Scanlon Reservoir Feasibility Study Alternatives

**Alternative 1: No action**
- No dredging.
- No depth change.
- No offsite disposal.
- Not protective of human health and the environment.
- $0

**Alternative 2: Enhanced Monitored Natural Recovery with thin layer of amended cover**
- No dredging.
- 1 ft thick layer of sand with carbon amendment over 17 acres.
- 27k cubic yards of sand.
- No offsite disposal.
- Protective of human health and the environment.
- $8.2M

**Alternative 3: Potential Bioactive Zone Cap**
- No dredging.
- Up to 4 ft thick layer of sand cap over 17 acres.
- 88k cubic yards of sand.
- No offsite disposal.
- Protective of human health and the environment.
- $8.5M

**Alternative 4: Sediment Dredging and Excavation**
- Dredging.
- Up to 2.6 feet of sediment removed over 17 acres.
- Thin layer of sand cover.
- Offsite disposal 70K cubic yards.
- Protective of human health and the environment.
- $10.1M

**Alternative 5: Enhanced Monitored Natural Recovery with Broadcast Amendment**
- No dredging.
- 4 inch thin layer of carbon amendment over 17 acres.
- 851 cubic yards of carbon cover.
- No offsite disposal.
- Protective of human health and the environment.
- $3.3M
