1.3 **Waters**1.4 **7050.0130 GENERAL DEFINITIONS.**1.5 [For text of subps 1 and 2, see M.R.]

1.6 Subp. 2a. **Annual average ten-year low flow or 365Q<sub>10</sub>.** "Annual average ten-year  
1.7 low flow" or "365Q<sub>10</sub>" means the lowest average 365-day flow with a once in ten-year  
1.8 recurrence interval. A 365Q<sub>10</sub> is derived using the same methods used to derive a 7Q<sub>10</sub>, and  
1.9 the guidelines regarding period of record for flow data and estimating a 7Q<sub>10</sub> apply equally  
1.10 to determining a 365Q<sub>10</sub>, as described in subpart 3.

1.11 Subp. 2b. **Cultivated wild rice water.** "Cultivated wild rice water" means a contained  
1.12 area where water levels are artificially manipulated for producing wild rice.

1.13 Subp. 2c. **Existing use.** "Existing use" has the meaning given in part 7050.0255,  
1.14 subpart 15.

1.15 [For text of subps 3 to 6, see M.R.]

1.16 Subp. 6a. **Water identification number or WID.** "Water identification number" or  
1.17 "WID" means a unique identifier used by the agency to identify a surface water. For rivers  
1.18 and streams, a WID is an eight-digit hydrologic unit code, followed by three digits that  
1.19 further define the reach of water being identified. For lakes, wetlands, and reservoirs, a  
1.20 WID is a two-digit county identification code, followed by a four-digit unique lake number,  
1.21 followed by a two-digit basin identification code. For purposes of part 7050.0224, a WID  
1.22 identifies a specific water body or reach of a river or stream.

1.23 Subp. 6b. **Wild rice.** "Wild rice" means plants of the species *Zizania palustris* or  
1.24 *Zizania aquatica*.

2.1 Subp. 6c. **Wild rice waters.** "Wild rice waters" means those water bodies that contain  
2.2 natural beds of wild rice as defined by Laws 2011, First Special Session chapter 2, article  
2.3 4, section 32, paragraph (b), and are identified in part 7050.0471. Wild rice waters do not  
2.4 include cultivated wild rice waters.

2.6 **7050.0220 SPECIFIC WATER QUALITY STANDARDS BY ASSOCIATED USE**  
2.7 **CLASSES.**

2.8 Subpart 1. **Purpose and scope.**

2.9 A. The numeric and narrative water quality standards in this chapter prescribe the  
2.10 qualities or properties of the waters of the state that are necessary for the designated public  
2.11 uses and benefits. If the standards in this chapter are exceeded, it is considered indicative  
2.12 of a polluted condition ~~which~~ that is actually or potentially deleterious, harmful, detrimental,  
2.13 or injurious with respect to designated uses or established classes of the waters of the state.

2.14 B. All surface waters are protected for multiple beneficial uses. Numeric water  
2.15 quality standards are tabulated in this part for all uses applicable to four common categories  
2.16 of surface waters; so that ~~all~~ applicable standards for each category are listed together in  
2.17 subparts 3a to 6a. The four categories are:

2.18 ~~A.~~ (1) cold water sport fish (trout waters), also protected for drinking water:  
2.19 classes 1B<sub>2</sub>; 2A<sub>2</sub>; 3A or 3B<sub>2</sub>; 4A and 4B<sub>2</sub>; 4D when applicable to a wild rice water listed in  
2.20 part 7050.0471; and 5 (subpart 3a);

2.21 ~~B.~~ (2) cool and warm water sport fish, also protected for drinking water: classes  
2.22 1B or 1C<sub>2</sub>; 2Bd<sub>2</sub>; 3A or 3B<sub>2</sub>; 4A and 4B<sub>2</sub>; 4D when applicable to a wild rice water listed in  
2.23 part 7050.0471; and 5 (subpart 4a);

3.1 ~~E.~~ (3) cool and warm water sport fish, indigenous aquatic life, and wetlands:  
 3.2 classes 2B, 2C, or 2D; 3A, 3B, 3C, or 3D; 4A and 4B ~~or~~; 4C; 4D when applicable to a wild  
 3.3 rice water listed in part 7050.0471; and 5 (subpart 5a); and

3.4 ~~D.~~ (4) limited resource value waters: classes 3C<sub>2</sub>; 4A and 4B<sub>2</sub>; 4D when applicable  
 3.5 to a wild rice water listed in part 7050.0471; 5<sub>2</sub>; and 7 (subpart 6a).

3.6 [For text of subps 2 and 3, see M.R.]

6.4 **7050.0224 SPECIFIC WATER QUALITY STANDARDS FOR CLASS 4 WATERS**  
 6.5 **OF THE STATE; AGRICULTURE AND WILDLIFE.**

6.6 Subpart 1. **General.** The numeric and narrative water quality standards in this part  
 6.7 prescribe the qualities or properties of the waters of the state that are necessary for the  
 6.8 agriculture and wildlife designated public uses and benefits. ~~Wild rice is an aquatic plant~~  
 6.9 ~~resource found in certain waters within the state. The harvest and use of grains from this~~  
 6.10 ~~plant serve as a food source for wildlife and humans. In recognition of the ecological~~  
 6.11 ~~importance of this resource, and in conjunction with Minnesota Indian tribes, selected wild~~  
 6.12 ~~rice waters have been specifically identified [WR] and listed in part 7050.0470, subpart 1.~~  
 6.13 ~~The quality of these waters and the aquatic habitat necessary to support the propagation and~~  
 6.14 ~~maintenance of wild rice plant species must not be materially impaired or degraded. If the~~  
 6.15 standards in this part are exceeded in waters of the state that have the class 4 designation,  
 6.16 it is considered indicative of a polluted condition ~~which~~ that is actually or potentially  
 6.17 deleterious, harmful, detrimental, or injurious with respect to the designated uses.

6.18 Subp. 2. **Class 4A waters.** The quality of class 4A waters of the state shall be such  
 6.19 as to permit their use for irrigation without significant damage or adverse effects upon any  
 6.20 crops or vegetation usually grown in the waters or area, including truck garden crops. The  
 6.21 following standards shall be used as a guide in determining the suitability of the waters for  
 6.22 such uses, together with the recommendations contained in Handbook 60 published by the  
 6.23 Salinity Laboratory of the United States Department of Agriculture, and any revisions,  
 6.24 amendments, or supplements to it:

7.15 [For text of subs 3 and 4, see M.R.]

7.16 **Subp. 5. Class 4D waters; wild rice waters.**

7.17 A. The standards in items B and C apply to wild rice waters identified in part  
 7.18 7050.0471 to protect the use of the grain of wild rice as a food source for wildlife and  
 7.19 humans. The numeric sulfate standard for wild rice is designed to maintain sulfide  
 7.20 concentrations in pore water at 120 micrograms per liter or less. The commissioner must  
 7.21 maintain all numeric sulfate standards for wild rice waters on a public Web site.

7.22 B. The annual average concentration of sulfate in a wild rice water must not exceed  
 7.23 the concentration established as the calculated sulfate standard under subitem (1) or alternate  
 7.24 sulfate standard under subitem (2) more than one year out of every ten years.

7.25 (1) The calculated sulfate standard, expressed as milligrams of sulfate ion  
 7.26 per liter (mg SO<sub>4</sub><sup>2-</sup>/L), is determined by the following equation:

8.1 iron<sup>1.923</sup>  
 8.2 Calculated sulfate standard = 0.0000121     x     \_\_\_\_\_  
 8.3 organic carbon<sup>1.197</sup>

8.4 Where:

8.5                    (a) organic carbon is the amount of organic matter in dry sediment. The  
 8.6 concentration is expressed as percentage of carbon, as determined using the method for  
 8.7 organic carbon analysis in Sampling and Analytical Methods for Wild Rice Waters, which  
 8.8 is incorporated by reference in item E;

8.9                    (b) iron is the amount of extractable iron in dry sediment. The  
 8.10 concentration is expressed as micrograms of iron per gram of dry sediment, as determined  
 8.11 using the method for extractable iron in Sampling and Analytical Methods for Wild Rice  
 8.12 Waters;

8.13                    (c) sediment samples are collected using the procedures established in  
 8.14 Sampling and Analytical Methods for Wild Rice Waters; and

8.15                    (d) the calculated sulfate standard is the lowest sulfate value resulting  
 8.16 from the application of the equation to each pair of organic carbon and iron values collected  
 8.17 and analyzed in accordance with units (a) to (c).

8.18                    (2) The commissioner may establish an alternate sulfate standard for a wild  
 8.19 rice water when the ambient sulfate concentration is above the calculated sulfate standard  
 8.20 and data demonstrates that sulfide concentrations in pore water are 120 micrograms per  
 8.21 liter or less. Data must be gathered using the procedures specified in Sampling and Analytical  
 8.22 Methods for Wild Rice Waters, which is incorporated by reference in item E. The alternate  
 8.23 sulfate standard established must be either the annual average sulfate concentration in the  
 8.24 ambient water or a level of sulfate the commissioner has determined will maintain the sulfide  
 8.25 concentrations in pore water at or below 120 micrograms per liter.

9.1 C. The commissioner may establish a site-specific sulfate standard using the  
9.2 process in part 7050.0220, subpart 7, or 7052.0270 when the commissioner determines that  
9.3 the beneficial use is not harmed. This decision must be based on reliable and representative  
9.4 data characterizing the health and viability of the wild rice in the wild rice water.

9.5 D. Discharges of sulfate in sewage, industrial waste, or other wastes affecting  
9.6 class 4D waters must be controlled so that the numeric sulfate standard for wild rice is  
9.7 maintained at stream flows that are equal to or greater than 365Q<sub>10</sub>.

9.8 E. Sampling and Analytical Methods for Wild Rice Waters, Minnesota Pollution  
9.9 Control Agency (2017), is incorporated by reference. The document is not subject to frequent  
9.10 change and is available on the agency's Web site at  
9.11 www.pca.state.mn.us/regulations/minnesota-rulemaking and through the Minitex interlibrary  
9.12 loan system.

9.13 Subp. 6. **Class 4D [WR]; selected wild rice waters.** In recognition of the ecological  
9.14 importance of the wild rice resource and in conjunction with Minnesota Indian tribes,  
9.15 selected class 4D wild rice waters have been specifically identified [WR] and listed in part  
9.16 7050.0470, subpart 1. The quality of these waters and the aquatic habitat necessary to support  
9.17 propagation and maintenance of wild rice plant species must not be materially impaired or  
9.18 degraded.

11.18 Subp. 2. **Triennial review.** As part of each triennial review of water-quality standards  
11.19 conducted under Code of Federal Regulations, title 40, section 131.20, the commissioner  
11.20 must solicit evidence that supports identifying additional wild rice waters in rule. The  
11.21 evidence must demonstrate that the wild rice beneficial use exists or has existed on or after  
11.22 November 28, 1975, in the water body, such as by showing a history of human harvest or  
11.23 use of the grain as food for wildlife or by showing that a cumulative total of at least two  
11.24 acres of wild rice are present. Acceptable types of evidence include:

- 12.1 A. written or oral histories that meet the criteria of validity, reliability, and  
 12.2 consistency;
- 12.3 B. written records, such as harvest records;
- 12.4 C. photographs, aerial surveys, or field surveys; or
- 12.5 D. other quantitative or qualitative information that provides a reasonable basis

66.10 [For text of subps 1 and 2, see M.R.]

66.11 Subp. 2a. Annual average ten-year low flow or 365Q<sub>10</sub>. "Annual average ten-year  
 66.12 low flow" or "365Q<sub>10</sub>" has the meaning given in part 7050.0130, subpart 2a.

66.13 [For text of subps 3 to 10, see M.R.]

66.14 **7053.0205 GENERAL REQUIREMENTS FOR DISCHARGES TO WATERS OF**  
 66.15 **THE STATE.**

66.16 [For text of subps 1 to 6, see M.R.]

66.17 **Subp. 7. Minimum stream flow.**

66.18 A. Except as provided in items B and<sub>2</sub> C, and E, discharges of sewage, industrial  
 66.19 waste, or other wastes must be controlled so that the water quality standards are maintained  
 66.20 at all stream flows that are equal to or greater than the 7Q<sub>10</sub> for the critical month or months.

66.21 [For text of items B to D, see M.R.]

66.22 E. Discharges of sulfate in sewage, industrial waste, or other wastes must be  
 66.23 controlled so that the sulfate water-quality standard for wild rice is maintained as specified

67.1 in part 7050.0224, subpart 5. When determining reasonable potential and calculating effluent  
67.2 limits, the flow rate for receiving water is the 365Q<sub>10</sub> flow.

67.3 [For text of subps 8 to 13, see M.R.]

67.4 **7053.0406 REQUIREMENTS FOR FACILITIES DISCHARGING TO WILD RICE**  
67.5 **WATERS.**

67.7 commissioner determines that, based on the location of the discharge in the wild rice water  
67.8 or site-specific hydraulic or substrate conditions, the effluent will not affect the class 4D  
67.9 wild rice beneficial use in the wild rice water, the commissioner must not establish a  
67.10 water-quality-based effluent limitation for the class 4D sulfate in that discharge.

67.11 Subp. 2. **Variances.**

67.12 A. A permit applicant may apply for a variance from the sulfate standard for wild  
67.13 rice and associated water-quality-based effluent limit (WQBEL), as specified in parts  
67.14 7000.7000, 7050.0190, 7052.0280, and 7053.0195, as applicable.

67.15 B. The commissioner must base the determination of widespread economic and  
67.16 social effect on the procedures established in Interim Economic Guidance for Water Quality  
67.17 Standards, EPA-823-B-95-002 (March 1995 and as subsequently amended), which is  
67.18 incorporated by reference, is not subject to frequent change, and is available at  
67.19 <https://www.epa.gov/wqs-tech/economic-guidance-water-quality-standards>.

67.20 C. Publicly owned wastewater treatment plants are exempt from the variance fee  
67.21 requirement under part 7002.0253.

67.22 **REFERENCE CHANGE.** The range reference "7050.0400 to 7050.0470" is changed to
