no qualifiers are required for this high bias.

For Method 8270D-SIM, all CCVs are in control.

IV. **GC/MS INSTRUMENT PERFORMANCE CHECK**

The BFB performance check was injected once at the beginning of each 12-hour period, and relative abundance criteria for the ions were met.
Yes__X__No_____N/A_____
All BFB criteria were met for method 8260B. DFTPP was run and passed criteria for Method 8270D-SIM, 1,4-dioxane. However, for SIM this tune check is not required.

V. **INTERNAL STANDARDS**

The Internal Standard (IS) area percent (Area %) recoveries were within the required control limits of -50.0 to + 100.0% of the daily calibration standard. The Retention Times were within the required windows.
Yes_____No__X__N/A_____
IS Area % recovery summaries were provided and were within criteria for all 8260B analyses. For 8270D-SIM the recovery of the 1,4-Dioxane-d8 internal standard is low in the analytical run used for a number of samples. Results for these samples are qualified as JI#, where # is the observed recovery. These same samples were also qualified for surrogate recoveries and so the listed qualifier includes JS#.

In the case of 8270D-SIM, the analysis uses 1,4-dioxane-d8 for the internal standard associated with 1,4-dioxane, making this an isotopic dilution analysis. Because the internal standard and target are nearly chemically identical, the accuracy of the analysis does not strongly depend on the recovery of the internal standard. Essentially the analysis is designed to self-correct for internal standard recovery to a much greater degree than a normal 8270D non-isotopic dilution analysis. See the discussion of this point under the Surrogate Standards section of this report.

For this reason, although the 1,4-dioxane results impacted by internal standard outliers are qualified, the effect on accuracy for this analyte should be regarded as minor, and the data should be fully usable. The results do show that the 1,4-dioxane and its internal standard are extracted less efficiently from those samples that have been qualified than for unqualified data.

In SDG 10501950, there are two runs of sample GP-27 8-12'. In one of these runs, the internal standard recovery is less than 10%. In addition, the associated LCS is recovered less than 10%. The result is rejected as shown in the table. The second run, although qualified for low internal standard recovery, is usable and the preferred result of the two.

Client ID	Lab ID	Analyte	Result	Units	MDL	DSA	EPA

VI. **SURROGATE STANDARDS**

A. Surrogate standard spikes were prepared and analyzed with every sample.

Yes__X__No_____

B. The recovery limits were within the required control limits of 50.0 – 130.0% and 30 – 130% for SIM as defined in the QAPP.

Yes__X__No_____

All surrogate recoveries met criteria for Method 8260B.

For Method 8270D-SIM, surrogates are within the 30-130% window.

The analysis involves quantifying 1,4-dioxane against 1,4-dioxane-d8 as an internal standard. 1,4-dioxane-d8 is quantified as a "surrogate" against a second internal standard, 1-4-dichlorobenzene-d4. Thus the analysis is an isotopic dilution, and the result is essentially automatically corrected for the recovery of 1,4-dioxane-d8. 1,4-dioxane and 1,4-dioxane-d8 and the target compound 1,4 dioxane are much more hydrophilic than is 1,4-dichlorobenzene-d4, which reduces their extraction efficiency and can cause the raw area counts of both 1,4-dioxane-d8 and 1,4-dioxane to be low relative to that of 1,4-dichlorobenzene-d4. This lower extraction efficiency would be similar for the target compound. This in turn results in a tendency for lower "surrogate" recoveries of 1,4-dioxane-d8.

VII. MATRIX SPIKE/MATRIX SPIKE DUPLICATE

A. Matrix Spike (MS) and Matrix Spike Duplicate (MSD) samples were prepared and analyzed per every 20 samples for every matrix.

Yes__X__No_____

The samples used for MS/MSDs in this set are shown below.

SDG	Method	Matrix	MS/MSD Parent Sample
10501950	8260B	Solid	GP-27 5-7.5
10501950	8260B, 8270D-SIM	Water	SB-16 (10-13)
10502086	8260B, 8270D-SIM	Water	GP-29 (11-13)
10502608	8260B, 8270D-SIM	Water	GP-33 (21-24)

There were other MS/MSDs reported in the data set, but they were associated with other SDGS and are not evaluated.

B. The MS and MSD percent recoveries were within the limits defined in the QAPP of 50 – 130% for volatiles and 30 - 150% for SIM.

Yes_____No__X_____

There are a number of outliers present in the 8260B data. However, in all cases recoveries are high, and associated samples are non-detects. Data would be qualified JMS#, where # is the value of the %R. In this case there are no qualifiers required.

C. The Matrix Spike Duplicate relative percent differences (RPD) were within the required control limit of less than 30.0% as defined in the QAPP.

Yes__X__No_____

VIII. LABORATORY CONTROL SAMPLE

A. Laboratory Control Samples (LCS) were prepared and analyzed at the required frequency.

Yes__X__No_____

B. The LCS percent recoveries were within the limits defined in the QAPP of 60 – 130% (40% poor responders) for volatiles and 40 – 130% for SIM, as defined in the QAPP.

Yes_____No__X__

8260B: Chloroethane was recovered above 130% in 5 cases, and 1,1-Dichloroethene was recovered above 130% in one case. In all these instances, associated samples are non-detects for these targets, and no qualifiers are required for the possible high bias.

8270D-SIM: The recovery of 1,4-dioxane was below 10% in one LCS analyzed in SDG 10501950. The associated sample result is qualified as R, unusable. A second run is available for this sample with an acceptable LCS and should be used for project decisions.

IX. **BLANKS**

A. Method Blanks were prepared and analyzed at the required frequency.

Yes__X__No_____

B. No blank contamination was found in the Method Blank.

Yes_____No__X__

There are no analytes reported in any of the method blanks for 8260B.
1,4-Dioxane was detected in one 8270D method blank. The associated samples are all non-detects for 1,4-dioxane, and no qualifiers are required.

C. If Equipment Rinse Blanks, Trip Blanks, or other Field Blanks were identified, no blank contamination was found.

Yes__X__No_____N/A_____

Trip and field blanks are free of contamination and no qualifiers are required.

X. **FIELD QC**

If Field duplicates or Performance Check Compounds were identified, the results were within the guidance limit of < 50% RPD for soil or 35 % RPD for water . If values are less than 5 × RL, the water limit is a difference of ±2 x RL and soil is 4 x RL.

Yes__X__No_____N/A___

The client has identified field duplicate set as listed in the table below and all are within precision limits:

SDG	Sample ID	Field Duplicate ID	Matrix	Methods
10502407	GP-31 (9-11)	DUP121219	Water	8260B, 8270D-SIM

Field duplicate criteria were met in all cases.

XI. **SYSTEM PERFORMANCE**

A. The reconstructed ion chromatograms (RIC), chromatograms, tunes and general system performance were acceptable for all instruments and analytical systems.

Yes__X__No_____N/A_____

For 8260B and 8270D-SIM, most of the chromatograms were relatively clean. The chromatographic quality was within acceptance limits.

B. The suggested EQLs for the sample matrices were met.

Yes__X__No_____N/A_____

XII. **TCL COMPOUNDS**

A. The identification was accurate, and all retention times, library spectra and RIC were evaluated for all detected compounds.

Yes__X__No_____N/A_____

Where there were detected targets, the match with the library spectra were acceptable and retention times were within limits.

B. Quantitation of representative compounds was checked to determine the accuracy of the calculation algorithm for in each internal standard quantitation set.
Yes__X__No_____N/A_____

XIII. **OVERALL ASSESSMENT OF THE CASE**
The laboratory has complied with the requested method. Data are fully usable and no qualifiers are added.

Deliverables
The following are noted for clarification:
This is a validation review for 10 project-specific compounds by SW-846 Method 8260B and 1 compound (1,4-dioxane) by method 8270D-SIM. Data were provided for 14 solid and 42 aqueous samples for 8260B which includes 1 aqueous field duplicate, 4 solids trip blanks, 5 water rinsate blanks, and 1 water trip blank; 41 aqueous samples for 8270D-SIM (1,4-dioxane) including 1 aqueous field duplicate and 5 aqueous rinsate blanks. Hard copy data were not submitted, but the full packages were provided as pdf. Results are incorporated into the associated EDDs. The laboratory reports a full list of volatiles targets but only the client-specified 10 compounds are reviewed.

None of the project reports include a Case Narrative. In addition, the laboratory "qualifier flags" that reflect calibration or other QC issues are not incorporated into the EDDs. This information is lost in the electronic deliverables and must be obtained from the pdf reports. The DSA qualifiers, however, have a code for each type of outlier (MS/MSD, LCS, MB) etc), the value of the outlier (%R, RPD or result). These are part of the validation deliverable in the tables and the EDD.

This is a validation review and includes review of the raw data. The data were validated with a minimum of 10% validated as EPA raw data review. All SDGs are Level IV.

Chain of Custody
Samples were sent to the Pace Minneapolis laboratory. There are several instances in which cross-outs were not initialed.

In SDG 10502228, there is a note on the COC that the aqueous trip blanks froze and broke, so no trip blanks are available for this SDG.

Note that field duplicate samples do not include times in order to maintain their "blind" status to the laboratory. Dates and times should be recorded in the project field notebooks.

Sample Preservation
pH:
For Method(s) 8260B: All soil samples were properly preserved with methanol and analyzed within 14 days of the collection date. Water samples were properly preserved to pH < 2 and the applicable preservative was used. Preserved water samples must be analyzed within 14 days of the collections date. Improperly preserved water samples must be analyzed within 7 days of the collection dates.

The laboratory logs show that some samples were at a pH above 2. This includes the following samples:

Sample	Lab sample id	pH	Hold Time
SB-16 (10-13)	10501950003	4	7.8
SB-16 (25-27)	10501950005	7	7.9

GP-27 17-19'	10501950009	4	8.8
GP-27 38-40	10501950014	4	8

In addition, pH logs could not be located for SDG 10502407 and 10502608. Because the analytes reviewed are all chlorinated compounds, there is not impact of the elevated pH for these samples. 40CFR allows 14-day holding times for unpreserved chlorinated compounds. Other target compounds could be impacted if they become of interest. No qualifiers are applied.

Method Blanks

There are no analytes reported in any of the method blanks for 8260B.
1,4-Dioxane was detected in one 8270D method blank. The associated samples are all non-detects for 1,4-dioxane, and no qualifiers are required.

Internal Standards

IS Area % recovery summaries were provided and were within criteria for all 8260B analyses. For 8270D-SIM the recovery of the 1,4-Dioxane-d8 internal standard is low in the analytical run used for a number of samples. Results for these samples are qualified as JI#, where # is the observed recovery. These same samples were also qualified for surrogate recoveries and so the listed qualifier includes JS#.

In the case of 8270D-SIM, the analysis uses 1,4-dioxane-d8 for the internal standard associated with 1,4-dioxane, making this an isotopic dilution analysis. Because the internal standard and target are nearly chemically identical, the accuracy of the analysis does not strongly depend on the recovery of the internal standard. Essentially the analysis is designed to self-correct for internal standard recovery to a much greater degree than a normal 8270D non-isotopic dilution analysis. See the discussion of this point under the Surrogate Standards section of this report.

For this reason, although the 1,4-dioxane results impacted by internal standard outliers are qualified, the effect on accuracy for this analyte should be regarded as minor, and the data should be fully usable. The results do show that the 1,4-dioxane and its internal standard are extracted less efficiently from those samples that have been qualified than for unqualified data.

In SDG 10501950, there are two runs of sample GP-27 8-12'. In one of these runs, the internal standard recovery is less than 10%. In addition, the associated LCS is recovered less than 10%. The result is rejected as shown in the table within the body of this result. The second run, although qualified for low internal standard recovery, is usable and the preferred result of the two.

Surrogates

All surrogate recoveries met criteria for Method 8260B.

For Method 8270D-SIM, surrogates are within the 30-130% window.

The analysis involves quantifying 1,4-dioxane against 1,4-dioxane-d8 as an internal standard. 1,4-dioxane-d8 is quantified as a "surrogate" against a second internal standard, 1-4-dichlorobenzene-d4. Thus the analysis is an isotopic dilution, and the result is essentially automatically corrected for the recovery of 1,4-dioxane-d8. 1,4-dioxane and 1,4-dioxane-d8 and the target compound 1,4 dioxane are much more hydrophilic than is 1,4-dichlorobenzene-d4, which reduces their extraction efficiency and can cause the raw area counts of both 1,4-dioxane-d8 and 1,4-dioxane to be low relative to that of 1,4-

dichlorobenzene-d4. This lower extraction efficiency would be similar for the target compound. This in turn results in a tendency for lower "surrogate" recoveries of 1,4-dioxane-d8.

Matrix Spikes and MS Duplicates
The samples used for MS/MSDs in this set are shown below.

SDG	Method	Matrix	MS/MSD Parent Sample
10501950	8260B	Solid	GP-27 5-7.5
10501950	8260B, 8270D-SIM	Water	SB-16 (10-13)
10502086	8260B, 8270D-SIM	Water	GP-29 (11-13)
10502608	8260B, 8270D-SIM	Water	GP-33 (21-24)

There were other MS/MSDs reported in the data set, but they were associated with other SDGS and are not evaluated.

There are a number of outliers present in the 8160B data. However, in all cases recoveries are high, and associated samples are non-detects. Data would be qualified JMS#, where # is the value of the %R. In this case there are no qualifiers required.

Laboratory Control Samples
8260B: Chloroethane was recovered above 130% in 5 cases, and 1,1-Dichloroethene was recovered above 130% in one case. In all these instances, associated samples are non-detects for these targets, and no qualifiers are required for the possible high bias.
8270D-SIM: The recovery of 1,4-dioxane was below 10% in one LCS analyzed in SDG 10501950. The associated sample result is qualified as R, unusable. A second run is available for this sample with an acceptable LCS.

Equipment Rinse Blank, Trip Blanks or other Field Blanks
Trip and field blanks are free of contamination and no qualifiers are required.

Field Duplicates
The client has identified field duplicate set as listed in the table below and all are within precision limits:

SDG	Sample ID	Field Duplicate ID	Matrix	Methods
10502407	GP-31 (9-11)	DUP121219	Water	8260B, 8270D-SIM

Field duplicate criteria were met in all cases.

Compound Identification
Where there were detected targets, the match with the library spectra were acceptable and retention times were within limits.

SUMMARY TABLE OF QUALIFIED DATA

Client ID	Lab ID	Analyte	Result	Units	MDL	DSA	EPA

DATA VALIDATION FORM FOR ORGANICS

SDGs: 150: 01264, 01393, 01783, 01787, 01793

PROJECT: Water Gremlin, MN; Project # 2606-0017 Water Gremlin, Wenck Environmental Consulting and Engineering

LABORATORY: Pace Analytical, Minneapolis, MN and Pace National, Mt. Joliet, TN

SAMPLE MATRIX: Water and Solid

SAMPLING DATE: August and October, 2019

NO. OF SAMPLES: 23 solid and 62 aqueous samples for 8260B which includes, 5 aqueous field duplicates,1 MEOH solids blank, 3 solids trip blanks, 6 water rinsate blanks, and 2 water trip blanks; 7 solid and 59 aqueous samples for 8270D-SIM (1,4-dioxane) including 5 aqueous field duplicates and 5 aqueous rinsate blanks.

ANALYSES REQUESTED: SW-846 Method 8260B, 8270D-SIM

SAMPLE NUMBERS: See Attached List

DATA REVIEWER: John Huntington

QA REVIEWER: Diane Short and Associates Inc. INITIALS/DATE: DLS 01/28/2020

Telephone Logs included Yes_____No__X__

Contractual Violations Yes_____No__X__

Comments:

I. **DELIVERABLES**

All deliverables were present as specified in the QAPP.

Yes__X__No_____

The following are noted for clarification:

This is a validation review for 10 project-specific compounds by SW-846 Method 8260B and 1 compound (1,4-dioxane) by method 8270D-SIM. Data were provided for 23 solid and 62 aqueous samples for 8260B which includes 5 aqueous field duplicates,1 MeOH solids blank, 3 solids trip blanks, 6 water rinsate blanks, and 2 water trip blanks; 7 solid and 59 aqueous samples for 8270D-SIM (1,4-dioxane) including 5 aqueous field duplicates and 5 aqueous rinsate blanks. Hard copy data were not submitted, but the full packages were provided as pdf. Results are incorporated into the associated EDDs. The laboratory reports a full list of volatiles targets but only the client-specified 10 compounds are reviewed.

None of the project reports include a Case Narrative. In addition, the laboratory "qualifier flags" that reflect calibration or other QC issues are not incorporated into the EDDs. This information is lost in the electronic deliverables and must be obtained from the pdf reports. The DSA qualifiers, however, have a code for each type of outlier (MS/MSD, LCS, MB) etc), the value of the outlier (%R, RPD or result). These are part of the validation deliverable in the tables and the EDD.

This is a validation review and includes review of the raw data. The data were validated with a minimum of 10% validated as EPA raw data review. All SDGs are Level IV.

II. **ANALYTICAL REPORT FORMS**

A. The Analytical Report or Data Sheets are present and complete for all requested analyses.

Yes__X__No_____

B. Holding Times

The required holding times were met for all analyses (time of sample receipt to time of analysis- VOA).

Yes _X__No_____

For Method 8260B: All soil and water samples were analyzed within 14 days from the sample collection date. Soil samples were preserved in methanol. Holding times are specified as 14 days for the analyte list reported.

Method 8270D-SIM: Holding times for the 8270 analyses were less than 7 days in all cases.

C. Chain of Custody (COC)

1. Chain of Custody (COC) forms were reviewed and all fields were complete, signatures were present and cross outs were clean and initialed.

Yes__X__No_____

Samples were sent to the Pace Minneapolis laboratory. In one case (10501264), they were subsequently sent to the Pace Mt. Joliet laboratory for 8260 analysis and have COC documentation for both shipments.

Note that field duplicate samples do not include times in order to maintain their "blind" status to the laboratory. Dates and times should be recorded in the project field notebooks.

2. Samples were received at the required temperature and preservation.

Yes__X__No_____

Temperature:
EPA regulations (See Federal Register, March 12, 2007, 40CFR Part 122) require only that the temperature of samples delivered to the laboratory be less than 6° C and all samples intact. These requirements were met.

pH:

For Method(s) 8260B: All soil samples were properly preserved with methanol and analyzed within 14 days of the collection date. Water samples were properly preserved to pH < 2 and the applicable preservative was used. Preserved water samples must be analyzed within 14 days of the collections date. Improperly preserved water samples must be analyzed within 7 days of the collection dates.

III. **INSTRUMENT CALIBRATION - GC/MS**

A. Initial Calibration

1. The Relative Response Factor (RRF) and average RRF for all target compounds met the QAPP or method criteria. The current 2015 Validation Guidance requires a Response Factor (RF) of > 0.05 for all compounds. The method allows for lower RF (0.01) for poor responders if the detection limits are appropriately elevated to adjust for instrument sensitivity. The method criteria will be applied.

Yes__X__No_____N/A_____
Client compounds meet the updated criteria for poor responders. The full 8260B/Appendix IX list was submitted but was only reviewed for the 10 target compounds identified by the client. The relative standard deviation (RSD) for all compounds in the standard was less than 30% (with an allowance for up to 40% RSD for the poor responders). Per the method, a correlation coefficient, r, of > 0.99 is also acceptable for compounds not meeting a % RSD of < 20%.

Yes__X__No_____N/A_____
The laboratory runs a 9-point curve (8 points for Pace National) and uses a minimum of 5 contiguous points to produce the calibration curves. For vinyl chloride, the laboratory has used the lowest calibration point of 0.2 ug/L as the reporting limit. Where the %RSD exceeds 15%, the laboratory has used a nonlinear regression for quantification. The r2 values associated with these are >0.999. These practices are within SW-846 guidance.

2. The 12-hour system Performance Check was performed as required in SW-846.

Yes__X__No_____N/A_____

B. Continuing Calibration

1. The RRF 50 standard was analyzed at the required frequency, and the QC criteria were met.

Yes__X__No_____N/A_____
Client compounds meet the criteria.

2. The percent difference (% D) criterion of ± 25.0% for each target compound (with an allowance of 40% for the poor responders per the current validation guidance) was met.

Yes__X__No_____N/A_____

IV. **GC/MS INSTRUMENT PERFORMANCE CHECK**

The BFB performance check was injected once at the beginning of each 12-hour period, and relative abundance criteria for the ions were met.
Yes__X__No_____N/A_____
All BFB criteria were met for method 8260B. DFTPP was run and passed criteria for Method 8270D-SIM, 1,4-dioxane. However, for SIM this tune check is not required.

V. **INTERNAL STANDARDS**
The Internal Standard (IS) area percent (Area %) recoveries were within the required control limits of -50.0 to + 100.0% of the daily calibration standard. The Retention Times were within the required windows.
Yes_____No__X__N/A_____
IS Area % recovery summaries were provided and were within criteria for all 8260B analyses. For 8270D-SIM the recovery of the 1,4-Dioxane-d8 internal standard is low in the analytical run used for a number of samples. Results for these samples are qualified as JI#, where # is the observed recovery. These same samples were also qualified for surrogate recoveries and so the listed qualifier includes JS#.

In the case of 8270D-SIM, the analysis uses 1,4-dioxane-d8 for the internal standard associated with 1,4-dioxane, making this an isotopic dilution analysis. Because the internal standard and target are nearly chemically identical, the accuracy of the analysis does not strongly depend on the recovery of the internal standard. Essentially the analysis is designed to self-correct for internal standard recovery to a much greater degree than a normal 8270D non-isotopic dilution analysis. See the discussion of this point under the Surrogate Standards section of this report.

For this reason, although the 1,4-dioxane results impacted by internal standard outliers are qualified, the effect on accuracy for this analyte should be regarded as minor, and the data should be fully usable. The results do show that the 1,4-dioxane and its internal standard are extracted less efficiently from those samples that have been qualified than for unqualified data.

VI. **SURROGATE STANDARDS**

A. Surrogate standard spikes were prepared and analyzed with every sample.

Yes__X__No_____

B. The recovery limits were within the required control limits of 50.0 – 130.0% and 30 – 130% for SIM as defined in the QAPP.

Yes_____No__X__

All surrogate recoveries met criteria for Method 8260B.

For Method 8270D-SIM, surrogates are within the 30-130% window.

The analysis involves quantifying 1,4-dioxane against 1,4-dioxane-d8 as an internal standard. 1,4-dioxane-d8 is quantified as a "surrogate" against a second internal standard, 1-4-dichlorobenzene-d4. Thus the analysis is an isotopic dilution, and the result is essentially automatically corrected for the recovery of 1,4-dioxane-d8. 1,4-dioxane and 1,4-dioxane-d8 and the target compound 1,4 dioxane are much more hydrophilic than is 1,4-dichlorobenzene-d4, which reduces their extraction efficiency and can cause the raw area counts of both 1,4-dioxane-d8 and 1,4-dioxane to be low relative to that of 1,4-dichlorobenzene-d4. This lower extraction efficiency would be similar for the target compound. This in turn results in a tendency for lower "surrogate" recoveries of 1,4-dioxane-d8.

The recoveries of 1,4-dioxane in 8270D-SIM LCS runs are consistent with this. Recoveries of 1,4-dioxane in the project LCS runs are all between 84% and 114%. At the same time, the "surrogate" recovery for the same runs is much lower, between 33% and 43%.

VII. **MATRIX SPIKE/MATRIX SPIKE DUPLICATE**

A. Matrix Spike (MS) and Matrix Spike Duplicate (MSD) samples were prepared and analyzed per every 20 samples for every matrix.

Yes__X__No_____

The samples used for MS/MSDs in this set are shown below.

SDG	Method	Matrix	MS/MSD Parent Sample
10501264	EPA 8260B	Water	SB-9 (23-25)
	EPA 8270C	Water	SB-9 (23-25)
10501393	EPA 8260B	Solid	SB-12 (8-10)
	EPA 8260B	Water	GP-25 (44-46)
	EPA 8270C	Water	GP-25 (44-46)

There were other MS/MSDs reported in the data set, but they were associated with other SDGS and are not evaluated.

Yes__X__No_____

Data would be qualified JMS#, where # is the value of the %R. In this case there are no qualifiers required. All MS/MSD recoveries were within the laboratory QC limits.

B. The Matrix Spike Duplicate relative percent differences (RPD) were within the required control limit of less than 30.0% as defined in the QAPP.

Yes__X__No_____

VIII. **LABORATORY CONTROL SAMPLE**

A. Laboratory Control Samples (LCS) were prepared and analyzed at the required frequency.

Yes__X__No_____

B. The LCS percent recoveries were within the limits defined in the QAPP of 60 – 130% (40% poor responders) for volatiles and 40 – 130% for SIM, as defined in the QAPP.

Yes_____No__X__

Two recoveries were outside the project QC limits of 60-130% for chloroethane and five for vinyl chloride, requiring qualification of associated samples as JL#, where # is the outlier recovery. Data could be biased low in proportion to the recovery.

CLIENT ID	LAB ID	Analyte	RESULT mg/kg	MDL	DSA	EPA
GP-25 (0-2.5)	10501393010	Chloroethane	ND	0.028	JL45	J-
GP-25 (7.5-10)	10501393011	Chloroethane	ND	0.031	JL45	J-
SB-11 (8-10)	10501393020	Vinyl chloride	ND	0.012	JL56	J-
SB-11 (15-17)	10501393021	Vinyl chloride	ND	0.012	JL56	J-
SB-12 (8-10)	10501393026	Vinyl chloride	ND	0.012	JL56	J-
TRIP BLANK	10501393031	Vinyl chloride	ND	0.0098	JL56	J-

IX. **BLANKS**

A. Method Blanks were prepared and analyzed at the required frequency.

Yes__X__No_____

B. No blank contamination was found in the Method Blank.

Yes_____No__X__

There are no analytes reported in any of the 8260B method blanks.
1,4-Dioxane was detected in one 8270D method blank. The associated sample is qualified as UB#, where # is the level observed in the method blank. Data are fully usable as non-detected values.

Client ID	Lab ID	Analyte	Result ug/L	MDL	DSA	EPA
DUP 120619-B	10501793013	1,4-DIOXANE (SIM)	1	0.086	UMB0.26	UB

C. If Equipment Rinse Blanks, Trip Blanks, or other Field Blanks were identified, no blank contamination was found.

Yes__X__No_____N/A_____

Trip and field blanks are free of contamination and no qualifiers are required.

X. **FIELD QC**

If Field duplicates or Performance Check Compounds were identified, the results were within the guidance limit of < 50% RPD for soil or 35 % RPD for water . If values are less than 5 × RL, the water limit is a difference of ±2 x RL and soil is 4 x RL.

Yes__X__No_____N/A___

The client has identified field duplicate set as listed in the table below and all are within precision limits:

SDG	Sample ID	Field Duplicate ID	Matrix	Methods
10501264	SB-8 (15-17)	DUP120219	Water	8260B, 8270D-SIM
10501264	SB-10 (23-25)	DUP120319	Water	8260B, 8270D-SIM
10501393	GP-24 (17-19)	Dup120419-A	Water	8260B, 8270D-SIM
10501783	GP-26 15-17'	DUP120519-A	Water	8260B, 8270D-SIM

SDG	Sample ID	Field Duplicate ID	Matrix	Methods
10501793	GP-28 39-41'	DUP 120619-B	Water	8260B, 8270D-SIM

Field duplicate criteria were met in all cases.

XI. SYSTEM PERFORMANCE

A. The reconstructed ion chromatograms (RIC), chromatograms, tunes and general system performance were acceptable for all instruments and analytical systems.

Yes__X__No_____N/A_____

For 8260B and 8270D-SIM, most of the chromatograms were relatively clean. The chromatographic quality was within acceptance limits.

B. The suggested EQLs for the sample matrices were met.

Yes__X__No_____N/A_____

XII. TCL COMPOUNDS

A. The identification was accurate, and all retention times, library spectra and RIC were evaluated for all detected compounds.

Yes__X__No_____N/A_____

Where there were detected targets, the match with the library spectra were acceptable and retention times were within limits.

B. Quantitation of representative compounds was checked to determine the accuracy of the calculation algorithm for in each internal standard quantitation set.

Yes__X__No_____N/A_____

XIII. OVERALL ASSESSMENT OF THE CASE

The laboratory has complied with the requested method. Data are fully usable and no qualifiers are added.

Deliverables

The following are noted for clarification:

This is a validation review for 10 project-specific compounds by SW-846 Method 8260B and 1 compound (1,4-dioxane) by method 8270D-SIM. Data were provided for 23 solid and 62 aqueous samples for 8260B which includes 5 aqueous field duplicates,1 MEOH solids blank, 3 solids trip blanks, 6 water rinsate blanks, and 2 water trip blanks; 7 solid and 59 aqueous samples for 8270D-SIM (1,4-dioxane) including 5 aqueous field duplicates and 5 aqueous rinsate blanks. Hard copy data were not submitted, but the full packages were provided as pdf. Results are incorporated into the associated EDDs. The laboratory reports a full list of volatiles targets but only the client-specified 10 compounds are reviewed.

None of the project reports include a Case Narrative. In addition, the laboratory “qualifier flags” that reflect calibration or other QC issues are not incorporated into the EDDs. This information is lost in the electronic deliverables and must be obtained from the pdf reports. The DSA qualifiers, however, have a code for each type of outlier (MS/MSD, LCS, MB) etc), the value of the outlier (%R, RPD or result). These are part of the validation deliverable in the tables and the EDD.

This is a validation review and includes review of the raw data. The data were validated with a minimum of 10% validated as EPA raw data review. All SDGs are Level IV.

Chain of Custody

Samples were sent to the Pace Minneapolis laboratory. In one case (10501264), they were subsequently sent to the Pace Mt. Joliet laboratory for 8260 analysis and have COC documentation for both shipments.

Note that field duplicate samples do not include times in order to maintain their "blind" status to the laboratory. Dates and times should be recorded in the project field notebooks.

Method Blanks

There are no analytes reported in any of the 8260B method blanks.
1,4-Dioxane was detected in one 8270D method blank. The associated sample is qualified as UB#, where # is the level observed in the method blank**.** Data are fully usable as non-detected values

Internal Standards

IS Area % recovery summaries were provided and were within criteria for all 8260B analyses. For 8270D-SIM the recovery of the 1,4-Dioxane-d8 internal standard is low in the analytical run used for a number of samples. Results for these samples are qualified as JI#, where # is the observed recovery. These same samples were also qualified for surrogate recoveries and so the listed qualifier includes JS#.

In the case of 8270D-SIM, the analysis uses 1,4-dioxane-d8 for the internal standard associated with 1,4-dioxane, making this an isotopic dilution analysis. Because the internal standard and target are nearly chemically identical, the accuracy of the analysis does not strongly depend on the recovery of the internal standard. Essentially the analysis is designed to self-correct for internal standard recovery to a much greater degree than a normal 8270D non-isotopic dilution analysis. See the discussion of this point under the Surrogate Standards section of this report.

For this reason, although the 1,4-dioxane results impacted by internal standard outliers are qualified, the effect on accuracy for this analyte should be regarded as minor, and the data should be fully usable. The results do show that the 1,4-dioxane and its internal standard are extracted less efficiently from those samples that have been qualified than for unqualified data.

Surrogates

All surrogate recoveries met criteria for Method 8260B.

For Method 8270D-SIM, surrogates are within the 30-130% window.

The analysis involves quantifying 1,4-dioxane against 1,4-dioxane-d8 as an internal standard. 1,4-dioxane-d8 is quantified as a "surrogate" against a second internal standard, 1-4-dichlorobenzene-d4. Thus the analysis is an isotopic dilution, and the result is essentially automatically corrected for the recovery of 1,4-dioxane and 1,4-dioxane-d8 and the target compound 1,4 dioxane are much more hydrophilic than is 1,4-dichlorobenzene-d4, which reduces their extraction efficiency and can cause the raw area counts of both 1,4-dioxane-d8 and 1,4-dioxane to be low relative to that of 1,4-dichlorobenzene-d4. This lower extraction efficiency would be similar for the target compound. This in turn results in a tendency for lower "surrogate" recoveries of 1,4-dioxane-d8.

The recoveries of 1,4-dioxane in 8270D-SIM LCS runs are consistent with this. Recoveries of 1,4-dioxane in the project LCS runs are all between 84% and 114%. At the same time, the "surrogate" recovery for the same runs is much lower, between 33% and 43%.

Matrix Spikes and MS Duplicates
The samples used for MS/MSDs in this set are shown below.

SDG	Method	Matrix	MS/MSD Parent Sample
10501264	EPA 8260B	Water	SB-9 (23-25)
	EPA 8270C	Water	SB-9 (23-25)
10501393	EPA 8260B	Solid	SB-12 (8-10)
	EPA 8260B	Water	GP-25 (44-46)
	EPA 8270C	Water	GP-25 (44-46)

There were other MS/MSDs reported in the data set, but they were associated with other SDGS and are not evaluated.

Laboratory Control Samples
Two recoveries were outside the project QC limits of 60-130% for chloroethane and five for vinyl chloride, requiring qualification of associated samples as JL#, where # is the outlier recovery. Data are fully usable as non-detected values. Data could be biased low in proportion to the recovery.

Equipment Rinse Blank, Trip Blanks or other Field Blanks
Trip and field blanks are free of contamination and no qualifiers are required.

Field Duplicates
The client has identified field duplicate set as listed in the table below and all are within precision limits:

SDG	Sample ID	Field Duplicate ID	Matrix	Methods
10501264	SB-8 (15-17)	DUP120219	Water	8260B, 8270D-SIM
10501264	SB-10 (23-25)	DUP120319	Water	8260B, 8270D-SIM
10501393	GP-24 (17-19)	Dup120419-A	Water	8260B, 8270D-SIM
10501783	GP-26 15-17'	DUP120519-A	Water	8260B, 8270D-SIM
10501793	GP-28 39-41'	DUP 120619-B	Water	8260B, 8270D-SIM

Field duplicate criteria were met in all cases.

Compound Identification
Where there were detected targets, the match with the library spectra were acceptable and retention times were within limits.

SAMPLE MATRIX: Water and Solid

SAMPLING DATE: August and October, 2019

NO. OF SAMPLES: 9 solid and 34 aqueous samples for 8260B which includes 1 solid field duplicates, 3 aqueous field duplicates, 1 methanol solids trip blank, 4 aqueous trip blanks, and 4 rinsate blanks; 9 aqueous samples for 8270D-SIM (1,4-dioxane) including 1 field duplicate and 1 rinsate blank

ANALYSES REQUESTED: SW-846 Method 8260B, 8270D-SIM

SAMPLE NUMBERS: See Attached List

DATA REVIEWER: John Huntington

QA REVIEWER: Diane Short and Associates Inc. INITIALS/DATE: DLS 01/06/2020

Telephone Logs included Yes_____No__X__

Contractual Violations Yes_____No__X__

Comments:

I. **DELIVERABLES**

All deliverables were present as specified in the QAPP.

Yes_____No__X__

The following are noted for clarification:

This is a validation review for 10 project-specific compounds by SW-846 Method 8260B and 1 compound (1,4-dioxane) by method 8270D-SIM. Data were provided for 9 solid and 34 aqueous Samples for 8260B which includes 1 solid field duplicates, 3 aqueous field duplicates, 1 methanol solids trip blank, 4 aqueous trip blanks, and 4 rinsate blanks; 9 aqueous samples for 8270D-SIM (1,4-dioxane) including 1 field duplicate and 1 rinsate blank. Hard copy data were not submitted, but the full packages were provided as pdf. Results are incorporated into the associated EDDs. The laboratory reports a full list of volatiles targets but only the client-specified 10 compounds are reviewed.

None of the project reports include a Case Narrative. In addition, the laboratory "qualifier flags" that reflect calibration or other QC issues are not incorporated into the EDDs. This information is lost in the electronic deliverables and must be obtained from the pdf reports.

This is a validation review and includes review of the raw data. The data were validated with a minimum of 10% validated as EPA raw data review. All SDGs are Level IV.

II. **ANALYTICAL REPORT FORMS**

A. The Analytical Report or Data Sheets are present and complete for all requested analyses.

Yes__X__No_____

B. Holding Times

The required holding times were met for all analyses (time of sample receipt to time of analysis- VOA).

Yes__X__No_____

For Method(s) 8260B and 8270D-SIM: All soil and water samples were analyzed within 7 days from the sample collection date.

C. Chain of Custody (COC)

1. Chain of Custody (COC) forms were reviewed and all fields were complete, signatures were present and cross outs were clean and initialed.

Yes__X__No_____

For SDG 10494421: The lab reports that there was an extra container of sample SB-7 (8-10), not listed on the COC. There is no discussion about how this was handled.

Note that field duplicate samples do not include times in order to maintain their "blind" status to the laboratory. Dates and times should be recorded in the project field notebooks.

2. Samples were received at the required temperature and preservation.

Yes__X__No_____

Temperature:

EPA regulations (See Federal Register, March 12, 2007, 40CFR Part 122) require only that the temperature of samples delivered to the laboratory be less than 6^{o} C and all samples intact. For SDG 10489386, the cooler temperature is reported as 17.2^{o} C. However, in this case the samples were received on the same day of sampling in less than 2 hours of the sample time. In this case the samples had not had time to cool prior to delivery to the lab and no qualifiers are required.

pH:

For Method(s) 8260B: All soil samples were properly preserved with methanol and analyzed within 14 days of the collection date. Water samples were properly preserved to pH < 2 and the applicable preservative was used. Preserved water samples must be analyzed within 14 days of the collections date. Improperly preserved water samples must be analyzed within 7 days of the collection dates.

III. **INSTRUMENT CALIBRATION - GC/MS**

A. Initial Calibration

1. The Relative Response Factor (RRF) and average RRF for all target compounds met the QAPP or method criteria. The current 2015 Validation Guidance requires a Response Factor (RF) of > 0.05 for all compounds. The method allows for lower RF (0.01) for poor responders if the detection limits are appropriately elevated to adjust for instrument sensitivity. The method criteria will be applied.

Yes__X__No_____N/A_____

Client compounds meet the updated criteria for poor responders. The full 8260B/Appendix IX list was submitted but was only reviewed for the 10 target compounds identified by the client. The relative standard deviation (RSD) for all compounds in the standard was less than 30% (with an allowance for up to 40% RSD for the poor responders). Per the method, a correlation coefficient, r, of > 0.99 is also acceptable for compounds not meeting a % RSD of < 20%.

Yes__X__No_____N/A_____

The laboratory runs a 9-point curve and uses a minimum of 5 contiguous points to produce the calibration curves. For vinyl chloride, the laboratory has used the lowest calibration point of 0.2 ug/L as the reporting limit. Where the %RSD exceeds 15%, the laboratory has used a nonlinear regression for quantification. The r2 values associated with these are >0.999. These practices are within SW-846 guidance.

2. The 12 hour system Performance Check was performed as required in SW-846.

Yes__X__No_____N/A_____

B. Continuing Calibration

1. The RRF 50 standard was analyzed at the required frequency, and the QC criteria were met.

Yes__X__No_____N/A_____

Client compounds meet the criteria.

2. The percent difference (% D) criterion of ± 25.0% for each target compound (with an allowance of 40% for the poor responders per the current validation guidance) was met.

Yes_____No__X__N/A_____

There are two high responses for chloroethane, one on 10/10/2019 associated with SDG 10494294 and one on 10/12/2019 associated with SDG 10494421. Samples impacted by these CCVs show no detection for chloroethane and no qualifiers are required.

IV. **GC/MS INSTRUMENT PERFORMANCE CHECK**

The BFB performance check was injected once at the beginning of each 12-hour period, and relative abundance criteria for the ions were met.

Yes__X__No_____N/A_____

All BFB criteria were met for method 8260B. DFTPP was run and passed criteria for Method 8270D-SIM, 1,4-dioxane. However, for SIM this tune check is not required.

V. **INTERNAL STANDARDS**

The Internal Standard (IS) area percent (Area %) recoveries were within the required control limits of -50.0 to + 100.0% of the daily calibration standard. The Retention Times were within the required windows.

Yes_____No__X__N/A_____

IS Area % recovery summaries were provided and were within criteria for all 8260B analyses. For 8270D-SIM the recovery of the 1,4-Dioxane-d8 internal standard is low in the analytical run used for samples SB-1 and SB-3 in SDG 10494294. Results for these samples are qualified as JI#, where # is the observed recovery. These same samples were also qualified for surrogate recoveries and so the listed qualifier includes JS#.

Client ID	Lab ID	Analyte	Result	Units	MDL	DSA	EPA
SB-1	10494294002	1,4-Dioxane (SIM)	ND	ug/L	0.086	JS49I48	J-
SB-3	10494294009	1,4-Dioxane (SIM)	ND	ug/L	0.082	JS46I44	J-

VI. **SURROGATE STANDARDS**

A. Surrogate standard spikes were prepared and analyzed with every sample.

Yes__X__No_____

B. The recovery limits were within the required control limits of 50.0 – 130.0% as defined in the QAPP.

Yes_____No__X__

All surrogate recoveries met criteria for Method 8260B. For Method 8270D-SIM, surrogates were out of limits low in two samples, requiring qualification as JS#, where # is the observed recovery. The data could be biased low proportional to the %R. These same samples were also qualified for internal standard recoveries and so the listed qualifier includes JI#.

Client ID	Lab ID	Analyte	Result	Units	MDL	DSA	EPA
SB-1	10494294002	1,4-Dioxane (SIM)	ND	ug/L	0.086	JS49I48	J-
SB-3	10494294009	1,4-Dioxane (SIM)	ND	ug/L	0.082	JS46I44	J-

VII. **MATRIX SPIKE/MATRIX SPIKE DUPLICATE**

A. Matrix Spike (MS) and Matrix Spike Duplicate (MSD) samples were prepared and analyzed per every 20 samples for every matrix.

Yes__X__No_____

The samples used for MS/MSDs in this set are shown below.

SDG	Method	MS/MSD Parent Sample
10494421	8260B	SB-7
10494421	8270D-SIM	SB-7

10494421	8260B	SB-7 (8-10)

There were other MS/MSDs reported in the data set, but they were associated with other SDGS and are not evaluated.

Yes__X__No_____
Data would be qualified JMS#, where # is the value of the %R. In this case there are no qualifiers required. All MS/MSD recoveries were within the laboratory QC limits.

B. The Matrix Spike Duplicate relative percent differences (RPD) were within the required control limit of less than 30.0% as defined in the QAPP.

Yes__X__No_____

VIII. **LABORATORY CONTROL SAMPLE**

A. Laboratory Control Samples (LCS) were prepared and analyzed at the required frequency.

Yes__X__No_____

B. The LCS percent recoveries were within the required control limits of 60.0 – 130.0% (or 40 LCL for poor responders) as defined in the QAPP.

Yes_____No__X__
Several percent recoveries were outside the project QC limits of 60-130% for chloroethane and one for vinyl chloride, requiring qualification of associated samples as JL#, where # is the outlier recovery. The data could be biased low proportional to the %R.

CLIENT ID	LAB ID	ANALYTE	RESULT	UNITS	MDL	DSA	EPA
SB-1 (6-6.5)	10494294003	Chloroethane	ND	mg/kg	0.026	JL55	J-
SB-2 (6-8)	10494294005	Chloroethane	ND	mg/kg	0.031	JL55	J-
SB-3 (6-8)	10494294008	Chloroethane	ND	mg/kg	0.030	JL55	J-
SB-4 (6-8')	10494294011	Chloroethane	ND	mg/kg	0.027	JL55	J-
SB-5 (6-8)	10494294016	Chloroethane	ND	mg/kg	0.031	JL55	J-
SB-6 (0-1)	10494294019	Chloroethane	ND	mg/kg	0.027	JL55	J-
SB-6 (6-8)	10494294020	Chloroethane	ND	mg/kg	0.030	JL55	J-
DUP100419-C	10494294021	Chloroethane	ND	mg/kg	0.030	JL55	J-
SB-7	10494421001	Vinyl chloride	4.4	ug/L	0.092	JL55	J-

IX. **BLANKS**

A. Method Blanks were prepared and analyzed at the required frequency.

Yes__X__No_____

B. No blank contamination was found in the Method Blank.

Yes__X__No_____
There are no client compounds reported as detected in the method blanks.

C. If Equipment Rinse Blanks, Trip Blanks, or other Field Blanks were identified, no blank contamination was found.

Yes_____No__X__N/A_____

Contamination due to TCE was reported in one trip blank associated with SDG 10494421. One associated sample (SB-7) had a detection of TCE which was less than 5x the trip blank level. The result is qualified as UTB#, as shown below. Data are fully usable as non-detected values.

Client ID	Lab ID	Analyte	Result	Units	MDL	DSA	EPA
SB-7	10494421001	Trichloroethene	2.6	ug/L	0.15	UTB0.79	UB

X. FIELD QC

If Field duplicates or Performance Check Compounds were identified, the results were within the guidance limit of < 50% RPD or the % recovery criteria for the project. If values are less than 5 × RL, the water limit is ±4 x RL.

Yes__X__No_____N/A___

The client has identified field duplicate set as listed in the table below and all are within precision limits:

Sample ID	Field Duplicate ID	Methods
GP-19 (12-14)	DUP082819	8260B
GP-22 (19-21)	DUP083019	8260B
SB-6 (6-8)	DUP100419-C	8260B
SB-4	DUP 100419-A	8260B, 8270D-SIM

Field duplicate criteria were met in all cases.

XI. SYSTEM PERFORMANCE

A. The reconstructed ion chromatograms (RIC), chromatograms, tunes and general system performance were acceptable for all instruments and analytical systems.

Yes__X__No_____N/A_____

For 8260B and 8270D-SIM, most of the chromatograms were relatively clean. The chromatographic quality was within acceptance limits.

B. The suggested EQLs for the sample matrices were met.

Yes__X__No_____N/A_____

XII. TCL COMPOUNDS

A. The identification was accurate, and all retention times, library spectra and RIC were evaluated for all detected compounds.

Yes__X__No_____N/A_____

Where there were detected targets, the match with the library spectra were acceptable and retention times were within limits.

B. Quantitation of representative compounds was checked to determine the accuracy of the calculation algorithm for in each internal standard quantitation set.
Yes__X__No_____N/A_____

XIII. **OVERALL ASSESSMENT OF THE CASE**
The laboratory has complied with the requested method. Data are fully usable and no qualifiers are added.

Deliverables
The following are noted for clarification:
This is a validation review for 10 project-specific compounds by SW-846 Method 8260B and 1 compound (1,4-dioxane) by method 8270D-SIM. Data were provided for 9 solid and 34 aqueous Samples for 8260B which includes 1 solid field duplicates, 3 aqueous field duplicates, 1 methanol solids trip blank, 4 aqueous trip blanks, and 4 rinsate blanks; 9 aqueous samples for 8270D-SIM (1,4-dioxane) including 1 field duplicate and 1 rinsate blank. Hard copy data were not submitted, but the full packages were provided as pdf. Results are incorporated into the associated EDDs. The laboratory reports a full list of volatiles targets but only the client-specified 10 compounds are reviewed.

None of the project reports include a Case Narrative. In addition, the laboratory "qualifier flags" that reflect calibration or other QC issues are not incorporated into the EDDs. This information is lost in the electronic deliverables and must be obtained from the pdf reports.

This is a validation review and includes review of the raw data. The data were validated with a minimum of 10% validated as EPA raw data review. All SDGs are Level IV.

Chain of Custody
For SDG 10494421: The lab reports that there was an extra container of sample SB-7 (8-10), not listed on the COC. There is no discussion about how this was handled.

Note that field duplicate samples do not include times in order to maintain their "blind" status to the laboratory. Dates and times should be recorded in the project field notebooks.

Temperature:
EPA regulations (See Federal Register, March 12, 2007, 40CFR Part 122) require only that the temperature of samples delivered to the laboratory be less than 6^{o} C and all samples intact. For SDG 10489386, the cooler temperature is reported as 17.2^{o} C. However, in this case the samples were received on the same day of sampling in less than 2 hours of the sample time. In this case the samples had not had time to cool prior to delivery to the lab and no qualifiers are required.

pH:
For Method(s) 8260B: All soil samples were properly preserved with methanol and analyzed within 14 days of the collection date. Water samples were properly preserved to pH < 2 and the applicable preservative was used. Preserved water samples must be analyzed within 14 days of the collections date. Improperly preserved water samples must be analyzed within 7 days of the collection dates.

Continuing Calibration
There are two high responses for chloroethane, one on 10/10/2019 associated with SDG 10494294 and one on 10/12/2019 associated with SDG 10494421. Samples impacted by these CCVs show no detection for chloroethane and no qualifiers are required.

Internal Standards
IS Area % recovery summaries were provided and were within criteria for all 8260B analyses. For 8270D-SIM the recovery of the 1,4-Dioxane-d8 internal standard is low in the analytical run used for samples SB-1 and SB-3 in SDG 10494294. Results for these samples are qualified as JI#, where # is the observed recovery.

Surrogates
All surrogate recoveries met criteria for Method 8260B. For Method 8270D-SIM, surrogates were out of limits low in two samples, requiring qualification as JS#, where # is the observed recovery. The data could be biased low proportional to the %R.

Matrix Spikes and MS Duplicates
The samples used for MS/MSDs in this set are shown below.

SDG	Method	MS/MSD Parent Sample
10494421	8260B	SB-7
10494421	8270D-SIM	SB-7
10494421	8260B	SB-7 (8-10)

There were other MS/MSDs reported in the data set, but they were associated with other SDGS and are not evaluated. All MS/MSDs are in control.

Laboratory Control Samples
Several percent recoveries were outside the project QC limits of 60-130% for chloroethane and one for vinyl chloride, requiring qualification of associated samples as JL#, where # is the outlier recovery. The data could be biased low proportional to the %R.

Equipment Rinse Blank, Trip Blanks or other Field Blanks
Contamination due to TCE was reported in one trip blank associated with SDG 10494421. One associated sample (SB-7) had a detection of TCE which was less than 5x the trip blank level. The result is qualified as UTB#. Data are fully usable as non-detected values.

Field Duplicates
The client has identified field duplicate set as listed in the table below and all are within precision limits:

Sample ID	Field Duplicate ID	Methods
GP-19 (12-14)	DUP082819	8260B
GP-22 (19-21)	DUP083019	8260B
SB-6 (6-8)	DUP100419-C	8260B
SB-4	DUP 100419-A	8260B, 8270D-SIM

Compound Identification

Where there were detected targets, the match with the library spectra were acceptable and retention times were within limits.

SUMMARY TABLE OF QUALIFIED DATA

Client ID	Lab ID	Analyte	Result	Units	MDL	DSA	EPA
SB-1	10494294002	1,4-Dioxane (SIM)	ND	ug/L	0.086	JS49I48	J-
